Reforestation Practices in Southwestern Oregon and Northern California Stephen D. Hobbs, 1992

Reforestation Efforts in Western Oregon United States. Congress. House. Committee on Agriculture. Subcommittee on Forests, 1977 *Silvicultural Research and the Evolution of Forest Practices in the Douglas-fir Region*, 2007 Silvicultural practices in the Douglas fir region evolved through a combination of formal research observation and practical experience of forest managers and silviculturists and changing economic and social factors This process began more than a century ago and still continues It has had a great influence on the economic well being of the region and on the present characteristics of the regions forests This long history is unknown to most of the public and much of it is unfamiliar to many natural resource specialists outside and even within the field of silviculture We trace the history of how we got where we are today and the contribution of silvicultural research to the evolution of forest practices We give special attention to the large body of information developed in the first half of the past century that is becoming increasingly unfamiliar to both operational foresters and perhaps more importantly to those engaged in forestry research We also discuss some current trends in silviculture and silviculture related research **North American Terrestrial Vegetation** Michael G. Barbour, William Dwight Billings, 2000 This second edition provides extensively expanded coverage of North American vegetation from arctic tundra to tropical forests *Regional Silviculture of the United States* John W. Barrett, 1995-02-28 A valuable working resource for professionals An excellent text for advanced forestry students This unique book provides students and professionals with a broad based knowledge of contemporary silviculture theory and practice Throughout the authors emphasize fundamental questions of edaphic physiographic and climatic site factors as well as ecological relationships and silvical characteristics of major tree species Updated and expanded to reflect the many scientific socioeconomic and public policy trends that have had a profound impact on silviculture over the past decade this Third Edition of *Regional Silviculture of the United States* Brings together the knowledge and expertise of fourteen leading experts from around the nation Provides a rational framework with which to critically assess forest data and to develop innovative silvicultural solutions Features region by region coverage of the eleven major forest types in the continental U S and Alaska Offers a detailed look at practices that promote a wide range of forest resources from wood production and outdoor recreation to wildlife habitat and range forage production Now includes more in depth coverage of such crucial themes as biodiversity endangered species habitat fragmentation forest health landscape management neotropical migrants and more silviculture is not reducible to a series of rules it must be flexible and adaptable to a variety of conditions Much of it is an art as well as a synthesis of ecology and economics There is no single best answer to how a stand should be managed And institutional and societal constraints must be considered from the Preface by John W Barrett *Regional Silviculture of the United States* Third Edition is not a cookbook offering pat recipes for solving typical silvicultural problems Instead it arms those responsible for the development and care of

forests with something far more valuable a rational framework for the analysis of forest data and the development of innovative solutions tailored to specific forest types and the shifting politicoeconomic constraints under which silviculturalists must work One way in which this book achieves that goal is by providing readers with a broad based knowledge of contemporary silviculture theory and practice In chapters organized according to the eleven major forest regions of the continental U S fourteen recognized experts from around the nation each of them a specialist in a particular region of operation offer their valuable insights and observations on silviculture in general and on various silvicultural practices with which they are familiar Throughout the authors are attentive to fundamental considerations of edaphic physiographic and climatic site factors as well as ecological relationships and silvical characteristics of major tree species This Third Edition of John W Barrett s classic has been revised and expanded to encompass a number of important themes which have risen to prominence within silviculture over the past decade including biodiversity endangered species habitat fragmentation forest health landscape management and neotropical migrants Timely authoritative and comprehensive in scope *Regional Silviculture of the United States Third Edition* is a valuable resource for foresters forestry students ecologists environmental scientists and all those concerned with development management and preservation of our most valuable national treasure

General Technical Report PNW-GTR, 1987

Regional Management-Study Template for Learning about Post-Wildfire Management B. T. Bormann, 2010-10

Because of a lack of knowledge and studies deciding how to manage after wildfire is fraught with uncertainty The authors have developed the concept of a network of mgmt studies with a rigorous experimental design to fill this need Details on how to implement this generic landscape scale mgmt study on future wildfire areas are provided They emphasize documenting expectations conceptual modeling scaling for major questions analyzing for similarity and monitoring cost effectively The design compares a range of mgmt strategies at the landscape scale Examples of more specific prescriptions for each of the strategies are provided and the Tripod Fire in eastern Washington state in 2006 is used as an example
