Pioneer Plastic The Making And Selling Of Celluloid:

Pioneer Plastic Robert D. Friedel,1983-06-01 In 1869 an Albany printer discovered how to mix nitrocellulose with camphor under high pressure to yield a hard shiny moldable substance which he and his brother called celluloid This discovery was the dawn of the Plastics Age but it represented only the first step in establishing a new technology Examines the 20 years of laboratory trial and error that produced the first artificial plastic as well as the equally difficult challenge of selling the product to a public that wasn't sure what to use it for He shows how the struggle to find uses for the new material and to create markets for it was as significant as solving the problems of making it Illustrated *Pioneer Plastic* Robert Douglas Friedel,1983 In 1869 an Albany printer discovered how to mix nitrocellulose with camphor under high pressure to yield a hard shiny moldable substance which he and his brother called celluloid This discovery was the dawn of the Plastics Age but it represented only the first step in establishing a new technology Examines the 20 years of laboratory trial and error that produced the first artificial plastic as well as the equally difficult challenge of selling the product to a public that wasn't sure what to use it for He shows how the struggle to find uses for the new material and to create markets for it was as significant as solving the problems of making it Illustrated The Routledge Companion to Media Technology and Obsolescence Mark Wolf,2018-11-21 While so many books on technology look at new advances and digital technologies The Routledge Companion to Media Technology and Obsolescence looks back at analog technologies that are disappearing considering their demise and what it says about media history pop culture and the nature of nostalgia From card catalogs and typewriters to stock tickers and cathode ray tubes contributors examine the legacy of analog technologies including those like vinyl records that may be experiencing a resurgency Each essay includes a brief history of the technology leading up to its peak an analysis of the reasons for its decline and a discussion of its influence on newer technologies The Routledge Companion to Design Studies Penny Sparke,Fiona Fisher,2016-06-17 Since the 1990s in response to dramatic transformations in the worlds of technology and the economy design a once relatively definable discipline complete with a set of sub disciplines has become unrecognizable Consequently design scholars have begun to address new issues themes and sub disciplines such as sustainable design design for well being empathic design design activism design anthropology and many more The Routledge Companion to Design Studies charts this new expanded spectrum and embraces the wide range of scholarship relating to design theoretical practice related and historical that has emerged over the last four decades Comprised of forty three newly commissioned essays the Companion is organized into the following six sections Defining Design Discipline Process Defining Design Objects Spaces Designing Identities Gender Sexuality Age Nation Designing Society Empathy Responsibility Consumption the Everyday Design and Politics Activism Intervention Regulation Designing the World Globalization Transnationalism Translation Contributors include both established and emerging scholars and the essays offer an international scope covering work emanating from and relating to design in the United Kingdom mainland

Chemistry in America 1876-1976 A. Thackray, J.L. Sturchio, P.T. Carroll, R.F. Bud, 2012-12-06 This study is an outgrowth of our interest in the history of modern chemistry The paucity of reliable quantitative knowledge about past science was brought home forcibly to us when we undertook a research seminar in the comparative history of modern chemistry in Britain Germany and the United States That seminar which took place at the University of Pennsylvania in the spring of 1975 was paralleled by one devoted to the work of the Annales School The two seminars together catalyzed the attempt to construct historical measures of change in aspects of one science or chemical indicators The present volume displays our results Perhaps our labors may be most usefully compared with the work of those students of medieval science who devote their best efforts to the establishment of texts Only when acceptable texts have been constructed from fragmentary and corrupt sources can scholars move on to the more satisfying business of making history So too in the modern period a necessary preliminary to the full history of any scientific profession is the establishing of reliable quantitative information in the form of statistical series This volume does not offer history Instead it provides certain element indicators that may be useful to individuals interested in the history of American chemistry and chemical industry and suggestive for policy

Giant Molecules Walter Gratzer, 2011-05-26 Macromolecules are a fascinating group of molecules with some remarkable properties many of which are only just being discovered and exploited by science Walter Gratzer explores their history structure and properties from DNA to polymers to their cutting edge uses in nanoarrays and biomimetics *Tales of Militant Chemistry* Alice Lovejoy, 2025-08-26 The untold story of film as a chemical cousin to poison gas and nuclear weapons shaped by centuries of violent extraction The history of film calls to mind unforgettable photographs famous directors and the glitz and hustle of the media business But there is another tale to tell that connects film as a material to the twentieth century's history of war destruction and cruelty This story comes into focus during World War II at the factories of Tennessee Eastman where photographic giant Kodak produced the rudiments of movie magic Not far away at Oak Ridge Kodak was also enriching uranium for the Manhattan Project uranium mined in the Belgian Congo and destined for the bomb that fell on Hiroshima While the world's largest film manufacturer transformed into a formidable military contractor across the ocean its competitor Agfa grew entangled with Nazi Germany's machinery of war After 1945 Kodak's film factories stood at the front lines of a new colder war as their photosensitive products became harbingers of the dangers of nuclear fallout Following scientists soldiers prisoners and spies through Kodak's and Agfa's global empires Alice Lovejoy links the golden age of cinema and photography to colonialism the military industrial complex radioactive dust and toxic waste Revelatory and chilling *Tales of Militant Chemistry* shows how film became a weapon whose chemistry irrevocably shaped the world we live in today Chemistry Bernadette Bensaude-Vincent, Jonathan Simon, 2008 A presentation of the history and philosophy of chemistry It introduces the reader to various themes in the domain and argues for a thesis chemistry is not reducible to physics but rather needs its own philosophy that reflects its practical engagement with the material world **Mega Molecules** Hans-Georg Elias, 2013-06-29 All life is based on big molecules scientifically called macromolecules Humans animals and plants cease to exist without these structural reserve and transport molecules No life can be propagated without macromolecular DNA and RNA Without macromolecules we would only dine on water sugars fats vitamins and salts but had to relinquish meat eggs cereals vegetables and fruits We would not live in houses since wood and many stones consist of macromolecules Without macromolecules no clothes since all fibers are made from macromolecules No present day car could run All tires are based on macromolecules Without macromolecules no photographic films no electronics If macromolecules are so important then why is commonly so little known about their roles and why are they so little mentioned in school if at all As often in human history tradition is important and science makes no exception Chemistry was established as the chemistry of low molecular weight compounds since these were most easy to investigate characterize and convert A beautiful tower of thought was erected by the chemical sciences long before the idea of giant molecules macromolecules took hold There was no space for newcomers in this tower Even today one can learn about chemistry without hearing a word about macromolecules **A World History of Rubber** Stephen L. Harp, 2015-12-21 A World

History of Rubber helps readers understand and gain new insights into the social and cultural contexts of global production and consumption from the nineteenth century to today through the fascinating story of one commodity Divides the coverage into themes of race migration and labor gender on plantations and in factories demand and everyday consumption World Wars and nationalism and resistance and independence Highlights the interrelatedness of our world long before the age of globalization and the global social inequalities that persist today Discusses key concepts of the nineteenth and twentieth centuries including imperialism industrialization racism and inequality through the lens of rubber Provides an engaging and accessible narrative for all levels that is filled with archival research illustrations and maps

Inventive Minds Robert John Weber, David N. Perkins, 1992 Is invention really 99 percent perspiration and one percent inspiration as Thomas Edison assured us *Inventive Minds* assembles a group of authors well equipped to address this question contemporary inventors of important new technologies historians of science and industry and cognitive psychologists interested in the process of creativity In telling their stories the inventors describe the origins of such remarkable devices as ultrasound the electron microscope and artificial diamonds The historians help us look into the minds of innovators like Thomas Edison Alexander Graham Bell Michael Faraday and the Wright brothers drawing on original notebooks and other sources to show how they made their key discoveries Finally cognitive psychologists explore the mental processes that figure in creative thinking Contributing to the authors insight is their special focus on the front end of invention where ideas come from and how they are transformed into physical prototypes They answer three questions How does invention happen How does invention contrast with other commonly creative pursuits such as scientific inquiry musical composition or painting And how might invention best happen that is what kinds of settings conditions and strategies appear to foster inventive activity The book yields a wealth of information that will make absorbing reading for cognitive and social psychologists social historians and many working scientists and general readers who are interested in the psychology of personality and the roots of ingenuity

The Basic Environmental History Mauro Agnoletti, Simone Neri Serneri, 2014-10-15 This book is an introductory instrument to the main themes of environmental history illustrating its development over time methodological implications results achieved and those still under discussion But the overriding aspiration is to show that the doubts methods and knowledge elaborated by environmental history have a heuristic value that is far from negligible precisely in its attitude to the most consolidated major historiography For this reason this book gives an overview of environmental history as it is an essential component of the basic knowledge of global history At the same time it introduces specific aspects which are useful both for anyone wanting to deepen his/her studies of environmental historiography and for those interested in one of the many disciplinary areas from rural history to urban history from the history of technology to the history of public health etc with which environmental history develops a dialogue

Victorian Fashion Accessories Ariel Beaujot, 2013-08-15 In Victorian England women's accessories were always much more than incidental finishing touches to their elaborate dress

Accessories helped women to fashion their identities Victorian Fashion Accessories explores how women's use of gloves parasols fans and vanity sets revealed their class gender and colonial aspirations The colour and fit of a pair of gloves could help a middle class woman indicate her class aspirations The sun filtering through a rose colored parasol would provide a woman of a certain age with the glow of youth The use of a fan was a socially acceptable means of attracting interest and flirting Even the choice of vanity set on a woman's bedroom dresser reflected her complicity with colonial expansion By paying attention to the particular details of women's accessories we discover the beliefs embedded in these artefacts and enhance our understanding of the culture at large Beaujot's engaging prose illuminates the complex identities of the women who used accessories in the Victorian culture that created and consumed them Victorian Fashion Accessories is essential reading for students and scholars of history gender studies cultural studies material culture and fashion studies as well as anyone interested in the history of dress
