**Knowledge Intensive Business Services**

**and Regional Competitiveness** João J. M. Ferreira, Mário L. Raposo, Cristina I. Fernandes, Marcus Dejardin, 2016-04-20

Research interest in the service sector has boomed in recent years as deindustrialisation became entrenched. Instead of being regarded as merely supplementary to traditional industry and manufacturing, services have generated progressively rising levels of growth in developed economies while at the same time coming to be recognised as major drivers of innovation. Among the factors which have helped service companies notch up swifter growth rates than all other sectors are the outsourcing of such services by other sectors, including the development of information and communication technologies and changes to the regulatory, legal and market frameworks, as well as globalisation and internationalisation. The result is a cluster of highly innovative firms which can loosely be grouped under the heading of Knowledge Intensive Business Services (KIBS). Knowledge Intensive Business Services and Regional Competitiveness charts the development of these firms and explores their success through four mutually linked parts: KIBS and industrial dynamics; KIBS and their context; KIBS and their contribution to regional competitiveness and economic development; and finally KIBS and public policy. This book is suitable for researchers and policy makers interested in the rise of these influential actors and their influence on regional competitiveness.

**Diversity in the Knowledge Economy and Society** Elias G. Carayannis, Aris Kaloudis, Age Mariussen, 2008-01-01. The key message of this book is that heterogeneity should be seen as an intrinsic and indispensable element of knowledge systems. The authors address the concept of heterogeneity in a multi-disciplinary fashion, including perspectives from evolutionary economics and innovation system studies, and relate this approach to existing theories in a broad range of fields. The book postulates that one approach to such a re-conceptualization is what we call the Mode 3 system, consisting of Innovation Networks and Knowledge Clusters for knowledge creation, diffusion and use. This is a multi-layered, multi-modal, multi-nodal and multi-lateral system encompassing mutually and complementarily reinforcing innovation networks and knowledge clusters consisting of human and intellectual capital, shaped by social capital and underpinned by financial capital. Diversity in the Knowledge Economy and Society will appeal to academics and researchers of innovation and science, knowledge management and economics.

**Multipreneurship** Nicholas Harkiolakis, 2016-04-15. In Multipreneurship: Diversification in Times of Crisis, Nick Harkiolakis argues against the more commonly held view that diversification at the level of the individual entrepreneur, rather than that of the established corporation, is the wrong business strategy to pursue in times of economic crisis. He contends that entrepreneurship always proves in almost every circumstance and every part of the world to be a way out of economic straits, and it is widely accepted as the primary force that helps produce self-sufficiency, social inclusion, job creation, capital formation and skills acquisition. Threats to job stability in today's economic climate are expected to trigger latent entrepreneurship that could lead to re-investment of social capital to generate financial capital. Cash nowadays might not be the main value-added commodity. In an information society, some of the basic ingredients of successful entrepreneurship, such as confidence and social capital, might be equally important. Contrary to received wisdom,

in relation to SME diversification the ability to run a group of businesses as a profit ecosystem rather than business units might prove to be beneficial in volatile economic times If conditions improve one can always focus on growth of the most profitable and promising units Yet in unstable economic times resorting to back up alternatives away from the mainstream business of organizations might be a solution to sustainable development

Social Capital and Business Development in High-Technology Clusters Neslihan Aydogan, Yiu Por Chen, 2009-07-30 Neslihan Aydogan It is now widely accepted that geographical proximity matters to economic and social life Not only does it provide externalities that reduce transaction costs but it also helps transacting parties form networks from which they can benefit greatly More than ever economists have been trying to bridge the development gap between poor and rich regions Agglomerations are investigated toward that target because economists think that if certain regions can mix up that special formula to continuously innovate and produce then understanding and forming such agglomerations could be one way to go about that growth path We have designed the chapters of this book to work out the mechanics of geographical agglomerations in the United States with the focus of identifying the characteristics of such special formula Chapters 1-3 are designed to investigate the high tech clusters that have sprung up in the United States due to their innovative capacity to engage in high value added activities The first question we ask is What promotes the productivity of high tech firms We ask this question by taking into account the region in which a firm is located and the spillover effects of the region on the firm In particular we ask if the presence of a variety of industries or of similar industries promotes the productivity of high tech firms In this regard we are interested in distinguishing the high and low tech firms in terms of their driving factors

**ICT as a Driver of Women's Social and Economic Empowerment**

Dhaundiyal, Pankaj, Moid, Sana, 2023-04-05 The role of information and communication technologies as a tool for development has attracted the sustained attention of various agencies worldwide If the gender dimensions of information and communication technologies in terms of access and use capacity building opportunities employment and potential for empowerment are explicitly identified and addressed information and communication technologies can be a powerful catalyst for the political and social empowerment of women and the promotion of gender equality ICT as a Driver of Women's Social and Economic Empowerment contributes to the growing body of literature and present state of knowledge by offering evidence on how new information and communication technologies impact women's economic and social empowerment and overall welfare creation leading to inclusive growth Covering key topics such as economics entrepreneurship digital technologies and inclusion this premier reference source is ideal for industry professionals policymakers administrators business owners managers researchers academicians scholars practitioners instructors and students

*Challenging Entrepreneurship Research* Hans Landstrom, Annaleena Parhankangas, Alain Fayolle, Philippe Riot, 2016-06-10 The growth of entrepreneurship research has been accompanied by an increased convergence and institutionalization of the field In many ways this is of course positive but it also represents how the field has become mainstream with the concomitant risk that

individual scholars become embedded in a culture and incentive system that emphasizes and rewards incremental research questions while reducing the incentives for scholars to conduct challenging research This book challenges this status quo from accepted theories methodologies and paradigmatic assumptions to the relevance or lack of for contemporary practice and the impact of key journals on scholars directions in entrepreneurship research An invited selection of the younger generation of scholars within the field of entrepreneurship research adopt a critical and constructive posture on what has been achieved in entrepreneurship research the main assumptions which underly it but also open up new paths for creative entrepreneurship research in the future This is a must read for all scholars educators and advanced students in entrepreneurship research     Current Researches in Educational Sciences IV Fatih Ünal BOZDAĞ,Ömer Tuğrul KARA,2022-04-06
