## **Military Radiobiology:**

**Military Radiobiology** James Conklin, 2012-12-02 Military Radiobiology provides an understanding of the sources and consequences of radiation exposure Military personnel must develop a working knowledge of postexposure effects in order to determine points of intervention The medical problems confronting military radiobiology include target damage which causes decrements in normal performance physiological injury and impairments of the immunological hematological system that lead to life threatening infectious complications The book begins by describing the properties of nuclear weapons including the mechanisms by which nuclear energy is stored within the nucleus its release and its conversion to those forces associated with nuclear weapons This is followed by discussions of the sources patterns radiological effects and management of nuclear fallout the biological effects of exposure to ionizing radiation released by nuclear weapons and effects of radiation on the immune system gastrointestinal physiology and cardiovascular function Subsequent chapters cover the diagnosis triage and treatment of radiation associated injuries internal contamination with radionuclides radioprotective drugs psychological reactions to nuclear confrontation and the response to a nuclear weapon accident

**Textbooks of Military Medicine: Military Preventive Medicine, Mobilization and Deployment, V. 1, 2003**, Textbooks of Military Medicine Patrick Kelley specialty editor Explores the various natural and manmade challenges faced by today's soldier upon mobilization and deployment Offers comprehensive research on a range of topics related to preventive medicine including a historic perspective on the principles of military preventive medicine national mobilization and training preparation for deployment and occupational and environmental issues during sustainment

Ciottone, 2023-03-07 While medical specialists in disaster mitigation preparedness and response are needed worldwide the initial phase of disaster response is almost entirely dependent upon local resources making it essential that all healthcare personnel have a working knowledge of the field and stand ready to integrate into the response system Ciottone's Disaster Medicine 3rd Edition is the most comprehensive reference available to help accomplish these goals in every community It thoroughly covers isolated domestic events as well as global disasters and humanitarian crises Dr Gregory Ciottone and more

**Radiation Hazards to Crews of Interplanetary Missions** National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Commission on Physical Sciences, Mathematics, and Applications, Task Group on the Biological Effects of Space Radiation, 1997-02-27 NASA's long range plans include possible human exploratory missions to the moon and Mars within the next quarter century Such missions beyond low Earth orbit will expose crews to transient radiation from solar particle events as well as continuous high energy galactic cosmic rays ranging from energetic protons

with low mean linear energy transfer LET to nuclei with high atomic numbers high energies and high LET Because the radiation levels in space are high and the missions long adequate shielding is needed to minimize the deleterious health effects of exposure to radiation The knowledge base needed to design shielding involves two sets of factors each with quantitative uncertainty the radiation spectra and doses present behind different types of shielding and the effects of the doses on relevant biological systems It is only prudent to design shielding that will protect the crew of spacecraft exposed to predicted high but uncertain levels of radiation and biological effects Because of the uncertainties regarding the degree and type of radiation protection needed a requirement for shielding to protect against large deleterious but uncertain biological effects may be imposed which in turn could result in an unacceptable cost to a mission It therefore is of interest to reduce these uncertainties in biological effects and shielding requirements for reasons of mission feasibility safety and cost
