

Reflections in Time

Above there is reflection
Colorful and bright
Dancing in the sunlight
Shimmering at night

Just below the surface
Another world awaits
Holding onto mysteries
Until some future date

Our view will let us marvel
That these two coexist
And think on our experiences
And those we might have missed

The world is full of beauty
And also some surprise
Perhaps it is the future
Reflecting in our eyes

Model Based Signal Enhancement for Impulse Response Measurement Xun Wang, 2014 Impulse response measurements that are performed outdoors are highly susceptible to the uncertainties caused by the non perfect measurement setup the presence of background noise and fluctuations in media such as wind and temperature drift This work concentrates on two scenarios the measurement of reflection coefficients of noise barriers and the influence of temperature variances in machinery cavities Regarding the sound barrier measurement outdoors a linear four microphone array can be used to separate direct sound and reflected sound if the sound barrier does

not include complicated scattering structures With regard to the impulse response of an air borne sound measurement for a machine monitoring system a time warping model for inter period and intra period temperature variances is investigated

Tau-p: a plane wave approach to the analysis of seismic data P.L Stoffa,2012-12-06 In exploration seismology data are acquired at multiple source and receiver positions along a profile line These data are subsequently processed and interpreted The primary result of this process is a subsurface image of the exploration target As part of this procedure additional information is also obtained about the subsurface material properties e g seismic velocities The methods that are employed in the acquisition and processing of exploration seismic data are internally consistent That is principally near vertical incidence seismic waves are generated recorded and subsequently imaged The data processing methods commonly used are based upon a small angle of incidence approximation thus making the imaging problem tractable for existing data processing technology Although tremendously successful the limitations of this method are generally recognized Current and future exploration goals will likely require the use of additional seismic waves i e both compressional and shear precritical and postcritical reflections and refractions Also in addition to making better use of seismic travel times recent efforts to directly incorporate seismic amplitude variations show that the approach may lead to a better understanding of subsurface rock properties In response to more demanding exploration goals recent data acquisition techniques have improved significantly by increasing the spatial aperture and incorporating a large number of closely spaced receivers The need for better subsurface resolution in depth and position has encouraged the use of 240 512 and even 1024 recorded data channels with receiver separations of 5 to 25 m *Seismic Interferometry* Gerard Thomas Schuster,2009-05-14 Describes the theory and practice of seismic interferometry for academic researchers oil industry professionals and advanced students

Why Not Win? Larry Thornton, 2019-04-01 Aspiring business owners and executives seeking to climb to the next rung young to mid career professionals seeking tools for life achievement and general readers interested in biographies of successful people will like Larry Thornton's *Why Not Win*. The book is a front row seat to how one man altered his thinking to transform his life. The book begins with his growing up with brown skin in the 1960s in segregated Montgomery Alabama. A desegregation school pioneer Thornton was a classroom failure until a perceptive English teacher showed him he had value and encouraged him to go to college. Like the educator who changed his life Thornton became a classroom teacher. But budget cuts took his job and he decided to rewrite his story using his artistic talent. Thornton's artistry and work ethic got him attention at Coca Cola both for the good and the bad. He had to figure out a way to navigate this new world where higher ups praised him but co workers reminded him of his blackness by drawing a noose in his workstation. He persevered by learning to appreciate and embrace diversity people resources and conflicting opinions. While his success grew at Coca Cola Thornton did the unthinkable set out to be the first African American to own a McDonald's franchise in Birmingham. This thorny journey was peppered with threats attempts to thwart his mission and a marriage he could not keep from falling apart. He absorbed the try try and try again motto and came to see that failure was a prelude to feasting upon the sweet fruit of success. Thornton's own mother never had a checking account but years after her passing he found himself on the board of directors for a major financial institution. He slowly became a part of a small fraternity of captains of industry and fought past guilt and insecurity to pave the way for others who look like him to join him at the table. Trying to fit into this new world he learned that Thank you Please and Excuse me are perhaps three of the most powerful phrases in communication. Thornton made up his mind that he would spend each day on a mission to show his unbending gratitude for his life and its benefits by fostering a supreme attitude and maintaining consistency in vision purpose and an unwavering commitment to principles. Thornton's journey from Madison Park Montgomery has been a long one. *Why Not Win* reflects on his most useful lessons and the anecdotes associated with them. If he were a Zen monk his koan might well be Plan your past. By that he means think ahead one day one week one year even twenty years out and decide today your desired outcome and work for it. Thank God for memories he says. Let's plan to make them pleasant ones.
