Rosen, 1989-10-11 *Research Activities Report* Rush-Presbyterian-St. Lukes Medical Center (Chicago), 1989 *Lung Cancer* John G. Gruhn, Steven T. Rosen, 1989 A historical review of the description and treatment of lung cancer designed as a tool for medical researchers and practitioners but also accessible to non medical readers who are versed in modern scientific concepts It presents and discusses source material from as early as the 16th century Agricola Paracelsus including excerpts from texts reproductions of book pages drawings and the x ray and microscopic photographs of this century The history is presented not as a string of events but as an inexorable drive to the present an approach rarely encountered or admitted to in the history of anything but science Separately volume one costs 65 volume two 72 Annotation copyrighted by Book News Inc Portland OR *Trusting Doctors* Jonathan B. Imber, 2015-09-01 For more than a century the American medical profession insisted that doctors be rigorously trained in medical science and dedicated to professional ethics Patients revered their doctors as representatives of a sacred vocation Do we still trust doctors with the same conviction In *Trusting Doctors* Jonathan Imber attributes the development of patients faith in doctors to the inspiration and influence of Protestant and Catholic clergymen during the nineteenth and early twentieth centuries He explains that as the influence of clergymen waned and as reliance on medical technology increased patients trust in doctors steadily declined *Trusting Doctors* discusses the emphasis that Protestant clergymen placed on the physician's vocation the focus that Catholic moralists put on specific dilemmas faced in daily medical practice and the loss of unchallenged authority experienced by doctors after World War II when practitioners became valued for their technical competence rather than their personal integrity Imber shows how the clergy gradually lost their impact in defining the physician's moral character and how vocal critics of medicine contributed to a decline in patient confidence The author argues that as modern medicine becomes defined by specialization rapid medical advance profit driven industry and ever more anxious patients the future for a renewed trust in doctors will be confronted by even greater challenges *Trusting Doctors* provides valuable insights into the religious underpinnings of the doctor patient relationship and raises critical questions about the ultimate place of the medical profession in American life and culture *Perspectives in Lung Cancer* Keyvan Moghissi, Jack Kastelik, Philip Barber, Peyman

Evolution of Radiation Oncology at Massachusetts General Hospital Herman D. Suit, Jay S. Loeffler, 2011-02-04 The Massachusetts General Hospital (MGH) has a history of excellence and is internationally recognized as a world class medical center providing quality medical care, advancing medicine through clinical and laboratory research, and facilitating the education of exceptional health care professionals. The Massachusetts General Hospital Radiation Oncology Department staff, residents, and fellows past and present concur that MGH stands for Man's Greatest Hospital. This decidedly immodest assessment is widely viewed amongst this group as being manifestly true, and that perception is clearly reflected in a marvelous esprit de corps. Such an unequivocally positive attitude is solidly based on the judgment that the best possible care is provided to each MGH patient, i.e., the patient is in fact Number One. There is a deep sense of pride in the contributions made by this department to the scientific advancement of oncology and to progressively and substantially increasing the proportion of patients who are free of tumor and of treatment related morbidity.

Evolution of Radiation of Oncology at Massachusetts General Hospital is the work of the former Chair of the Department, Herman D. Suit. From 1970-2000, his guidance and management of this Department brought it to recognition as a world class center. Dr. Suit was key in the development and building of the Department that now includes The Northeast Proton Therapy Center at the MGH. His passion for the science of radiation therapy and its evolving growth through the years is evident in this book. He has assembled a fascinating chronicle beginning with the creation of MGH in 1811, followed by personal experiences that culminated with his leadership of the Radiation Oncology Department.
