Sustainable Irrigation Management, Technologies and Policies Giulio Lorenzini, C. A. Brebbia, 2006 Fresh water is becoming an ever increasingly precious commodity control of which could lead in the near future to the type of political instability now associated with energy shortages This book addresses the different aspects of irrigation including not only the management of water resources and scientific and technical aspects but also matters related to policy and economics researchers in academia and industry as well as professional practitioners and policy makers Bringing together papers from the First International Conference on Sustainable Irrigation Management Technologies and Policies the book covers topics such as Irrigation Controls Irrigation Modelling Irrigation Systems and Planning Irrigation Management **Geotitles**, 1991

Estimation of Evapotranspiration Rates in Irrigated Lands of the Fergana Valley using Stable Isotopes Gulomjon Umirzakov, 2016-03-30 Agriculture in Uzbekistan critically depends on water resources availability therefore crop production especially of cotton and winter wheat is restricted mainly to irrigated areas As a result of water shortage under climate change land degradation issues in the region worsened and water use efficiency has considerably decreased over the decades Hence it is essential to investigate water balance parameters in irrigated lands Environmental isotopes have been widely applied in hydrological investigations particularly estimation of evapotranspiration rate one of the main components of the water balance in irrigated lands This study aims to estimate evapotranspiration rates in cotton fields by applying water stable isotopes ^2H and ^{18}O The study is based on the field experiments conducted during the vegetation periods 2010 and 2011 in the Fergana Region of Uzbekistan Soil for isotope analysis were sampled in a sandy field sandy loam 1 field rich with

gypsum and sandy loam 2 field without gypsum The soil water from the samples was extracted by the cryogenic extraction method $2H$ and $18O$ ratios of extracted water were determined using the laser spectroscopy method Evapotranspiration rates were estimated with the isotope mass balance model Besides evapotranspiration estimation this study examines the variability and characteristics of stable isotope signatures of different water sources in the study region and analyzes water extraction processes from different soil types and temporal changes of isotope signatures through the depth in irrigated cotton fields *Nuclear Techniques in Integrated Plant Nutrient, Water and Soil Management* ,2002 **Handbook of Engineering Hydrology (Three-Volume Set)** Saeid Eslamian,2018-10-03 While most books examine only the classical aspects of hydrology this three volume set covers multiple aspects of hydrology and includes contributions from experts from more than 30 countries It examines new approaches addresses growing concerns about hydrological and ecological connectivity and considers the worldwide impact of climate change
