Mounting Lenses In Optical Instruments Tutorial Texts In Optical Engineering Vol 21:

Mounting Lenses in Optical Instruments Paul R. Yoder, 1995 This Tutorial Text is intended for practitioners in the fields of optical engineering and optomechanical design It provides a comprehensive examination of the different ways in which lenses typically are mounted in optical instruments of the advantages and disadvantages of various mounting arrangements and of the analytical tools that can be used to evaluate and compare different designs Each section contains an illustrated discussion of the technology involved and one or more practical examples where feasible Optical Engineering Fundamentals Bruce H. Walker, 1998 This text aims to expose students to the science of optics and optical engineering without the complications of advanced physics and mathematical theory *Design and Mounting of Prisms and Small Mirrors in Optical Instruments* Paul R. Yoder, 1998 This text examines the various ways in which prisms and small mirrors typically are designed and mounted in optical instruments It provides analytical tools for evaluating different designs and discusses the advantages and disadvantages of various techniques The book in part is an outgrowth of SPIE short courses taught by the author and is a companion to his 1995 volume Mounting Lenses in Optical Instruments The work should be useful for engineers and other practitioners in the fields of optical engineering and optomechanical design Introduction to Optical Testing Joseph M. Geary, 1993 This volume in the SPIE Tutorial Text series presents a practical approach to optical testing with emphasis on techniques procedures and instrumentation rather than mathematical analysis The author provides the reader with a basic understanding of the measurements made and the tools used to make those measurements Detailed information is given on how to measure and characterize imaging systems perform optical bench measurements to determine first and third order properties of optical systems set up and operate a Fizeau interferometer and evaluate fringe data conduct beam diagnostics such as wavefront sensing and perform radiometric calibrations **Modulation Transfer Function in Optical and Electro-optical Systems** Glenn D. Boreman, 2001 This tutorial introduces the theory and applications of MTF used to specify the image quality achieved by an imaging system It covers basic linear systems theory and the relationship between impulse response resolution MTF OTF PTF and CTF Practical measurement and testing issues are discussed *Hands-on Morphological Image Processing* Edward R. Dougherty, Roberto A. Lotufo, 2003 Morphological image processing a standard part of the imaging scientist's toolbox can be applied to a wide range of industrial applications Concentrating on applications this text shows how to analyse the problems and then develop successful algorithms to solve them *Introduction to Adaptive Optics* Robert K. Tyson, 2000 Adaptive optics systems and components have achieved a level of sophistication and simplicity that goes beyond traditional applications in astronomy and the military and into developments in medicine manufacturing and communications This book was written for those interested in the multidisciplinary technology and those who need a broad brush explanation without wading through thousands of journal articles It follows the structure of a one day tutorial taught by the author including humor and sidebars of historical material

Analysis of Sampled Imaging Systems Richard H. Vollmerhausen, Ronald G. Driggers, 2000 Advances in solid state detector arrays flat panel displays and digital image processing have prompted an increasing variety of sampled imaging products and possibilities These technology developments provide new opportunities and problems for the design engineer and system analyst this tutorial s intended reader *An Engineering Introduction to Biotechnology* J. Patrick Fitch, 2002 This tutorial will help technical professionals in optics determine whether their technologies have potential application in the life sciences It also is useful as a prep class for more detailed books on biology and biotechnology filling the gap between fundamental and high level approaches Fourier Transform Spectroscopy Instrumentation Engineering Vidi Saptari, 2004 Many applications today require the Fourier transform FT spectrometer to perform close to its limitations such as taking many quantitative measurements in the visible and in the near infrared wavelength regions In such cases the instrument should not be considered as a perfect black box Knowing where the limitations of performance arise and which components must be improved are crucial to obtaining repeatable and accurate results One of the objectives of this book is to help the user identify the instrument s bottleneck *Optical Design for Visual Systems* Bruce H. Walker, 2000 This tutorial explains the human eye its function and performance limits from the perspective of an experienced optical engineer and lens designer It is concise and readable with examples and data and is intended for students practicing engineers and technology users

Optical Engineering , 1998 **Introduction to Radiometry** William L. Wolfe, 1998 Radiometry is an essential part of the optical design of virtually every optical instrument and key to many applications It is also used to measure the radiation of various objects This tutorial examines both the techniques of calculating radiative transfer and the measurement of fluxes and radiometric properties of various sorts **Fundamentals of Contamination Control** Alan C. Tribble, 2000 This Tutorial Text provides a comprehensive introduction to the subject of contamination control with specific applications to the aerospace industry The author draws upon his many years as a practicing contamination control engineer researcher and teacher The book examines methods to quantify the cleanliness level required by various contamination sensitive surfaces and to predict the end of life contamination level for those surfaces and it identifies contamination control techniques required to ensure mission success **Digital Image Compression Techniques** Majid Rabbani, Paul W. Jones, 1991 In order to utilize digital images effectively specific techniques are needed to reduce the number of bits required for their representation This Tutorial Text provides the groundwork for understanding these image compression techniques and presents a number of different schemes that have proven useful The algorithms discussed in this book are concerned mainly with the compression of still frame continuous tone monochrome and color images but some of the techniques such as arithmetic coding have found widespread use in the compression of bilevel images Both lossless bit preserving and lossy techniques are considered A detailed description of the compression algorithm proposed as the world standard the JPEG baseline algorithm is provided The book contains approximately 30 pages of reconstructed and error images illustrating the

effect of each compression technique on a consistent image set thus allowing for a direct comparison of bit rates and reconstructed image quality For each algorithm issues such as quality vs bit rate implementation complexity and susceptibility to channel errors are considered

Lithography Process Control Harry J. Levinson,1999 This text covers lithography process control at several levels from fundamental through advanced topics The book is a self contained tutorial that works both as an introduction to the technology and as a reference for the experienced lithographer It reviews the foundations of statistical process control as background for advanced topics such as complex processes and feedback In addition it presents control methodologies that may be applied to process development pilot lines

Optical Design Fundamentals for Infrared Systems Max J. Riedl,2001 The practical popular 1995 tutorial has been thoroughly revised and updated reflecting developments in technology and applications during the past decade New chapters address wave aberrations thermal effects design examples and diamond turning

Integrated Optomechanical Analysis Keith B. Doyle,Victor L. Genberg,Gregory J. Michels,2002 This tutorial presents optomechanical modeling techniques to effectively design and analyze high performance optical systems It discusses thermal and structural modeling methods that use finite element analysis to predict the integrity and performance of optical elements and optical support structures Includes accompanying CD ROM with examples

Fundamentals of Machine Vision Harley R. Myler,1999 This text is intended to help readers understand and construct machine vision systems that perform useful tasks based on the state of the art It covers fundamentals drawn from image processing and computer graphics to the methods of applied machine vision techniques The text is useful as a short course supplement as a self study guide or as a primary or supplementary text in an advanced undergraduate or graduate course

Infrared Optics and Zoom Lenses Allen Mann,2000 This Tutorial Text is an outgrowth of the author s short course of the same title It is intended as an introduction to readers unfamiliar with infrared zoom lenses and as an aid to the practising engineer pursuing a related application The first three chapters introduce the principles of optics and the unique aspects of the infrared region of the wavelength spectrum with related optical design techniques addressed in Chapter 4 Chapters 5 through 8 present material unique to the subject of zoom lenses in the infrared The appendix contains three landmark infrared zoom lens patents in their entirety providing lens prescription data and a starting point for future design activity in addition to the author s computer analysis of the three patents
