**Millennial Biology: The National Science Foundation and American Biology, 1975-2005** Donald J. McGraw, 2021-01-25 National Science Foundation NSF is a unique federal agency because it supports scientific research financially but does not engage in scientific work itself Its history is known only in part because the NSF is a vibrant expanding and living entity that makes the final telling of its story impossible Much can be learned from its beginning as well as its component parts If the founding of the NSF in 1950 was couched in an era of physics especially atomic physics certainly by the end of the 20th century and the beginning of the 21st biology was and remains the queen of sciences for the predictable future This book highlights the elite status of America s biological sciences as they were funded affected and to a very real degree interactively guided by the NSF It examines important events in the earlier history of the Foundation because they play strongly upon the development of the various biology directorates Issues such as education applied research medical science the National Institutes of Health the beginnings of biotechnology and other matters are also discussed

Social Science for What? Mark Solovey, 2020-07-07 How the NSF became an important yet controversial patron for the social sciences influencing debates over their scientific status and social relevance In the early Cold War years the U S government established the National Science Foundation NSF a civilian agency that soon became widely known for its dedication to supporting first rate science The agency s 1950 enabling legislation made no mention of the social sciences although it included a vague reference to other sciences Nevertheless as Mark Solovey shows in this book the NSF also soon became a major albeit controversial source of public funding for them Solovey s analysis underscores the long term impact of early developments when the NSF embraced a scientistic strategy wherein the natural sciences represented the gold standard and created a social science program limited to hard core studies Along the way Solovey shows how the NSF s efforts to support scholarship advanced training and educational programs were shaped by landmark scientific and political developments including McCarthyism Sputnik reform liberalism during the 1960s and a newly energized conservative movement during the 1970s and 1980s Finally he assesses the NSF s relevance in a post truth era questions the legacy of its scientistic strategy and calls for a separate social science agency a National Social Science Foundation Solovey s study of the battles over public funding is crucial for understanding the recent history of the social sciences as well as ongoing debates over their scientific status and social value

Science Funding Joseph Paul Martino, 1992-01-01 Americans have become resigned to seeing Congress vote money for porkbarrel projects of all kinds roads dams post offices military installations in the districts of influential legislators In recent years Congress has almost without public notice extended this form of vote buying and pandering into a

new domain science Where formerly scientific funding proposals were evaluated by outside experts on the basis of merit there is now an increasing consideration of congressional districts and fair geographical distribution In this ground breaking volume Joseph P Martino offers a critical examination of special interest funding and the danger it poses to the integrity of American society as a whole as well as to its scientific component Science Funding is distinguished by its comprehensive approach to the structural and historical background of the current situation It examines the history of science funding from the early twentieth century through present public vs to taxpayers instances of fraud and the effects of government funding for research in universities Martino s survey demonstrates conclusively that government has been inefficient in its funding capacity and that the shortcomings are inherent political criteria for the support of science congressional micromanagement freezing out of innovative ideas and the favoring of massive projects Big Science over small but significant experimental programs In his concluding chapter Martino provides an agenda for new thinking on the funding of science He proposes alternatives that suggest a plurality of approaches is preferable to the current monolithic model and shows how industrial support philanthropy and contributions from the public can be made more effective Science Funding is a major work on the interaction of science politics and society It will be of interest to sociologists policymakers and political scientist and the research science community

Foundations in the United States have long exerted considerable power over education and scholarly production. Although today's titans of philanthropy proclaim more loudly their desire to transform schools and universities than did some of their predecessors, philanthropic programs designed to reshape educational institutions are at least a century old. In *Foundations and American Political Science*, Emily Hauptmann focuses on the postwar Carnegie Ford and Rockefeller programs that reshaped political science. She shows how significant changes in the methods and research interests of postwar political scientists began as responses to the priorities set by their philanthropic patrons. Informed by years of research in foundation and university archives, *Foundations and American Political Science* follows the course of several streams of private philanthropic money as they wended their way through public universities and political science departments in the postwar period. The programs launched by the Carnegie Ford and Rockefeller philanthropies, as well as their reception at the universities of California and Michigan, steered political scientists towards particular problems and particular ways of studying them. The rise of statistical analyses of survey data, the decline of public administration, and persistent conflicts over the discipline's purpose and the best methods for understanding politics, Hauptmann argues, all had their roots in the ways that postwar universities responded to foundations programs. Additionally, the new emphasis universities placed on sponsored research sparked sharp disputes among political scientists over what should count as legitimate knowledge about politics and what the ultimate purpose of the discipline should be.

**The Experts' War on Poverty** Romain D. Huret, 2018-10-15 In the critically acclaimed *La Fin de la Pauvert*, Romain D. Huret identifies a network of experts who were dedicated to the post-World War II battle against poverty in the United States. John Angell's translation of Huret's work brings to light for an English-speaking audience this critical set of intellectuals working in federal government, academic institutions, and think tanks. Their efforts to create a policy bureaucracy to support federal socio-economic action spanned from the last days of the New Deal to the late 1960s when President Richard M. Nixon implemented the Family Assistance Plan. Often toiling in obscurity, this cadre of experts waged their own war not only on poverty but on the American political establishment. Their policy recommendations, as Huret clearly shows, often militated against the unscientific prejudices and electoral calculations that ruled Washington, D.C. politics. *The Experts' War on Poverty* highlights the metrics, research, and economic and social facts these social scientists employed in their work and thereby reveals the unstable institutional foundation of successive executive efforts to grapple with gross social and economic disparities in the United States. Huret argues that this internal war, coming at a time of great disruption due to the Cold War, undermined and fractured the institutional system officially directed at ending poverty. The official War on Poverty, which arguably reached its peak under President Lyndon B. Johnson, was thus fomented and maintained by a group of experts determined to fight poverty in radical ways that outstripped both the operational capacity of the federal government and the political will of a succession of presidents.

*Shaping Biology* Toby A. Appel,2003-04-30 Historians of the postwar transformation of science have focused largely on the physical sciences especially the relation of science to the military funding agencies In *Shaping Biology* Toby A Appel brings attention to the National Science Foundation and federal patronage of the biological sciences Scientists by training NSF biologists hoped in the 1950s that the new agency would become the federal government s chief patron for basic

research in biology the only agency to fund the entire range of biology from molecules to natural history museums for its own sake Appel traces how this vision emerged and developed over the next two and a half decades from the activities of NSF's Division of Biological and Medical Sciences founded in 1952 through the cold war expansion of the 1950s and 1960s and the constraints of the Vietnam War era to its reorganization out of existence in 1975 This history of NSF highlights fundamental tensions in science policy that remain relevant today the pull between basic and applied science funding individuals versus funding departments or institutions elitism versus distributive policies of funding issues of red tape and accountability In this NSF funded study Appel explores how the agency developed how it worked and what difference it made in shaping modern biology in the United States Based on formerly untapped archival sources as well as on interviews of participants and building upon prior historical literature *Shaping Biology* covers new ground and raises significant issues for further research on postwar biology and on federal funding of science in general

**Age of System** Hunter Heyck, 2015-09-01 In the years after World War II a new generation of scholars redefined the central concepts and practices of social science in America Before the Second World War social scientists struggled to define and defend their disciplines After the war high modern social scientists harnessed new resources in a quest to create a unified understanding of human behavior and to remake the world in the image of their new model man In *Age of System* Hunter Heyck explains why social scientists shaped by encounters with the ongoing organizational revolution and its revolutionary technologies of communication and control embraced a new and extremely influential perspective on science and nature one that conceived of all things in terms of system structure function organization and process He also explores how this emerging unified theory of human behavior implied a troubling similarity between humans and machines with freighted implications for individual liberty and self direction These social scientists trained a generation of decision makers in schools of business and public administration wrote the basic textbooks from

which millions learned how the economy society polity culture and even the mind worked and drafted the position papers books and articles that helped set the terms of public discourse in a new era of mass media think tanks and issue networks Drawing on close readings of key texts and a broad survey of more than 1 800 journal articles Heyck follows the dreams and the dreams of a generation of scholars that believed in the system He maps the broad landscape of changes in the social sciences focusing especially intently on the ideas and practices associated with modernization theory rational choice theory and modeling A highly accomplished historian Heyck relays this complicated story with unusual clarity

**Politics and Expertise** Zeynep Pamuk,2024-11-26 A new model for the relationship between science and democracy that spans policymaking the funding and conduct of research and our approach to new technologies Our ability to act on some of the most pressing issues of our time from pandemics and climate change to artificial intelligence and nuclear weapons depends on knowledge provided by scientists and other experts Meanwhile contemporary political life is increasingly characterized by problematic responses to expertise with denials of science on the one hand and complaints about the ignorance of the citizenry on the other Politics and Expertise offers a new model for the relationship between science and democracy rooted in the ways in which scientific knowledge and the political context of its use are imperfect Zeynep Pamuk starts from the fact that science is uncertain incomplete and contested and shows how scientists judgments about what is significant and useful shape the agenda and framing of political decisions The challenge Pamuk argues is to ensure that democracies can expose and contest the assumptions and omissions of scientists instead of choosing between wholesale acceptance or rejection of expertise To this end she argues for institutions that support scientific dissent proposes an adversarial science court to facilitate the public scrutiny of science reimagines structures for funding scientific research and provocatively suggests restricting research into dangerous new technologies Through rigorous philosophical analysis and fascinating examples Politics and Expertise moves the conversation beyond the dichotomy between technocracy and populism and develops a better answer for how to govern and use science democratically

New Foundations for Knowledge in Educational Administration, Policy, and Politics Douglas E. Mitchell,2013-04-03 This book probes the intellectual foundations of scholarly inquiry into educational administration policy and politics The question of whether and if so how social science theories and methods contribute to an understanding of these issues is hotly debated today Is there really a scientific basis for evaluating and or improving educational administration politics and policy The contributors all recognized scholars in the fields of educational organization administration policy and politics tackle the question of epistemology directly addressing anew what rules of scholarly conduct should guide research and practice in the field and how those rules of inquiry should guide the training of scholars and education professionals The Introduction places the chapters in a common intellectual framework for rebuilding confidence in social science inquiry and of the legitimacy of the university as an arbiter of scientific knowledge claims New Foundations for Knowledge in Educational Administration Policy and Politics Science and Sensationalism is
