aspects of ocean circulation calculations It does not encompass every facet of the science of oceanographic modelling We have however captured most of the essence of mesoscale and large scale ocean modelling for blue water and shallow seas There have been considerable advances in modelling coastal circulation which are not included The methods section does not include important material on phase and group velocity errors selection of grid structures advanced methods to conservation in highly nonlinear systems inverse methods and other important ideas for modern ocean modelling Hopefully this book will provide a foundation of knowledge to support the growth of this emergent field of science The NATO Advanced Study Institute was supported by many organizations The seed money of course was received from the NATO Science Committee Many national organizations provided travel money for participants In France CNES IFREMER and CNRS provided funds to support the French participants In the U S *Superconducting Devices & Materials* ,1978 **Health planning reports subject index** United States.
