*Relativistic effects, or light-time shifts?* Mammadov, Jabbar Manaf oglu , 2015-01-01 Any unchangeable property of nature can be changed by declaring any of the variables in the formulas describing it to be constant For example one can postulate the constancy of 0 and then  $\infty$  and 0 will be variables That is everything depends on the convention In physics wherever the value appears the well known Lorentz coefficient immediately appears nearby In STR keeping the speed of light constant and in GTR its trajectory constant Einstein obtained an absolutely rectilinear and motionless Reference System In order to obtain the correct result he adapts the surrounding world to it instead in STR changing the length and in GTR the trajectory of the space time continuum Extending Galilean symmetry only to wave equations with the constant Einstein left all other fundamental equations of physics non invariant from the point of view of Galilean symmetry which gave rise to asynchronicities and many unsolved problems in physics This book argues that many known relativistic effects are merely light time shifts and that by replacing  $t$  in Galilean transformations with  $t - vt/s$  to account for signal delays many natural
