Axford,David H.E. Rees,2012-12-06 Lyme Borreliosis is a worldwide infectious disease causing a multisystem illness with considerable morbidity particularly in North America and Europe The causative agent is the spirochaete *Borrelia burgdorferi* which is usually transmitted by the ixodid tick from animal reservoirs This book is formed by contributions from the Second European Symposium on Lyme Borreliosis held at St George s Hospital Medical School London in 1993 which reviewed the current state of knowledge of the condition with regard to clinical manifestations diagnosis treatment ecology epidemiology biology and immunopathogenesis In this book important data is reviewed concerning the clinical manifestations of Lyme Borreliosis It seems that strain variation of the spirochaete is the main cause of regional differences seen in the clinical presentation of patients One striking example of this is the relatively high incidence of Lyme arthritis in the USA and apparent rarity of this manifestation in some areas of Europe These important studies open the way for exciting new research that focuses on the

immunological and molecular mechanisms that result in disease A full insight into the ecology of *Borrelia burgdorferi* is essential to a balanced understanding of the disease and a number of excellent reviews on this subject are included Significant advances with regard to the biology of *Borrelia burgdorferi* and the immunopathogenic mechanisms that result in disease have been made enabling the role of the Band T lymphocytes in disease to be established and the development of sophisticated phenotyping methods improved diagnostic tests and effective vaccines

Ecology and prevention of Lyme borreliosis Marieta A.H. Braks, Sipke E. van Wieren, Willem Takken, Hein Sprong, 2023-08-07 How can nature be protected and biodiversity be preserved while the threats of zoonotic diseases are minimised Expanding nature areas and creating ecological networks across Europe is not only beneficial for wildlife but also for the pathogens they carry A prominent case is Lyme borreliosis which has risen from relative obscurity to become a major public health problem in Europe The Dutch research program Shooting the messenger took a One Health approach aiming at the development of sustainable measures for the prevention of Lyme borreliosis An interdisciplinary network of researchers public health experts and nature managers gained and shared knowledge in the ecological processes of ticks Lyme spirochaetes and their vertebrate hosts as well as in the human epidemiology of tick bites and Lyme borreliosis These new insights together with new intervention methods and strategies are described in this book

Dumes,2020-08-24 While many doctors claim that Lyme disease a tick borne bacterial infection is easily diagnosed and treated other doctors and the patients they care for argue that it can persist beyond standard antibiotic treatment in the form of chronic Lyme disease In *Divided Bodies* Abigail A Dumes offers an ethnographic exploration of the Lyme disease controversy that sheds light on the relationship between contested illness and evidence based medicine in the United States Drawing on fieldwork among Lyme patients doctors and scientists Dumes formulates the notion of divided bodies she argues that contested illnesses are disorders characterized by the division of bodies of thought in which the patient s experience is often in conflict with how it is perceived Dumes also shows how evidence based medicine has paradoxically amplified differences in practice and opinion by providing a platform of legitimacy on which interested parties patients doctors scientists politicians can make claims to medical truth ***Lyme Disease*** Alan G.
