Innovations and Advanced Techniques in Computer and Information Sciences and Engineering Tarek Sobh, 2007-09-04 Innovations and Advanced Techniques in Computer and Information Sciences and Engineering includes a set of rigorously reviewed world class manuscripts addressing and detailing state of the art research projects in the areas of Computer Science Computer Engineering and Information Sciences Innovations and Advanced Techniques in Computer and Information Sciences and Engineering includes selected papers from the conference proceedings of the International Conference on Systems Computing Sciences and Software Engineering SCSS 2006 which was part of the International Joint Conferences on Computer Information and Systems Sciences and Engineering CISSE 2006 All aspects of the conference were managed on line not only the reviewing submissions and registration processes but also the actual conference Conference participants authors presenters and attendees only needed an internet connection and sound available on their computers in order to be able to contribute and participate in this international ground breaking conference The on line structure of this high quality event allowed academic professionals and industry participants to contribute work and attend world class technical presentations based on rigorously refereed submissions live without the need for investing significant travel funds or time out of the office Suffice to say that CISSE received submissions from more than 70 countries for whose researchers this opportunity presented a much more affordable dynamic and well planned event to attend and submit their work to versus a classic on the ground conference The CISSE conference audio room provided superb audio even over low speed internet connections the ability to display PowerPoint presentations and cross platform compatibility the conferencing software runs on Windows Mac and any other operating system that supports Java In addition the conferencing system allowed for an unlimited number of participants which in turn granted CISSE the opportunity to allow all participants to attend all presentations as opposed to limiting the number of available seats for each session

Cooperative Information Agents V Matthias Klusch, Franco Zambonelli, 2003-06-30 These are the proceedings of the Fifth International Workshop on Cooperative Information Agents held in Modena Italy September 6 8 2001 Information agent technology has become one of the major key technologies for the Internet and the World Wide Web It mainly emerged as a response to the challenges of

cyberspace from both the technological and human user perspective Development of information agents requires expertise from different research disciplines such as Artificial Intelligence AI advanced databases and knowledge base systems distributed information systems information retrieval and Human Computer Interaction HCI The fifth international workshop on Cooperative Information Agents CIA continued the tradition by capturing the intrinsic interdisciplinary nature of the above research area by calling for contributions from different research communities and by promoting open and informative discussions on all related topics In keeping with tradition the workshop featured a sequence of regular and invited talks of excellence given by leading experts in the field This year the topics of the talks are mainly on the challenges of information agents in the upcoming age of ubiquitous and pervasive computing These challenges are in particular due to the necessity of an efficient utilization evolution and trust management of information agents for user oriented information search provision and visualization in networked computing environments with small mobile and embedded devices A different issue concerns the potential of agent based support of massive distributed data warehousing worldwide

Data Mining and Multi-agent Integration Longbing Cao, 2009-07-25 Data Mining and Multi agent Integration aims to reflect state of the art research and development of agent mining interaction and integration for short agent mining The book was motivated by increasing interest and work in the agents data mining and vice versa The interaction and integration comes about from the intrinsic challenges faced by agent technology and data mining respectively for instance multi agent systems face the problem of enhancing agent learning capability and avoiding the uncertainty of self organization and intelligence emergence Data mining if integrated into agent systems can greatly enhance the learning skills of agents and assist agents with predication of future states thus initiating follow up action or intervention The data mining community is now struggling with mining distributed interactive and heterogeneous data sources Agents can be used to manage such data sources for data access monitoring integration and

pattern merging from the infrastructure gateway message passing and pattern delivery perspectives These two examples illustrate the potential of agent mining in handling challenges in respective communities There is an excellent opportunity to create innovative dual agent mining interaction and integration technology tools and systems which will deliver results in one new technology
