American Agriculture and the Problem of Monopoly Jon Lauck, 2000-01-01 The breathtaking number of mergers and joint ventures among agribusiness firms has left independent American farmers facing the power of an increasingly concentrated buying sector The origin of farmers concern with such economic concentration dates back to protests against meatpackers and railroads in the late nineteenth century Jon Lauck examines the dimensions of this problem in the American Midwest in the decades following World War II He analyzes the nature of competition within meat packing and grain markets In addition he addresses concerns about corporate entry into production agriculture and the potential displacement of a production system defined by independent family farms Lauck also considers the ability of farmers to organize in order to counter the market power of large scale agribusiness buyers He explores the use of farmer cooperatives and other

mechanisms which may increase the bargaining power of farmers The book offers the first serious historical examination of the National Farmers Organization which fully embraced the bargaining power cause in the postwar period Lauck finds that independent farmers attempts at organization have been more successful than previously recognized but he also shows that their successes have been undermined by the growing concentration and power of agri business firms justifying a new approach to antitrust law in agricultural markets Thinking Ecologically Marian Chertow,1997-01-01 Twenty five years ago the Cuyahoga River in Ohio was so contaminated that it caught fire air pollution in some cities was thick enough to taste and environmental laws focused on the obvious enemy large American factories with belching smokestacks and pipes gushing wastes Federal legislation has succeeded in providing cleaner air and water but we now confront a different set of environmental problems less visible and more subtle This important book offers thought provoking ideas on how America can respond to changing public health and ecological risks and create sound environmental policy for the future The innovative thinkers of the Next Generation Project of the Yale Center for Environmental Law and Policy experts from business government nongovernmental organizations and academia propose reforms that balance environmental efforts with other public needs and issues They call for new foundations for environmental law and policy adoption of a more diverse set of policy tools and strategies economic incentives ecolabels and new connections between critical sectors agriculture energy transportation service providers and environmental policy Future progress must involve not only officials from the U S Environmental Protection Agency and state environmental protection departments say the authors but also decision makers as diverse as mayors farmers energy company executives and delivery route planners To be effective next generation policy making will view environmental challenges comprehensively connect academic theory with practical policy and bridge the gaps that have caused recent policy debates to break down in rancor This book begins the process of accomplishing these challenging goals **Agricultural Policy, Agribusiness, and Rent-seeking Behavior** Andrew Schmitz,2010-01-01 The second edition of the groundbreaking *Agricultural Policy Agribusiness and Rent Seeking Behaviour* expands upon its original analysis of the economic policies that affect agriculture and agribusiness Widening their lens to include information on the European Union the authors continue to emphasize the role of farmers and agribusiness in the formation of policy exploring the issues from both economic and historical perspectives More theoretical than the first volume in its discussions of welfare economics and the theory of public choice the second edition also addresses the broad significance of agricultural policies such as biofuels nutrition multifunctionality genetically modified organisms and multinational firms The authors maintain and expand the empirical content to provide more practical examples suited to teaching and analyse specific problems including price and income stabilization science policy environmental policy and food quality and safety **The Changing Concentration of U.S. Agricultural Production During the 20th Century** R. Neal Peterson,United States. Dept. of Agriculture. Economic Research Service,1993 **Willard Cochrane and the American Family Farm** Richard A.

Levins,2016-07 Willard Cochrane watched the dramatic decline in American family farming from a vantage point few can claim He became one of the country s premier agricultural economists and carried the standard of liberalism for President Kennedy in the last serious fight to save the family farm Then for forty long years he held to the principles while traditional agriculture faded into what he once called family farms in form but not in spirit This book is about the spirit of family farming Thomas Jefferson s dream of an agrarian democracy What should we do in the face of globalization high technology and corporate control of our food supply Willard Cochrane and the American Family Farm recounts how one man faced these issues and where he would wish us to go in the twenty first century **Agricultural Policy, Agribusiness, and**

Rent-Seeking Behaviour, Third Edition Andrew Schmitz,Charles B. Moss,Troy G. Schmitz,G. Cornelis van Kooten,H. Carole Schmitz,2022-04-27 Costing billions of dollars annually international trade in agricultural products is impactful and influenced by several factors including climate change food policy and government legislation The third edition of Agricultural Policy Agribusiness and Rent Seeking Behaviour provides comprehensive economic analyses of the policies that affect agriculture and agribusiness in Canada and the United States Looking at current agricultural policies the third edition includes new chapters on food pyramids climate change and GMOs while also highlighting the effect of international policies on Canadian trade including the problematic US ethanol policy The new edition addresses current issues including how the COVID 19 pandemic has negatively affected agricultural value chains and played a hand in the ongoing growth in opioid use Including a number of key findings and discussing current debates on topics including foreign ownership of Canadian farmland Agricultural Policy Agribusiness and Rent Seeking Behaviour will appeal to students in agricultural economics and policy as well as policymakers agricultural firms energy companies and readers wishing to reduce their nation s carbon footprint **Food Systems in an Unequal World** Ryan E. Galt,2014-03-27 Pesticides a short term aid for farmers can

often be harmful undermining the long term health of agriculture ecosystems and people The United States and other industrialized countries import food from Costa Rica and other regions To safeguard the public health importers now regulate the level and types of pesticides used in the exporters food production which creates regulatory risk for the export farmers Although farmers respond to export regulations by trying to avoid illegal pesticide residues the food produced for their domestic market lacks similar regulation creating a double standard of pesticide use Food Systems in an Unequal World examines the agrochemical dependent agriculture of Costa Rica and how its uneven regulation in export versus domestic markets affects Costa Rican vegetable farmers Examining pesticide dependent vegetable production within two food systems the author shows that pesticide use is shaped by three main forces agrarian capitalism the governance of food systems throughout the commodity chain and ecological dynamics driving local food production Those processes produce unequal outcomes that disadvantage less powerful producers who have more limited choices than larger farmers who usually have access to better growing environments and thereby can reduce pesticide use and production costs Despite the rise of

alternative food networks Galt says persistent problems remain in the conventional food system including widespread and intensive pesticide use Facing domestic price squeezes vegetable farmers in Costa Rica are more likely to supply the national market with produce containing residues of highly toxic pesticides while using less toxic pesticides on exported vegetables In seeking solutions Galt argues for improved governance and research into alternative pest control but emphasizes that the process must be rooted in farmers economic well being

A Framework for Assessing Effects of the Food System National Research Council, Institute of Medicine, Board on Agriculture and Natural Resources, Food and Nutrition Board, Committee on a Framework for Assessing the Health, Environmental, and Social Effects of the Food System, 2015-06-17 How we produce and consume food has a bigger impact on Americans well being than any other human activity The food industry is the largest sector of our economy food touches everything from our health to the environment climate change economic inequality and the federal budget From the earliest developments of agriculture a major goal has been to attain sufficient foods that provide the energy and the nutrients needed for a healthy active life Over time food production processing marketing and consumption have evolved and become highly complex The challenges of improving the food system in the 21st century will require systemic approaches that take full account of social economic ecological and evolutionary factors Policy or business interventions involving a segment of the food system often have consequences beyond the original issue the intervention was meant to address *A Framework for Assessing Effects of the Food System* develops an analytical framework for assessing effects associated with the ways in which food is grown processed distributed marketed retailed and consumed in the United States The framework will allow users to recognize effects across the full food system consider all domains and dimensions of effects account for systems dynamics and complexities and choose appropriate methods for analysis This report provides example applications of the framework based on complex questions that are currently under debate consumption of a healthy and safe diet food security animal welfare and preserving the environment and its resources *A Framework for Assessing Effects of the Food System* describes the U S food system and provides a brief history of its evolution into the current system This report identifies some of the real and potential implications of the current system in terms of its health environmental and socioeconomic effects along with a sense for the complexities of the system potential metrics and some of the data needs that are required to assess the effects The overview of the food system and the framework described in this report will be an essential resource for decision makers researchers and others to examine the possible impacts of alternative policies or agricultural or food processing practices

A Revolution Down on the Farm Paul K. Conkin, 2008-09-01 At a time when food is becoming increasingly scarce in many parts of the world and food prices are skyrocketing no industry is more important than agriculture Humans have been farming for thousands of years and yet agriculture has undergone more fundamental changes in the past 80 years than in the previous several centuries In 1900 30 million American farmers tilled the soil or tended livestock today there are fewer than 4 5 million farmers who feed a

population four times larger than it was at the beginning of the century Fifty years ago the planet could not have sustained a population of 6.5 billion now commercial and industrial agriculture ensure that millions will not die from starvation Farmers are able to feed an exponentially growing planet because the greatest industrial revolution in history has occurred in agriculture since 1929 with U.S. farmers leading the way Productivity on American farms has increased tenfold even as most small farmers and tenants have been forced to find other work Today only 300,000 farms produce approximately ninety percent of the total output and overproduction largely subsidized by government programs and policies has become the hallmark of modern agriculture

A Revolution Down on the Farm: The Transformation of American Agriculture since 1929 charts the profound changes in farming that have occurred during author Paul K. Conkin's lifetime His personal experiences growing up on a small Tennessee farm complement compelling statistical data as he explores America's vast agricultural transformation and considers its social, political, and economic consequences He examines the history of American agriculture showing how New Deal innovations evolved into convoluted commodity programs following World War II Conkin assesses the skills, new technologies, and government policies that helped transform farming in America and suggests how new legislation might affect farming in decades to come Although the increased production and mechanization of farming has been an economic success story for Americans, the costs are becoming increasingly apparent Small farmers are put out of business when they cannot compete with giant, non-diversified corporate farms Caged chickens and hogs in factory-like facilities or confined dairy cattle require massive amounts of chemicals and hormones ultimately ingested by consumers Fertilizers, new organic chemicals, manure disposal, and genetically modified seeds have introduced environmental problems that are still being discovered *A Revolution Down on the Farm* concludes with an evaluation of farming in the twenty-first century and a distinctive meditation on alternatives to our present large-scale mechanized, subsidized, and fossil-fuel and chemically dependent system

The WTO, Agriculture and Sustainable Development Heinrich Wohlmeyer, Theodor

Quendler, 2017-09-08 Despite the Doha declaration of November 2001, the failure to start a new round of global trade negotiations at Seattle in December 1999, and the hostility of protesters to the trade liberalization process, and growing global economic and social disparities, was a wake-up call for the World Trade Organisation (WTO). The ambitious goal of this ground-breaking book is to identify the strengths and weaknesses of liberalized world trade, in particular in the agricultural sector, and to investigate to what extent the current WTO agreements provide the necessary fail-safe devices to react to trade-related negative impacts on sustainability, environmental protection, and food security The background and interrelationship between the WTO, the tenets of sustainable development, and the unique features of the agriculture and forestry sectors are explored, and conclusions regarding the deficits of the world trade system and its conflicts with basic societal goals such as sustainability are drawn Agriculture and forestry have a particular affinity with what the authors call strong sustainability and are to be among the major agenda items in forthcoming WTO negotiations The book proposes that sustainable

agricultural production techniques such as integrated and organic farming provide a series of related services to community and environment which could be severely prejudiced by wholesale trade liberalization and the imposition of the large scale production methods of the mega trade giants of the USA and Europe And yet the concept of sustainability is referred to only tangentially in the existing WTO agenda The WTO Agriculture and Sustainable Development argues that without a formal recognition of this failing the premise that free trade is inherently advantageous for all countries is a falsehood Further unfettered liberalization is unsustainable and a social and environmental multilateral framework must be agreed to reinterpret or adapt a host of WTO regulations that are at odds with sustainable development The core problem is that under the current system import duties can only be differentiated by direct goods and services and not by their means of production sustainable or otherwise Therefore a range of environmental policy measures in the agricultural sector such as the consideration of product life cycles the internalization of external costs and a coupling of trade liberalization with ecological obligations are proposed by the authors In addition they argue that unsustainable economic short termism must be curbed and the use of the stick of trade sanctions and the carrot of financial benefits for good environmental performance be permitted to promote sustainable agricultural practices This book will contribute greatly in addressing the lack of basic theoretical arguments at the intersection between trade and sustainable development a failing that has already been bemoaned by trade policy makers It is highly recommended reading for all those involved or interested in the WTO negotiations whether from multilateral organizations governments industry or civil society
