**Whirlwind** Gregory Liedtke, 2016-09-19 Despite the best efforts of a number of historians many aspects of the ferocious struggle between Nazi Germany and the Soviet Union during the Second World War remain obscure or shrouded in myth One of the most persistent of these is the notion largely created by many former members of its own officer corps in the immediate postwar period that the German Army was a paragon of military professionalism and operational proficiency whose defeat on the Eastern Front was solely attributable to the amateurish meddling of a crazed former Corporal and the overwhelming numerical superiority of the Red Army A key pillar upon which the argument of German numerical weakness vis vis the Red Army has been constructed is the assertion that Germany was simply incapable of providing its army with the necessary quantities of men and equipment needed to replace its losses In consequence as their losses outstripped the availability of replacements German field formations became progressively weaker until they were incapable of securing their objectives or eventually of holding back the swelling might of the Red Army This work seeks to address the notion of German numerical weakness in terms of Germany s ability to replace its losses and regenerate its military strength and assess just how accurate this argument was during the crucial first half of the Russo German War June 1941 June 1943 Employing a host of primary documents and secondary literature it traces the development and many challenges of the German Army from the prewar period until the invasion of the Soviet Union in June 1941 It continues on to chart the first two years of the struggle between Germany and the Soviet Union with a particular emphasis upon the scale of German personnel and equipment losses and how well these were replaced It also includes extensive examinations into the host of mitigating factors that both dictated the course of Germany s campaign in the East and its replacement and regeneration capabilities In contrast to most accounts of the conflict this study finds that numerical weakness being the primary factor in the defeat of the Ostheer specifically as it relates to the strength and condition of the German units involved has been overemphasized and frequently exaggerated In fact Germany was actually able to regenerate its forces to a remarkable degree with a steady flow

of fresh men and equipment and German field divisions on the Eastern Front were usually far stronger than the accepted narratives of the war would have one believe      **Bibliography of Aeronautics** United States. US government fail to predict nuclear fire damage as it drew up plans to fight strategic nuclear war US bombing in World War II caused massive fire damage to Hiroshima and Nagasaki but later war plans took account only of damage from blast they completely ignored damage from atomic firestorms Recently a small group of researchers has shown that for modern nuclear weapons the destructiveness and lethality of nuclear mass fire often and predictably greatly exceeds that of nuclear blast This has major implications for defense policy the US government has underestimated the damage caused by nuclear weapons Lynn Eden finds and built far more warheads and far more destructive warheads than it needed for the Pentagon's war planning purposes How could this have happened The answer lies in how organizations frame the problems they try to solve In a narrative grounded in organization theory science and technology studies and primary historical sources including declassified documents and interviews Eden explains how the US Air Force's doctrine of precision bombing led to the development of very good predictions of nuclear blast a significant achievement but for many years to no development of organizational knowledge about nuclear fire Expert communities outside the military reinforced this disparity in organizational capability to predict blast damage but not fire damage Yet some innovation occurred and predictions of fire damage were nearly incorporated into nuclear war planning in the early 1990s The author explains how such a dramatic change almost happened and why it did not Whole World on Fire shows how well funded and highly professional organizations by focusing on what they do well and systematically excluding what they don't do well may build a poor representation of the world a self-reinforcing fallacy that can have serious consequences In a sweeping conclusion Eden shows the implications of the analysis for understanding such things as the sinking of the Titanic the collapse of the Tacoma Narrows Bridge and the poor fireproofing in the World Trade Center

**Military Adaptation in War** Williamson Murray, 2011-10-10 Military Adaptation in War addresses one of the most persistent problems that military organizations confront namely the problem of how to adapt under the trying terrifying conditions of war This work builds on the volume that Professor Williamson Murray edited with Allan Millett on military innovation a quite different issue though similar in some respects In Clausewitzian terms war is a contest an interactive duel which is of indeterminate length and presents a series of intractable problems at every level from policy and strategy down to the tactical Moreover the fact that the enemy is adapting at the same time presents military organizations with an ever changing set of conundrums that offer up no easy solutions As the British general James Wolfe suggested before Quebec War is an option of difficulties Dr Murray

provides an in depth analysis of the problems that military forces confront in adapting to these difficulties
