L. Herring,2007-10-12 Many faithful Christians go weekly to church hear the word and read it for themselves Yet few realize the truths that go unnoticed just below the surface No I am not speaking of Bible codes The Bible has been described as a chest filled with treasures Some are old and comfortable while others are new and challenging Are you a seeker of truth Then dig into The Great Reflection The Star-apple Kingdom Derek Walcott,1979 **From Fires to Oceans: Dynamics of Fire-Derived Organic Matter in Terrestrial and Aquatic Ecosystems** Samuel Abiven,Cristina

Santín,2019-05-09 Fire derived organic matter also known as pyrogenic carbon PyC is ubiquitous on Earth It can be found in soils sediments water and air In this wide range of environments fire derived organic matter represents a key component of the organic matter pool and in many cases the largest identifiable group of organic compounds PyC is also one of the most persistent organic matter fractions in the ecosystems and its study is therefore particularly relevant for the global carbon cycle From its production during vegetation fires to its transfer into soils sediments and waters PyC goes through different transformations both abiotic and biotic Contrary to early assumptions PyC is not inert and interacts strongly with the environment evidence of microbial decomposition oxidation patterns and interactions with minerals have been described in different matrices PyC travels across these different environments and it is modified chemically and physically but remains persistent This Research Topic explores important questions in our understanding of fire derived organic matter from the characterization and quantification of PyC components to the transformation and mobilization processes taking place on terrestrial and aquatic ecosystems The studies compiled here provide novel and often unexpected results They all answer some of the questions posed and more importantly provide scope for many more

Henry ELLISON (Poet.),1848 **Forests under Fire** Christopher J. Huggard,Arthur R. Gómez,2016-12-15 The devastating fire that swept through Los Alamos New Mexico in the spring of 2000 may have been caused by one controlled burn gone wild but it was far from an isolated event All through the twentieth century our national forests have been under assault from all sides first ranchers and loggers laid their claims to our national forests then recreationists and environmentalists spoke up for their interests Who are our national forests really for In this book leading environmental historians show us what has been happening to these fragile woodlands Taking us from lumber towns to Indian reservations to grazing lands Forests

under Fire reveals the interaction of Anglos Hispanics and Native Americans with the forests of the American Southwest It examines recent controversies ranging from red squirrel conservation on Mt Graham to increased tourism in our national forests These case studies offer insights into human forest relationships in places such as the Coconino National Forest the Vallecitos Sustained Yield Unit and the Gila Wilderness Area while also drawing on issues and concerns about similar biospheres in other parts of the West Over the past century forest management has evolved from a field dominated by the conservationist perspective with humans exploiting natural resources to one that emphasizes biocentrism in which forests are seen as dynamic ecosystems Yet despite this progressive shift the assault on our forests continues through overgrazing of rangelands lumbering eroding mountainsides fire suppression and threats to the habitats of endangered species Forests under Fire takes a closer look at the people calling the shots in our national forests from advocates of timber harvesting to champions of ecosystem management and calls for a reassessment of our priorities before our forests are gone
