

**1.8 Ratios, Rates and Percentages**

- **ratio:** a comparison between two numbers that may or may not have units (*Ex.  $a:b$  or  $\frac{a}{b}$* )  
There are two types of ratios:  
Part-to-part ratios is where you compare the amount of one thing to the amount of another.  
*An example would be if a recipe calls for 3 cups of flour for every 2 cups of milk.*  
Part-to-whole ratios is where you compare the amount of something to the total.  
*An example would be comparing the number of girls to the full class of students.*
- **percentage:** a ratio with a second term of 100 expressed using the symbol %.  
(*Ex. 30% means 30 out of 100*); can be represented by a fraction with a denominator of 100.  
(*Ex.  $30\% = \frac{30}{100}$* )
- **proportion:** the equivalence of two or more ratios. (*Ex.  $\frac{1}{2} = \frac{2}{4}$* )
- **rate:** a comparison between two numbers that have different units. (*Ex. Speed 60km/h or 2 miles/20 minutes*)
- **unit rate:** a rate where the second unit is equal to one. (*Ex. Speed limits: 80km per one hour*)

**Percentages:**

1. Express each of the following as a percentage.

a) $\frac{32}{50}$	b) $\frac{18}{23}$	c) $\frac{19}{30}$

2. Determine the value of each of the following:

a) 25% of 40	b) 7% of 300	c) 35.4% of 220

3. A computer that has a regular price of \$895.99 is on sale for 20% off.

a) Determine the price of the computer after the discount is applied (excluding tax).	b) Determine the cost of the discounted computer after tax (13% HST).
	To find the amount of tax ONLY, we multiply by $\frac{13}{100} = 0.13$ To find the TOTAL cost with tax, we multiply by 1.13

**Rates:**4. How would you express each as a **unit rate**?

a) 70 cm of snow in 9 hours

b) \$1.95 for 5 folders

their correct ones because it is the gap in their understanding today that holds the secrets to planning tomorrow's best teaching. The authors lay out 180 high quality tasks aligned to the standards and big ideas of Grades 6-8 mathematics including number systems, integers, ratio and proportion, equations and expressions, geometry, and statistics and probability. The tasks are all downloadable so you can use or modify them for instruction and assessment. Each big idea offers a starting task followed by what makes it a high quality task, what you might anticipate before students work with the task, four student examples of the completed task showcasing a distinct gap, commentary on what precisely counts for mathematical understanding, and the next instructional steps, commentary on the misconception or incomplete understanding so you learn why the student veered off course. Three additional tasks aligned to the mathematics topic and ideas about what students might do with these additional tasks. It's time to break our habit of rushing into re-teaching for correctness and instead get curious about the space between right and wrong answers. Mine the Gap for Mathematical Understanding is a book you will return to again and again to get better at selecting tasks that will uncover students reasoning better at discerning the quality and clarity of students understanding and better at planning teaching based on the gaps you see. *Mathematics 2005 performance in Puerto Rico, focus on the content areas*, *Making Sense of Numbers* Jane E. Miller, 2021-08-30. Making Sense of Numbers teaches students the skills they need to be both consumers and producers of quantitative research, able to read about, collect, calculate, and communicate numeric information for both everyday tasks and school or work assignments. The text teaches how to avoid making common errors of reasoning, calculation, or interpretation by introducing a systematic approach to working with numbers, showing students how to figure out what a particular number means. The text also demonstrates why it is important to apply a healthy dose of skepticism to the numbers we all encounter so that we can understand how those numbers can and cannot be interpreted in their real world context. Jane E. Miller uses annotated examples on a wide variety of topics to illustrate how to use new terms, concepts, and approaches to working with numbers. End of chapter engagement activities designed based on Miller's three decades of teaching experience can be used in class or as homework assignments, with some for students to do individually and others intended for group discussion. The book is ideally suited for a range of courses including quantitative reasoning, research methods, basic statistics, data analysis, and communicating quantitative information. An instructor website for the book includes a test bank, editable PowerPoint slides, and tables and figures from the book. *Native Education With A Different Purpose* Nisheducator, 2010-11.
