## **Pitman Research Notes On Mathematics Series Functional Analysis And Two Point Differential Operators:**

*Functional Analysis and Two-point Differential Operators* John Locker, 1986      Spectral Theory of Non-Self-Adjoint Two-Point Differential Operators John Locker, 2000 Develops the spectral theory of an  $n$ th order non self adjoint two point differential operator  $L$  in the complex Hilbert space  $L^2(0, 1)$ . The differential operator  $L$  is determined by an  $n$ th order formal differential  $l$  and by  $n$  linearly independent boundary values  $B_1 \dots B_n$ . Locker first lays the foundations of the spectral theory for closed linear operators and Fredholm operators in Hilbert spaces before developing the spectral theory of the differential operator  $L$ . The book is a sequel to *Functional analysis and two point differential operators* 1986. Annotation copyrighted by Book News Inc Portland OR      Eigenvalues and Completeness for Regular and Simply Irregular Two-Point Differential Operators John Locker, 2008 In this monograph the author develops the spectral theory for an  $n$ th order two point differential operator  $L$  in the Hilbert space  $L^2(0, 1)$  where  $L$  is determined by an  $n$ th order formal differential operator  $\ell$  having variable coefficients and by  $n$  linearly independent boundary values  $B_1 \dots B_n$ . Using the Birkhoff approximate solutions of the differential equation  $\rho \ell u = 0$  the differential operator  $L$  is classified as belonging to one of three possible classes: regular, simply irregular, or degenerate irregular. For the regular and simply irregular classes the author develops asymptotic expansions of solutions of the differential equation  $\rho \ell u = 0$ , constructs the characteristic determinant and Green's function, characterizes the eigenvalues and the corresponding algebraic multiplicities and ascents, and shows that the generalized eigenfunctions of  $L$  are complete in  $L^2(0, 1)$ . He also gives examples of degenerate irregular differential operators illustrating some of the unusual features of this class.      *Sturm-Liouville Theory* Anton Zettl, 2005 In 1836-1837 Sturm and Liouville published a series of papers on second order linear ordinary differential operators which started the subject now known as the Sturm-Liouville problem. In 1910 Hermann Weyl published an article which started the study of singular Sturm-Liouville problems. Since then the Sturm-Liouville theory remains an intensely active field of research with many applications in mathematics and mathematical physics. The purpose of the present book is a) to provide a modern survey of some of the basic properties of Sturm-Liouville theory and b) to bring the reader to the forefront of knowledge about some aspects of this theory. To use the book only a basic knowledge of advanced calculus and a rudimentary knowledge of Lebesgue integration and operator theory are assumed. An extensive list of references and examples is provided and numerous open problems are given. The list of examples includes those classical equations and functions associated with the names of Bessel, Fourier, Heun, Ince, Jacobi, Jorgens, Latzko, Legendre, Littlewood, McLeod, Mathieu, Meissner, Morse, as well as examples associated with the harmonic oscillator and the hydrogen atom. Many special functions of applied mathematics and mathematical physics occur in these examples.      *Ordinary Differential Operators* Aiping Wang, Anton Zettl, 2019-11-08 In 1910 Hermann Weyl published one of the most widely quoted papers of the 20th century in Analysis which initiated the study of singular Sturm-Liouville problems. The work on the foundations of Quantum Mechanics in the 1920s and 1930s including the proof of the spectral

theorem for unbounded self adjoint operators in Hilbert space by von Neumann and Stone provided some of the motivation for the study of differential operators in Hilbert space with particular emphasis on self adjoint operators and their spectrum Since then the topic developed in several directions and many results and applications have been obtained In this monograph the authors summarize some of these directions discussing self adjoint symmetric and dissipative operators in Hilbert and Symplectic Geometry spaces Part I of the book covers the theory of differential and quasi differential expressions and equations existence and uniqueness of solutions continuous and differentiable dependence on initial data adjoint expressions the Lagrange Identity minimal and maximal operators etc In Part II characterizations of the symmetric self adjoint and dissipative boundary conditions are established In particular the authors prove the long standing Deficiency Index Conjecture In Part III the symmetric and self adjoint characterizations are extended to two interval problems These problems have solutions which have jump discontinuities in the interior of the underlying interval These jumps may be infinite at singular interior points Part IV is devoted to the construction of the regular Green's function The construction presented differs from the usual one as found for example in the classical book by Coddington and Levinson

Functional Approach to Nonlinear Models of Water Flow in Soils G. Marinoschi, 2006-09-05 a pure mathematician does what he can do as well as he should whilst an applied mathematician does what he should do as well as he can Gr C Moisil Romanian mathematician 1906 1973 Flows in porous media were initially the starting point for the study which has evolved into this book because the acquirement and improving of knowledge about the analysis and control of water in filtration and solute spreading are challenging and demanding present issues in many domains like soil sciences hydrology water management water quality management ecology The mathematical modelling required by these processes revealed from the beginning interesting and difficult mathematical problems so that the attention was redirected to the theoretical mathematical aspects involved Then the qualitative results found were used for the explanation of certain behaviours of the physical processes which had made the object of the initial study and for giving answers to the real problems that arise in the soil science practice In this way the work evidences a perfect topic for an applied mathematical research This book was written in the framework of my research activity within the Institute of Mathematical Statistics and Applied Mathematics of the Romanian Academy

Some results were obtained within the project CNCSIS 33045 2004 2006 financed by the Romanian Ministry of Research and Education In a preliminary form part of the results included here were lecture notes for master and Ph D students during the scientific stages November December 2003 and May June 2004 of the author at the Center for Optimal Control and Discrete Mathematics belonging to the Central China Normal University in Wuhan

*Essential Pseudospectra* Aref Jeribi, 2018-04-17 *Linear Operators and Their Essential Pseudospectra* provides a comprehensive study of spectral theory of linear operators defined on Banach spaces The central items of interest in the volume include various essential spectra but the author also considers some of the generalizations that have been studied In recent years spectral theory has witnessed an explosive development This volume presents a survey of results concerning various types of essential spectra and pseudospectra in a unified axiomatic way and also discusses several topics that are new but which relate to the concepts and methods emanating from the book The main topics include essential spectra essential pseudospectra structured essential pseudospectra and their relative sets This volume will be very useful for several researchers since it represents not only a collection of previously heterogeneous material but also includes discussions of innovation through several extensions As the spectral theory of operators is an important part of functional analysis and has numerous applications in many areas of mathematics the author suggests that some modest prerequisites from functional analysis and operator theory should be in place to be accessible to newcomers and graduate students of mathematics
