Taylor, 2015-06-25 This handbook addresses words in all their multifarious aspects and brings together scholars from every relevant discipline to do so The

many subjects covered include word frequencies sounds and sound symbolism the structure of words taboo words lexical borrowing words in dictionaries and thesauri word origins and change place and personal names nicknames taxonomies word acquisition and bilingualism words in the mind word disorders and word games puns and puzzles Words are the most basic of all linguistic units the aspect of language of which everyone is likely to be most conscious A new word that makes it into the OED is prime news when baby says its first word its parents reckon it has started to speak knowing a language is often taken to mean knowing its words and languages are seen to be related by the similarities between their words Up to the twentieth century linguistic description was mainly an account of words and all the current subdivisions of linguistics have something to say about them A notable feature of human languages is the sheer vastness of their word inventories and scholars and writers have sometimes deliberately increased the richness of their languages by coining or importing new items into their word hoards The book presents scholarship and research in a manner that meets the interests of students and professionals and satisfies the curiosity of the educated reader Ten Lectures on Natural Semantic MetaLanguage Cliff

Goddard, 2018-03-20 This lively lecture series by a leading expert introduces the theory practice and application of a versatile rigorous and well developed approach to cross linguistic semantics the NSM approach originated by Anna Wierzbicka Topics include history and philosophy of the study of meaning semantic primes and molecules emotions evaluation verbs and event structure cultural key words and scripts Case studies come from English Chinese Danish and other languages Applications in language teaching and intercultural education are also covered along with comparisons between NSM and other leading approaches to linguistic semantics The book will appeal to students and scholars of linguistics at all levels communication and translation scholars and anyone interested in a systematic and non Anglocentric approach to meaning culture and cognition Semantic and Lexical Universals Cliff Goddard, Anna Wierzbicka, 1994-05-04 This set of papers represents a unique collection it is the first attempt ever to empirically test a hypothetical set of semantic and lexical universals across a number of genetically and typologically diverse languages In fact the word collection is not fully appropriate in this case since the papers report research undertaken specifically for the present volume and shaped by the same guidelines They constitute parallel and strictly comparable answers to the same set of questions coordinated effort with a common aim and a common methodology The goal of identifying the universal human concepts found in all languages is of fundamental importance both from a theoretical and a practical point of view since these concepts provide the basis of the psychic unity of mankind underlying the clearly visible diversity of human cultures They also allow us to better understand that diversity itself because they provide a common measure without which no precise and meaningful comparisons are possible at all A set of truly universal or even near universal concepts can provide us with an invaluable tool for interpreting and explaining all the culture specific meanings encoded in the language and culture systems of the world It can also provide us with a tool for explaining meanings across cultures in education business trade international relations and so on The book contains 13

chapters on individual languages including Japanese by Masayuki Onishi Chinese by Hilary Chappel Thai by Anthony Diller Ewe Africa by Felix Ameka Miskitu languages of South America by Kenneth Hall Australian Aboriginal languages Aranda Yankunytjatjara and Kayardild by Jean Harkins Semantic theory and semantic universals by Goddard Introducing lexical primitives by Goddard and Wierzbicka and Semantic primitives across languages a critical review by Wierzbicka

time offering a framework for the rigorous description of different languages and cultures A major synthesis of Anna Wierzbicka's work
