Nutritional Management Of Diabetes Mellitus:

Nutritional Management of Diabetes Mellitus Gary Frost, Anne Dornhorst, Robert Moses, 2003-11-04 Diabetes mellitus is a common disorder where the body is no longer able to regulate blood glucose levels correctly owing to defects in insulin secretion or action. While some people require treatment with insulin, many are able to control their diabetes through management of diet e.g. by decreasing the fat intake and increasing the amount of fibre. This book provides an up to date review of the dietary management of diabetes looking at general topics such as the metabolic principles of nutrition as well as more specific topics such as nutritional management of diabetic children, pregnant women and the elderly. A specialist text on the nutritional management of diabetes. A practical book useful in clinical practice. Written by well respected clinicians within the field. *Handbook of Diabetes Nutritional Management* Margaret A. Powers (RD.), 1987. Here is solid practical advice with information on classification systems and diagnostic criteria, management techniques, step by step instructions for glucose testing, exchange system guidelines, dietary and soluble and insoluble fiber values for foods, detailed information on carbohydrate's influence on blood glucose and more. Included are tables, charts, graphs, diagrams and practice aids.

Over the next decade the global number of people with diabetes and at risk of diabetes and cardiovascular disease is expected to grow by 25% largely driven by the rising prevalence of obesity and inactivity. The problem is especially serious in Asia where the WHO predicts that in less than a decade 60% of the worldwide population with diabetes will be found. In order to avoid that the disease turns into a huge economic burden, individuals at risk must be identified and prevention and suitable treatment interventions implemented. Conceding that the optimal diet for diabetes has yet to be defined and that nutrition and lifestyle management must be individualized to enhance the potential for a successful outcome, this publication examines the impact of lifestyle which includes both nutritional management and physical activity in the prevention and treatment of diabetes. Among the topics addressed are the dysmetabolic syndrome, glycemic effect of carbohydrates, glycemic control and beyond diabetes in the life cycle as well as the role of drugs and dietary therapy. Written by leading experts in the field, the papers collected in this publication contain a wealth of information for nutritionists.
