Seismic Vulnerability and Impact of Disruption of Lifelines in the Conterminous United States Christopher Rojahn,Lloyd S. Cluff,1991 **Seismic Vulnerability and Impact of Disruption of Lifelines in the Conterminous United States** Federal Emergency Management Agency,2013-04-13 Lifeline is an earthquake engineering term denoting those systems necessary for human life and urban function without which large urban regions cannot exist Lifelines basically convey food water fuel energy information and other materials necessary for human existence from the production areas to the consuming urban areas Prolonged disruption of lifelines such as the water supply or electric power for a city or urbanized region would inevitably lead to major economic losses deteriorated public health and eventually population migration Earthquakes are probably the most likely natural disaster that would lead to major lifeline disruption With the advent of more and more advanced technology the United States has increasingly become dependent on the reliable provision of lifeline related commodities such as electric power fuel and water A natural question is What is the potential for major disruption to these lifelines especially at the regional level The initiation of this study by the Federal Emergency Management Agency FEMA is based in part on a need to better understand the impact of disruption of lifelines from earthquakes and to assist in the identification and prioritization of hazard mitigation measures and policies In addition the report is intended to improve national awareness of the importance of protecting lifeline systems from earthquakes and of assuring lifeline reliability and continued serviceability The specific contractual requirements of this project and report are To assess the extent and distribution of existing U S lifelines and their associated seismic risk and To identify the most critical lifelines and develop a prioritized series of steps for reduction of lifeline seismic vulnerability based on overall benefit FEMA is also sponsoring a companion study to develop and demonstrate a model methodology for assessing the seismic vulnerability and impact of disruption of water transmission and distribution systems In this initial study lifelines of critical importance at the U S national level have been analyzed to estimate overall seismic vulnerability and to identify those lifelines having the greatest economic impact given large credible U S earthquakes The lifelines examined include electric systems water gas and oil pipelines highways and bridges airports railroads ports and emergency service facilities The vulnerability estimates and impacts developed are presented in terms of estimated direct damage losses and indirect economic losses These losses are considered to represent a first approximation because of the assumptions and methodology utilized because several lifelines are not included and because in some cases the available lifeline inventory data lack critical capacity information **Wind and Seismic Effects** United States-Japan Cooperative Program in Natural Resources. of Earthquake Damaged Concrete and Masonry Wall Buildings , Seismic Design and Practice into the Next Century Edmund Booth,2022-05-04 The papers from 18 countries in Europe and elsewhere contain discussions of quite radical innovations in material technology design philosophy experimental techniques and analytical approaches that will affect seismic design practice into the next century Papers are organised into 9 sections Ground motion and seismic hazard studies Seismic design of foundations Seismic design of steel concrete and masonry buildings Seismic design of offshore nuclear and petrochemical installations Seismic design of bridges dock and power station structures Repair and strengthening of bridges and buildings Active and passive methods of seismic control Dynamic testing methods Seismic codes of practice The proceedings will provide essential material for all those from both industrial and research organisations needing to keep in touch with the state of the art in earthquake engineering and related earth sciences **Evaluation of Earthquake Damaged Concrete and Masonry Wall Buildings ,1999 Guidelines for the Seismic Evaluation and Upgrade of Water Transmission Facilities** John M. Eidinger,Ernesto A. Avila,1999-01-01 Prepared by the Technical Council on Lifeline Earthquake Engineering of ASCE This TCLEE Monograph provides guidelines for the seismic evaluation and upgrade of water transmission facilities including aqueducts tunnels canals buried pipelines elevated pipelines and their appurtenances Topics covered include the performance of these facilities in past earthquakes geotechnical issues performance criteria risk analysis analysis methods and a series of case studies The guidelines can also be used for the design of new water transmission facilities The case studies cover seismic designs and retrofits for the Mokelumne Aqueduct the Contra Costa Canal the Borel Canal buried pipes at fault crossings and auxiliary water fire fighting systems The case studies also examine post earthquake operations financial issues and the benefits of seismic retrofits
