

The Luria-Nebraska Neuropsychological Battery in Forensic Assessment of Head Injury

By CHARLES J. GOLDEN, Ph.D.

In recent years, there has been increasing use of neuropsychological testimony in cases of head trauma and other situations which can lead to impairment of brain function. The rapid growth in this area has left some confusion as to the potential role of the psychologist and the role of neuropsychological testing in such cases. This article will address these issues, highlighting the major uses and issues in the area. For our purposes here, we will concentrate on the use of the Luria-Nebraska Neuropsychological Battery (LNNB). However, many of the comments can be applied to the more general area of the role of neuropsychological testing.

BASIC USES OF NEUROPSYCHOLOGICAL TESTING

Traditionally, neuropsychological testing has been used to identify whether the deficits shown by a patient are "organic" (related to injury to the brain) or "functional" (related to psychiatric disability). However, the recent growth of neuropsychology was not predicated on this traditional role, but rather has arisen with the recognition that a diagnosis of "organic" is at best only a first step in a more comprehensive analysis. One can have organic deficits which result in no real behavioral problems. Psychiatric disability can easily co-exist with brain injury, and indeed can be caused or complicated by brain injury.

As a result, neuropsychology has turned away from emphasizing such simple discriminations as an ultimate goal (although such a determination can represent a valid, initial step in a forensic case

so as to determine whether further work is warranted). In modern neuropsychological examinations, the final goal of testing includes several inter-related steps: 1) determination of the presence of a brain dysfunction; 2) determining the extent and nature of the deficits caused by an injury; 3) determining the role of such deficits in an individual's ability to work, handle family responsibilities, take care of themselves, handle stress, and function inter-actively with other people; 4) determine the probable relationship of the deficits to the head injury or other hypothesized causes; and 5) to design rehabilitation or other treatment programs which will allow the individual to take maximum advantage of his or her remaining capacity.

Of crucial importance in achieving these goals is the acquisition of adequate and reliable data on which to base such opinion. In making decisions on

Luria Nebraska Neuropsychological Batter:

Item Interpretation of the Luria-Nebraska Neuropsychological Battery ,1982-01-01 The Luria Nebraska Neuropsychological Battery is a relatively new neurodiagnostic test and there is a growing demand for material on the more advanced aspects of its interpretation This book organized around the theoretical meaning of items the empirical correlations between items and the factor structure of the individual scales is a first response to that demand It will serve to give greater understanding of the psychological skills that underlie each item on the Luria Nebraska battery an understanding prerequisite to the techniques of syndrome analysis described in the writings of A R Luria and it will be particularly useful to those who have limited experience with actual case material The major part of the book is an analysis of each Luria Nebraska scale either item by item or as a unit For each scale the authors examine the theoretical intent of the items and the underlying skills according to Luria s theory They then present the results of item interrelations analysis to determine whether the items tap common skills Finally they describe the factor structure of the various scales exploring the interrelations of items within each scale In addition to analyzing the behavioral scales of the Luria Nebraska battery the book reviews a number of other empirical scales that further aid interpretation particularly the experimental localization scales that tap focal deficits in specific areas of the brain Also included are case histories that illustrate the process of diagnosis in patients who receive a series of Luria Nebraska batteries over the course of their treatment Finally the authors briefly discuss subcortical disorders an issue often ignored in clinical neuropsychological testing

Hammeke,Western Psychological Services (Firm),1991 **Clinical Application of Neuropsychological Test Batteries** Charles J. Golden,Gerald Goldstein,Theresa M. Incagnoli,2013-11-11 Clinical neuropsychology has become a field of major prominence during the past several years as well as a field of great complexity As a result of the extensive amount of activity that neuropsychology has experienced recently two major developments have emerged First several approaches have evolved regarding comprehensive neuropsychological assessment There are presently several standard test batteries in common use as well as an approach to assessment that does not make use of standard batteries but rather fits the evaluation accomplished to the particular diagnostic problems presented by the individual patient Second a great deal of specialization has emerged with assessment procedures developed for evaluation of specific types of neuropsychological deficit The purpose of this volume is to review these developments particularly with reference to their implications for application in clinical settings The history of this book s development is of particular interest Some years ago the Veterans Administration became concerned with developing

an optimal method of neuropsychological assessment for its many health care related facilities Initially the problem was conceptualized in terms of whether the VA should encourage wider use of the long established Halstead Reitan Neuropsychological Test Battery HRB or promote more extensive use of the recently developed Luria Nebraska Neuropsychological Test Battery LNNB A conference was funded to bring together authorities in clinical neuropsychology to discuss this matter and present a series of papers to invited psychologists from various VA facilities *Item Interpretation of the Luria-Nebraska Neuropsychological Battery* Charles J.
