Edwards, 2008-01-08 Hype hope or horror A vivid look at nanotechnology written by an insider and experienced science writer The variety of new products and technologies that will spin out of nanoscience is limited only by the imagination of the scientists engineers and entrepreneurs drawn to this new field Steve Edwards concentrates on the reader's self interest no military gadgets wild fantasies of horror nanobot predators and other sci fi stuff but presents a realistic view of how this new field of technology will affect people in the near future He is in close contact with many pioneers in nanotechnology and includes their backgrounds to allow readers especially college students considering a career in the field to better imagine themselves in such positions However technology does not develop in a vacuum and this book also looks at the social political and economic changes attendant upon the development of nanotechnology For the science interested general public as well as chemists students lecturers chemical organizations materials scientists journalists politicians industry physicists and biologists      *CLIMATE CHANGE and the road to NET-ZERO* Mathew Hampshire-Waugh, 2021-06-01 CLIMATE CHANGE and the road to NET ZERO is a story of how humanity has broken free from the shackles of poverty suffering and war and for the first time in human history grown both population and prosperity It's also a story of how a single species has reconfigured the natural world repurposed the Earth's resources and begun to re-engineer the climate The book uses these conflicting narratives to explore the science economics technology and politics of climate change NET ZERO blows away the entrenched idea that solving global warming requires a trade off between the economy and environment present and future generations or rich and poor and reveals why a twenty year transition to a zero carbon system is a win win solution for all on planet Earth Reviews Readers Favorite Five Stars An excellent layman's perspective of the climate problem today how it has evolved over time and the different approaches to solving the problem I recommend it highly Mark Z Jacobson Professor of Civil and Environmental Engineering at Stanford University and author of 100% Clean Renewable Energy and Storage for Everything Mathew brings his wide ranging experience of financial markets particularly in modelling and forecasting to add a unique insight to the climate challenge On one hand helping us understand how fossil fuels drove prosperity and let the world's population escape the poverty trap whilst on the other how rising levels of CO2 in the atmosphere placed the world at mortal risk In this book Mathew's financial understanding comes to the fore revealing why we need a sound understanding of economics climate science and financial modelling to give us the signals we need to act today Mark Campanale Executive Chairman of the Carbon Tracker Initiative and founder of the unburnable carbon capital markets thesis Provides a clear understanding of the technical complexities of reaching zero carbon Hampshire Waugh approaches the subject with intellectual rigour boundless curiosity and compelling story telling A must read for anyone interested in climate change and net zero Vincent Gilles Chief Investment Officer at Clim8 Invest The book that says it all and answers all questions Backed by data analysis and science Hampshire Waugh explains how climate change if left unchecked threatens to unravel 200 years of human progress But it

need not end this way The author shows that building a net zero carbon economy is within human reach through focused innovation riding down the experience curve and reaching scale in clean energy technologies and solutions Mathew shows how we can solve climate change and air pollution whilst driving development in the poorest parts of the world and without compromise for those already accustomed to the highest quality of life Geetu Sharma Founder of AlphasFuture LLC a sustainability focused investment business About the Author Dr Mathew Hampshire Waugh has spent the last decade working as an equity analyst at a global investment bank He has worked with the top executives of many multi billion dollar companies and built relationships with many of the world s largest investment managers Mathew s work centred on forecasting technology trends financial performance and the intrinsic value of companies involved in markets including renewable energy electric cars battery technology and biofuels Prior to his career in the banking industry the author gained his doctorate in materials chemistry from University College London where he worked on novel coatings and nano materials for use in energy saving glazing and solar panel design During his doctorate Mathew registered a patent for an efficiency enhancing coating for solar modules published numerous scientific papers and engaged in public speaking consultancy and media outreach From the Author I wrote Climate Change and the road to Net Zero to provide a generalist reader with a clear comprehensive and objective take on the issues surrounding climate change and air pollution The book walks the reader through a history of energy innovation and the rise of human civilisation how scientists have come to understand our past climate and can now forecast future change the problems economists encounter as they attempt to piece together the potential monetary and social damages from climate inaction and a technology agnostic assessment of potential climate change solutions from climate engineering to mitigation including their costs risks and limitations The book demonstrates why sustainable technologies such as wind solar and batteries get cheaper with scale of production not time and why a rapid transition to a fully fledged net zero system will end up significantly cheaper than remaining bound to fossil fuels whilst also avoiding the worst impacts of climate change and preventing nearly eight million premature deaths each year from air pollution I hope Climate Change and the road to Net Zero delivers an understanding of humanity s relationship with Earth that is as intriguing as Simon Lewis and Mark Maslin s The Human Planet or Yuval Noah Harari s Sapiens I very much hope too that the book conveys the passion and call to action of David Wallace Well s The Uninhabitable Earth coupled with the sober economic analysis of The Climate Casino by William Nordhaus or Capital in the 21st century by Thomas Piketty and that it provides the technical rigour of Sustainable Energy Without The Hot Air by David MacKay the rationality of Hans Rosling s Factfulness and the eternal hope of The Future We Choose by Christiana Figueres and Tom Rivett Carnac I believe net zero will be cheaper cleaner safer more reliable more sustainable and will create more employment than if we remain bound to fossil fuels After reading the book I hope you will agree Mathew Hampshire Waugh Author
