compilation of nine essays dealing with a problem central to today's complex world. How can people best live and work with others who come from very different cultural backgrounds? The major focus of the nine essays in this book is the experience of living and working for long periods in other cultures. The book also focuses on other types of cross-cultural experiences such as majority-minority group relations, training and preparation, and integration. There are analyses of possible experiences people may have such as stress during adjustments. Other authors in this book address the benefits of intercultural action and integration into a country's educational system. International education is seen to benefit through a greater attention to face-to-face cross-cultural experience. The first seven essays are good descriptions of intercultural behavior and training, while Chapter 8 is an evaluation of cross-cultural training. The last chapter describes the atlas of affective meanings containing 620 concepts from 30 languages, culture communities for use in intercultural training and education. Behavioral and social scientists, trainers, and cross-cultural scientists, overseas businessmen, foreign students, diplomats, immigrants, and other people who work in different cultures will find this handbook very helpful.

Research Issues in Learning Disabilities

Sharon Vaughn, Candace S. Bos, 2012-12-06 In this chapter we described issues in conducting intervention research with students with learning disabilities on the secondary level. We maintained that interventions should be well grounded in theories of learning as well as characterizations of learning disabilities. Pressley Scruggs that they should first be conducted in a series of highly controlled laboratory-like experiments to carefully assess the potential utility of the intervention and that if the intervention is successful in highly controlled settings it should then be evaluated in classroom applications. We maintained that research designs should evolve as the research questions become more applied and that the results of laboratory research should be used to support the findings of classroom applications. Finally, we described several research designs that we have found useful in conducting classroom intervention research. There is a great deal more to conducting intervention research of course than experimental or quasi-experimental design. Intervention strategies likely to be effective must be identified, relevant literature must be reviewed, experimental materials must be developed, and cooperative schools, teachers, parents, and students must be located. Nevertheless, inadequate research designs can invalidate the best and most successful efforts in all of these areas, while effective and practical research designs can do much to document the best practices and advance our knowledge of effective interventions with students with learning disabilities.
