Military and Political Consequences of Atomic Energy

As a member of the Advisory Committee on Atomic Energy set up by His Majesty's Government to define British policy, Professor P. M. S. Blackett had found his views diverging more and more from those of his colleagues. To clarify his own thoughts on the subject he began an account of the probable influence of mass-destruction weapons on warfare, and this analysis led him to weigh the political implications of atomic energy.

The opening chapters of the book reveal to the general reader for the first time in surprising official data the true strategic effects of Allied bombing in the 1939-45 war. The author then proceeds to discuss what effect atomic weapons might have on future warfare. Will the atomic bomb be the single decisive weapon rendering all others obsolete? All current ideas on world control of atomic energy are scrutinized by the author in this section, fully discussed by Prof. Blackett, and by the estimates of its value for peaceful purposes, which are brilliantly summed up.

In a survey of the United Nations negotiations the various plans for control put forward by the Western nations and by Russia are critically examined. The final chapter "A Way Out" is realistic but hopeful, suggesting how future negotiations might avoid past errors.

Science and Technology in the Global Cold War Naomi Oreskes, John Krige, 2014-11-07 Investigations of how the global Cold War shaped national scientific and technological practices in fields from biomedicine to rocket science The Cold War period saw a dramatic expansion of state funded science and technology research Government and military patronage shaped Cold War technoscientific practices imposing methods that were project oriented team based and subject to national security restrictions These changes affected not just the arms race and the space race but also research in agriculture biomedicine computer science ecology meteorology and other fields This volume examines science and technology in the context of the Cold War considering whether the new institutions and institutional arrangements that emerged globally constrained technoscientific inquiry or offered greater opportunities for it The contributors find that whatever the particular science and whatever the political system in which that science was operating the knowledge that was produced bore some relation to the goals of the nation state These goals varied from nation to nation weapons research was emphasized in the United States and the Soviet Union for example but in France and China scientific independence and self reliance dominated The contributors also consider to what extent the changes to science and technology practices in this era were produced by the specific politics anxieties and aspirations of the Cold War Contributors Elena Aronova Erik M

Establishments and the Advancement of Science and Technology P. Forman, José M. Sánchez-Ron, 2001-11-30 To some
philosophers seeking to understand the human condition technology is a necessary guide But to think through the complex
human phenomenon of technology we must tackle philosophy of science philosophy of culture moral issues comparative
civilizational studies and the economics of specific industrial and military technologies in their historical contexts The philoso
pher wants to grasp the technological factor in this troubled world even as we see it is only one factor and that it does not
speak openly for itself Put directly our human troubles to a considerable extent have been transformed exaggerated distorted
even degraded perhaps transcended by what engi neers and scientists entrepreneurs and politicians have wrought But our
problems are ancient problems of dominations struggles survival values in conflict greed and insane sadisms To get some
conceptual light on the social reality which seems immediately to be so complicated a philosopher will need to learn from the
historians of technology A few years ago the philosopher Elisabeth Straker concluded that a his torical philosophy of
technology is required since history and history alone provides all those concepts that form part of the repertoire of the
philosoph ical analysis of technology And she added that this goes far beyond the triviality that like other cultural
achievements technology has its historical development Now historical comprehension is no substitute for a logical
methodology in the analysis of technological problems
