OF1999-02: Mineral and energy resource assessment of the Washoe County Open Space Plan Amendment Area, Washoe County, Nevada , Annual Report on Mineral Industry Operations in Ontario During Calendar Year ... ,1921 **Energy Research Abstracts** ,1982 *Engineering Geology and Geomorphology of Glaciated and Periglaciated Terrains* J.S. Griffiths,C.J. Martin,2017-10-18 The Engineering Group of the Geological Society Working Party brought together experts in glacial and periglacial geomorphology Quaternary history engineering geology and geotechnical engineering to establish best practice when working in former glaciated and periglaciated environments The Working Party addressed outdated terminology and reviewed the latest academic research to provide an up to date understanding of glaciated and periglaciated terrains This transformative state of the art volume is the outcome of five years of deliberation and synthesis by the Working Party This is an essential reference text for practitioners students and academics working in these challenging ground conditions The narrative style and a comprehensive glossary and photo catalogue of active and relict sediments structures and landforms make this material relevant and accessible to a wide readership Minerals Yearbook ,2006 Surface Mining Operations in Oil Sands C. A. Poveda,M. G. Lipsett,2014-07-23 The creation of the World Commission on Environment and Development WCED commonly known as the Brundtland Commission and the publication in 1987 of its report *Our Common Future* marked a turning point towards finding the balance among society economy and environment Since then governments have improved regulations new standards have been developed management and process practices have addressed potential gaps public and private organisations have taken initiative through the creation of committees and programs and research covering all areas of sustainable development has become a priority for academics and practitioners These different sources serve as the basis for a pre selection process of sustainable development indicators SDIs While some sources do not specifically address certain industries the pre selection process suggested in this book studies and analyses each SDI s resource and the possible applicability of already identified indicators An assertive set of SDIs is not solely based on regulatory systems as measuring sustainability cannot become a bureaucratic process and neither can any other SDI s source single handedly determine or mandate the final set of indicators as the real objective is to assist decision makers and effectively engage stakeholders This book presents an analysis of six different sources for pre selecting SDIs accompanied by a methodology to then finalise with a set of SDIs for the surface mining operations in oil sands projects

Surface mining projects are complex operations with several social economic environmental and health impacts As the government and oil sands developers are turning towards increasing productivity with a more conscious sustainable development approach a pre selection of SDIs is required to assist further formal multi criteria selection processes
