Regeneration And Plasticity In The Mammalian Visual System:

Regeneration and Plasticity in the Mammalian Visual System Dominic Man-Kit Lam, Garth M. Bray, 1992 This fourth volume in the Retina Research Foundation Symposia Proceedings highlights several of the strategies and experimental paradigms that are currently used to exploit and amplify the regenerative capacity of the adult mammalian visual system and reviews the exciting advances being made in understanding the molecular basis of central nervous system regeneration. Because loss of neurons or interruptions of their connective pathways in the mammalian visual system can in contrast to certain amphibians and fish lead to permanent loss of vision, studies of regeneration and plasticity in this system serve as valuable models for the reconstitution of other parts of the nervous system and as potential approaches to the diverse disorders that lead to visual loss. Dominic Man Kit Lam is Director of the Center for Biotechnology and Professor of Biotechnology, Cell Biology and Ophthalmology at Baylor College of Medicine. Garth M Bray is Professor in the Centre for Research in Neuroscience at McGill University.

Perceiving in Depth, Volume 1: Basic Mechanisms Ian P. Howard, 2012-01-27 The three volume work *Perceiving in Depth* is a sequel to *Binocular Vision and Stereopsis* and to *Seeing in Depth* both by Ian P Howard and Brian J Rogers. This work is much broader in scope than the previous books and includes mechanisms of depth perception by all senses including aural electrosensory organs and the somatosensory system. Volume 1 reviews sensory coding, psychophysical and analytic procedures and basic visual mechanisms. Volume 2 reviews stereoscopic vision. Volume 3 reviews all mechanisms of depth perception other than stereoscopic vision. The three volumes are extensively illustrated and referenced and provide the most detailed review of all aspects of perceiving the three dimensional world. Volume 1 starts with a review of the history of visual science from the ancient Greeks to the early 20th century with special attention devoted to the discovery of the principles of perspective and stereoscopic vision. The first chapter also contains an account of early visual display systems such as panoramas and peepshows and the development of stereoscopes and stereophotography. A chapter on the psychophysical and analytic procedures used in investigations of depth perception is followed by a chapter on sensory coding and the geometry of visual space. An account of the structure and

physiology of the primate visual system proceeds from the eye through the LGN to the visual cortex and higher visual centers This is followed by a review of the evolution of visual systems and of the development of the mammalian visual system in the embryonic and post natal periods with an emphasis on experience dependent neural plasticity An account of the development of perceptual functions especially depth perception is followed by a review of the effects of early visual deprivation during the critical period of neural plasticity on amblyopia and other defects in depth perception Volume 1 ends with accounts of the accommodation mechanism of the human eye and vergence eye movements **National Library of Medicine Current**

Essential Biological Psychology Jim Barnes,2013-02-01 Drawing on the latest exciting research Essential Biological Psychology provides students with a solid grasp of the relationship between mind and behaviour and a detailed understanding of the underlying structure and physiological mechanisms that underpin it The functions of the nervous system are explained and implications for health are explored Throughout the book Jim Barnes encourages students to evaluate essential concepts and theoretical issues Features include key concepts highlighted throughout the text enables

students to grasp the fundamental knowledge and understanding of the structures and functions of the human nervous system that are relevant to the study of psychology the snapshot of key studies detailed in the textboxes allow critical evaluation of the role of physiology in human behaviour against a backdrop of up to date research clear explanations of the key methods in the text give students an appreciation of the contributions made by the different approaches and research methods that are used in biological psychology memory maps and diagrams within the text encourage learning and allow students to formulate memory aids to assist recall in exam conditions a companion website consists of PowerPoint lecture slides and a testbank for teachers 50 questions per chapter as well as interactive self assessment testbank for students 10 questions per chapter
