Biochemical and Nutritional Changes during Food Processing and Storage Vibeke Orlien,Tomas Bolumar,2020-11-18 Food processing by humans goes a long way back in time e g heat for cooking was used 1 9 million years ago However meal preparation now seems to be moving out of the home kitchen and preprocessed or processed convenience food products are becoming a larger part of the daily diet In addition consumers are progressively focusing on the impact of food on their health and they demand foods that have a high nutritional quality and an aroma and natural flavor that are similar to freshly made products Therefore nutritional quality is concurrent with food safety and sensory perception is becoming an increasingly important factor in food choices The human digestive tract disintegrates food to allow the nutrients to be released and made available to the body However nutrients can undergo unwanted degradation upon processing and subsequent storage negatively influencing the physiological effects Different processing techniques will result in different food structures thereby also affecting bioaccessibility and nutritional value Hence food scientists and industry have an increased interest in both conventional and innovative processing methods that can provide good quality products with high nutritional value and stable shelf life This Special Issue aims to shed some light on the latest knowledge about and developments within the effects of food processing and storage on changes of biochemical and nutritional compounds Both original research articles and reviews are included in this book

Air Pollution by Photochemical Oxidants Robert Guderian,2012-12-06 Photochemical oxidants are secondary air pollutants formed under the influence of sunlight by complex photochemical reactions in air which contains nitrogen oxides and reactive hydrocarbons as precursors The most

adverse components formed by photochemical reactions in polluted air are ozone O_3 and peroxyacetyl nitrate PAN among many other products such as aldehydes ketones organic and inorganic acids nitrates sulfates etc An analysis and evaluation of the available knowledge has been used to characterize the relationships among emissions ambient air concentrations and effects and to identify the important controlling influences on the formation and effects of photochemical oxidants The biological activity of photochemical oxidants was first clearly manifested during the early 1940 s when vegetation injury was observed in the Los Angeles Basin in the United States Since that time as a consequence of the increasing emissions of photochemical oxidant precursors the photochemical oxidants have become the most important air pollutants in North America In other parts of the world for example South and Central America Asia and Australia photo chemical oxidants threaten vegetation particularly the economic and ecological performance of plant life According to my knowledge the first observations of ozone and PAN injury to vegetation in Europe were made by Dr Ellis F Darley Statewide Air Pollution Research Center University of California Riverside California during a study visit 1963 64 to the Federal Republic of Germany

Perioperative Medicine - Current Controversies Karen Stuart-Smith, 2016-03-08 This book addresses those aspects of anaesthetic practice in perioperative medicine which have a significant impact on both the immediate and the long term outcome for the surgical patient Perioperative Medicine is the natural evolution of anaesthesia from a main focus on the patient in the operating room to a responsibility for the care of the patient from the time that the decision to operate is made through to discharge from hospital The contributors well respected authors in their field discuss the role of the perioperative medicine specialist in areas ranging from pre operative assessment and physiological optimization via pre habilitation to intra operative anaesthetic management and post operative care Controversial topics discussed include fluid therapy anaesthesia and cancer outcomes pharmacological management of cardiac risk and the evolution of acute to chronic pain Developments in regional anaesthesia quality of recovery scoring and lung ultrasound are described It is hoped that the chapters contained in this book will help to define the nascent specialty that is Perioperative Medicine and encourage further debate research and expansion of this vital new frontier in anaesthetic care
