The Silent Experiences of Young Bilingual Learners Caroline Bligh, 2014-09-11 Many teachers are increasingly concerned with how to
 best support the learning of the rising numbers of bilingual learners in schools particularly those children who are new to
 English and therefore cannot yet communicate with the teacher or their peers in their first language during the silent period
 This book offers an alternative insight to that which is most commonly available to teachers and researchers as instead of
 examining language acquisition purely from a linguistic approach it explores the learning that is occurring through a
 sociocultural lens and even more significantly from the young child s perspective the worm s eye view Investigated through
 the experiences of young bilingual learners allows the reader to make sense of the making meaning that occurs when the
 child cannot make sense of his her new world nor communicate verbally in the language of instruction in the classroom
 Remarkably learning through the silent period is revealed as both complex and messy as the bilingual child mediates his or
 her own learning through a synthesis of alternative learning pathways The silent period is presented as a crucial time for
 learning distributed through a synthesis of close observation intense listening and most significantly copying the practices of
 others Throughout the silent period the children are not only seen to be learning but also contributing to the classroom
 practices The book not only initiates new understandings of second language learning but also offers creative ideas on how to
 raise the achievement of children who are learning English as an additional language
