**ABSTRACT.** Coral reefs are one of the world's most biologically diverse and productive ecosystems. However, these valuable resources are highly threatened by human activities. Satellite remotely sensed observations enhance our understanding of coral reefs and some of the threats facing them by providing global spatial and time-series data on reef habitats and the environmental conditions influencing them in near-real time. This review highlights many of the ways in which satellites are currently used to monitor coral reefs and their threats, and provides a look toward future needs and capabilities.

This false true-color image of Australia's Great Barrier Reef was acquired by the Multi-angle Imaging Spectro-Radiometer (MISR) instrument on August 26, 2000, and shows part of the southern portion of the reef adjacent to the central Queensland coast. The width of the MISR swath is approximately 380 km, with the reef clearly visible up to approximately 200 km from the coast. Image courtesy of NASA/GSFC/LARC/ISL MISR Team.

## Reefs Of Space:

The Reefs of Space Frederik Pohl, Jack Williamson, 1964      **Deep Space Probes** Gregory L. Matloff, 2006-08-31 The Space Age is nearly 50 years old but exploration of the outer planets and beyond has only just begun *Deep Space Probes* Second Edition draws on the latest research to explain why we should explore beyond the edge of the Solar System and how we can build highly sophisticated robot spacecraft to make the journey Many technical problems remain to be solved among them propulsion systems to permit far higher velocities and technologies to build vehicles a fraction of the size of today's spacecraft Beyond the range of effective radio control robot vehicles for exploring deep space will need to be intelligent thinking craft able to make vital decisions entirely on their own Gregory Matloff also looks at the possibility for human travel into interstellar space and some of the immense problems that such journeys would entail This second edition includes an entirely new chapter on holographic message plaques for future interstellar probes a NASA funded project      Deep-Space Probes Gregory Matloff, 2000-10-31 This expert guide written by a major figure at the NASA Marshall Spaceflight Center presents an authoritative and comprehensive survey of the present day state of the art in the field of extrasolar and interstellar space exploration focusing on the most promising techniques It looks at potential missions and explores the many exciting ideas being developed to probe the planets and nearby stars for signs of life Because of the tremendous current interest in the search for extrasolar life and extraterrestrial intelligence this is a timely and illuminating survey      *Corals in Space and Time* John Edward Norwood Veron, 1995 As concerns about the change in global climate and the loss of biodiversity have mounted attention has focused on the depletion of the ozone layer and the destruction of tropical rainforests But recently scientists have identified another seriously endangered ecosystem coral reefs In *Corals in Space and Time* J E N Veron provides a richly detailed study of corals that will inform investigations of these fragile ecosystems Drawing on twenty five years of research Veron brings together extensive field observations about the taxonomy biogeography paleontology and biology of corals After introducing coral taxonomy and biogeography as well as relevant aspects of coral biology for the non specialist he provides an interpretation of the fossil record and paleoclimates an analysis of modern coral distribution and a discussion of the evolutionary nature and origins of coral species Revealing a sharp conflict between empirical observations about the geographical variation within species Veron introduces a non Darwinian theory of coral evolution He proposes that the evolution of coral species is driven not primarily by natural selection but by constantly shifting patterns of ocean circulation which produce changing variations of genetic connectivity This mechanism of speciation and hybridization has far reaching consequences for the study of all types of corals and potentially many other groups of organisms as well      *Living Space* Michael E. Processes and Ore Deposits of Ultramafic-Mafic Magmas through Space and Time Sisir K. Mondal, William L. Sale, 2021-05-25 An eye opening introduction to the complexity wonder and vital roles of coral reefs When mass coral bleaching and die offs were first identified in the 1980s and eventually linked to warming events the scientific community was sure that such a dramatic and unambiguous signal would serve as a warning sign about the devastating effects of global warming Instead most people ignored that warning Subsequent decades have witnessed yet more degradation Reefs around the world have lost more than 50 percent of their living coral since the 1970s In this book distinguished marine ecologist Peter F Sale imparts his passion for the unexpected beauty complexity and necessity of coral reefs By placing reefs in the wider context of global climate change Sale demonstrates how their decline is more than simply a one off environmental tragedy but rather an existential warning to humanity He offers a reframing of the enormous challenge humanity faces as a noble venture to steer the planet into safe waters that might even retain some coral reefs      **Catalog of Space Shuttle Earth Observations Hand-held Photography**, 1993      **Encyclopedia of Earth and Space Science** Timothy M. Heather Graves,David Edward Beard,2019-04-05 This book examines mass communication and civic participation in the age of oil analyzing the rhetorical and discursive ways that governments and corporations shape public opinion and public policy and activists attempt to reframe public debates to resist corporate framing In the twenty first century oil has become a subject of civic deliberation Environmental concerns have intensified questions of indigenous rights have arisen and private and public investment in energy companies has become open to deliberation International contributors use local events as a starting point to explore larger issues associated with oil dependent societies and cultures This interdisciplinary collection synthesizes work in the energy humanities rhetorical studies and environmental studies to analyze the global discourse of oil from the start of the twentieth century into the era of transnational corporations of the 21st century This book will be a vital text for scholars in communication studies the energy humanities and in environmental studies Case studies are framed accessibly and the theoretical lenses are accessible across disciplines making it ideal for a post graduate and advanced undergraduate audience in these fields     Ocean Space Utilization '85 C.C. Mei,S. Motora,K. Okamura,J. Penzien,B.C. Jr. Gerwick,M. Homma,R. Lenschow,O.T. Magoon,2012-12-06 Ocean development has conventionally been targeted at the exploitation of natural resources however this trend is gradually changing Ocean space has itself come to be regarded as a precious resource Since problems associated with energy food supply and population will become even more crucial over the coming years ocean space is being reevaluated as a means for providing solutions in many of these areas The future prosperity of mankind will to a large measure be dependent on the manner in which the resources of the oceans are utilized To develop ocean space effectively international cooperation is essential since a global perspective is paramount It is on this basis of cooperation and communication that the present symposium was organized bringing together experts from all over the world to report current findings in ocean development and to consider areas of future research The material covered here deals with all aspects of these areas which are now of such of vital importance
