Number Sense:

The Number Sense Stanislas Dehaene, 2011-04-29 Our understanding of how the human brain performs mathematical calculations is far from complete In *The Number Sense* Stanislas Dehaene offers readers an enlightening exploration of the mathematical mind Using research showing that human infants have a rudimentary number sense Dehaene suggests that this sense is as basic as our perception of color and that it is wired into the brain But how then did we leap from this basic number ability to trigonometry calculus and beyond Dehaene shows that it was the invention of symbolic systems of numerals that started us on the climb to higher mathematics Tracing the history of numbers we learn that in early times people indicated numbers by pointing to part of their bodies and how Roman numerals were replaced by modern numbers On the way we also discover many fascinating facts for example because Chinese names for numbers are short Chinese people can remember up to nine or ten digits at a time while English speaking people can only remember seven A fascinating look at the crossroads where numbers and neurons intersect *The Number Sense* offers an intriguing tour of how the structure of the brain shapes our mathematical abilities and how math can open up a window on the human mind Provided by publisher

Number Sense Routines Jessica F. Shumway, 2011 Just as athletes stretch their muscles before every game and musicians play scales to keep their technique in tune mathematical thinkers and problem solvers can benefit from daily warm up exercises Jessica Shumway has developed a series of routines designed to help young students internalize and deepen their facility with numbers The daily use of these quick five ten or fifteen minute experiences at the beginning of math class will help build students number sense Students with strong number sense understand numbers ways to represent numbers relationships among numbers and number systems They make reasonable estimates compute fluently use reasoning strategies e g relate operations such as addition and subtraction to each other and use visual models based on their number sense to solve problems Students who never develop strong number sense will struggle with nearly all mathematical strands from measurement and geometry to data and equations In *Number Sense Routines* Jessica shows that number sense can be taught to all students Dozens of classroom examples including conversations among students engaging in number sense routines illustrate how the routines work how children s number sense develops and how to implement responsive routines Additionally teachers will gain a deeper understanding of the underlying math the big ideas skills and strategies children learn as they develop numerical literacy

It Makes Sense! resource that empowers students by helping them understand and utilize the fundamentals of mathematics. Highly creative story problems spark curiosity and help students appreciate math as a powerful tool for solving real life questions. In Book 1 of the series Number Sense students will explore various forms of numbers including integers, fractions, decimals, and percents. They will learn to compare different types of numbers and to use them in various kinds of computations. Number Sense is divided into three useful sections. Review Sheets contain easy to understand definitions and examples that clearly explain particular concepts such as Adding Fractions. In addition to providing valuable practice exercises, the sheets can also serve as handy reference guides. Skill Builder Sheets present intriguing story problems that use humor, creativity, and mystery to engage students. Each sheet covers a specific concept which is clearly labeled at the top of the page. Extra Practice Sheets are designed to add an additional challenge for students who have mastered the previous sheets. In addition to the basic concepts, students must use additional skills such as measurement, conversion, chart analysis, and selection of the most appropriate number form. These sheets give teachers the extra flexibility to tailor lessons based on grade level and ability. Learning Objectives: Number Sense was designed to help instructors implement the National Council of Teachers of Mathematics Curriculum and Evaluation Standards. Aimed at students in grades 4 through 8, the sheets will help students meet the following specific objectives: understanding various ways to represent numbers including fractions, decimals, and percents; comparing various types of numbers and understanding their relationships; representing, comparing, and ordering integers; computing with fractions, decimals, and percents; working with mixed numbers and improper fractions; utilizing factors and multiples to solve problems; rounding various types of numbers including decimals and percents; finding appropriate forms for fractions, decimals, and percents in problem solving; connecting math to the world outside the classroom; using investigation and reasoning to solve problems. Grades 4-7 **Teaching Number Facts Using a Number Sense**
