Machines A Penser:

Philosophy and Scientific Realism J J C Smart, 2014-04-04 Originally published in 1963 In an introductory chapter the author argues that philosophy ought to be more than the art of clarifying thought and that it should concern itself with outlining a scientifically plausible world view Early chapters deal with phenomenism and the reality of theoretical entities and with the relation between the physical and biological sciences Free will issues of time and space and man's place in nature are covered in later chapters

Architecture Martin van der Linden, 2021-03-12 The question of what architecture is answered in this book with one sentence Architecture is space created for human activities The basic need to find food and water places these activities within a larger spatial field Humans have learned and found ways to adjust to the various contextual difficulties that they faced as they roamed the earth Thus rather than adapting humans have always tried to change the context to their activities Humanity has looked at the context not merely as a limitation but rather as a spatial situation filled with opportunities that allows through intellectual interaction to change these limitations Thus humanity has created within the world their own contextual bubble that firmly stands against the larger context it is set in The key notion of the book is that architecture is space carved out of and against the context and that this process is deterministic

Art as Organism Charissa N. Terranova, 2015-10-10 What if modernism had been characterised by evolving interconnected and multi sensory images rather than by the monolithic objects often described by its artists and theorists In this groundbreaking book Charissa Terranova unearths a forgotten narrative of modernism which charts the influence that biology General Systems Theory and cybernetics had on art in the twentieth century From kinetic and interactive art to early computer art and installations spanning an entire city she shows that the digital image was a rich and expansive artistic medium of modernism

Man a Machine Julien Offray de La Mettrie, 2019-11-21 In *Man a Machine* Julien Offray de La Mettrie presents a provocative and groundbreaking examination of

human existence through a mechanistic lens Written in the 18th century this philosophical treatise critiques the dualism of mind and body arguing instead for a materialist view that likens humans to complex machines La Mettrie's literary style melds sharp wit with rigorous argumentation positioning his work at the forefront of Enlightenment thought By drawing extensively from the natural sciences of his time he challenges prevailing notions of free will and consciousness suggesting that human behavior is governed by physical processes akin to those in machines Julien Offray de La Mettrie was a physician and philosopher whose radical ideas drew ire and admiration alike His experiences in the emerging scientific milieu particularly his exposure to the advancements in biology and mechanics compelled him to advocate for a rigorous materialism Additionally La Mettrie's own life beset by controversy and censure resonates through his writings and reflects a deep commitment to intellectual independence and bold inquiry into human nature *Man a Machine* is an essential read for anyone interested in the intersections of philosophy science and human identity La Mettrie's articulate defense of a mechanistic view of humanity invites readers to reconsider their own beliefs about the mind and body making the book a fundamental text for scholars and curious minds alike , **The Origins of Digital Computers** B.
