Milky Way Galaxy And Statistical Cosmology 1890 1924:

The Milky Way Galaxy and Statistical Cosmology, 1890-1924 Erich Robert Paul, 1993-11-26 Paul describes the rise of statistical cosmology and how it has set the stage for many of the most significant developments of twentieth century astronomy

The Life and Works of J. C. Kapteyn E. Robert Paul, 2012-12-06 Among the most influential world renowned scientists during the early decades of the twentieth century was the Dutch astronomer Jacobus Cornelius Kapteyn 1851 1922 Kapteyn's influence resulted from and contributed to the golden age of Dutch science In the words of the brilliant English astrophysicist Arthur S Eddington Holland has given many scientific leaders to the world it is doubtful whether any other nation in proportion to its size can show so fine a record J C Kapteyn was among the most distinguished of its sons a truly great astronomer The present text is an English translation of Kapteyn's 1928 Dutch biography by his daughter Henrietta Hertzprung Kapteyn While the original biography suffers from but in many ways is also enriched by the emotional excesses of a loving daughter writing of her famous father this new translation provides an annotated assessment of Kapteyn as family man scientist and world leader This new volume also opens up to a much wider reading public many of the enormously rich contributions not only of Kapteyn the man but also of the Dutch to the emergence of astronomy as a major intellectual force in the world Perhaps equally important the translated biography reproduces many biographical and technical details from Kapteyn's correspondence with numerous other scientists and scholars Access to the Kapteyn biography becomes an archival treasure for future studies dealing with Kapteyn himself as well as with the history of both modern and Dutch astronomy and with the rise of international astronomy

Science, Religion, and Mormon Cosmology Erich Robert Paul, 1992 Merrill who urged a unique vision of reality that shaped a Mormon eschatology He shows how authorities eventually retreated from the perception of reality as true and adopted a scientifically less secure position in order to protect their theology an eventuality which ultimately resulted in a reactionary response to science within Mormonism

The Legacy of J.C. Kapteyn Piet C. van der Kruit, Klaas van Berkel, 2012-12-06 Jacobus Cornelius Kapteyn 1851 1922 of the University of Groningen was one of the foremost astronomers of his time resulting in a leading role internationally of Dutch astronomy throughout the twentieth century This volume which is the proceedings of a special legacy symposium at the celebration of the 385th anniversary of the University of Groningen addresses Kapteyn's influence on the development of modern astronomy through studies of his pioneering work on statistical astronomy and the Structure of the Sidereal System and his leadership in establishing international collaborations in particular the Plan of Selected Areas In addition to historical studies related to Kapteyn's person work international collaborations and organisational efforts the volume discusses the influence of Kapteyn on the internationalisation of astronomy and on contemporary astronomy It also provides an inventory of Kapteyn's correspondence

The Cambridge Concise History of Astronomy Michael

Hoskin, 1999-03-18 Astronomy is one of the oldest sciences and one which has repeatedly led to fundamental changes in our view of the world. This book covers the history of our study of the cosmos from prehistory through to a survey of modern astronomy and astrophysics sure to be of interest to future historians of twentieth century astronomy. It does not attempt to cover everything but deliberately concentrates on the important themes and topics. These include stellar astronomy in the seventeenth and eighteenth centuries at the time subordinate to the study of the solar system but the source of many important concepts in modern astronomy and the Copernican revolution which led to the challenge of ancient authorities in many areas not just astronomy. This is an essential text for students of the history of science and for students of astronomy who require a historical background to their studies.

Modern Theories of the Universe Michael J. Crowe, 1994-01-01

This book provides an introduction to the fundamentals of stellar astronomy, a history of astronomy and an account of how the science of astronomy challenged traditional philosophical and theological beliefs. Throughout the text are readings from the writings of scientists who contributed most significantly to the development of astronomy.

The Oxford Handbook of the History of Physics Jed Z. Buchwald, Robert Fox, 2013-10 This Oxford Handbook brings together contributions by leading authorities on key areas of the history of physics since the seventeenth century. In a single volume it offers a comprehensive introduction to scholarly contributions that have tended to be dispersed in journals and books not easily accessible to the student or general reader.

Jacobus Cornelius Kapteyn Pieter C. van der Kruit, 2014-11-18 Jacobus C. Kapteyn 1851-1922 was a Dutch astronomer who contributed heavily to major catalogs of star positions such as the Cape Photographic Durchmusterung and the Harvard-Groningen Durchmusterung and arranged extensive international collaboration through his Plan of Selected Areas. He contributed to the establishment of statistical astronomy and the structure and dynamics of the Sidereal System. All aspects of Kapteyn's life are discussed from his birth in Barneveld, the Netherlands, to his death in Amsterdam and his entire resume of scientific achievements. In between, Kapteyn had some conflicts with others in his field, especially after the world became divided on how to handle scientific contributions from Germany post World War I. Both Kapteyn's struggles and achievements are written against the backdrop of both the historical context of the world at that time as well as the scientific one.

Minding the Heavens Leila Belkora, 2021-05-12 Praise for the first edition: A terrific blend of the science and the history. Martha Haynes Goldwin Smith, Professor of Astronomy, Cornell University, New York, USA. The book is a treat. Highly recommended for public and academic libraries. Peter Hepburn, now Head Librarian, College of the Canyons, Santa Clarita, California, USA. Today we recognize that we live on a planet circling the sun, that our sun is just one of billions of stars in the galaxy we call the Milky Way, and that our galaxy is but one of billions born out of the Big Bang. Yet as recently as the early twentieth century, the general public and even astronomers had vague and confused notions about what lay beyond the visible stars. Can we see to the edge of the universe? Do we live in a system that would look from a distance like

a spiral nebula This fully updated second edition of *Minding the Heavens The Story of Our Discovery of the Milky Way* explores how we learned that we live in a galaxy in a universe composed of galaxies and unseen mysterious dark matter The story unfolds through short biographies of seven astronomers Thomas Wright William Herschel and Wilhelm Struve of the eighteenth and nineteenth centuries the transitional figure of William Huggins and Jacobus Kapteyn Harlow Shapley and Edwin Hubble of the modern big telescope era Each contributed key insights to our present understanding of where we live in the cosmos and each was directly inspired by the work of his predecessors to decipher the construction of the heavens Along the way the narrative weaves in the contributions of those in supportive roles including Caroline Herschel William's sister and the first woman paid to do astronomy and Martha Shapley a mathematician in her own right who carried out calculations for her spouse Through this historical perspective readers will gain a new appreciation of our magnificent Milky Way galaxy and of the beauties of the night sky from ghostly nebulae to sparkling star clusters Features Fully updated throughout to reflect the latest in our understanding of the Milky Way from our central supermassive black hole to the prospect of future mergers with other galaxies in our Local Group Explains the significance of current research including from the Gaia mission mapping our galaxy in unprecedented detail Unique and broadly appealing approach A biographical framework and ample illustrations lead the reader by easy enjoyable steps to a well rounded understanding of the history of astronomy Leila Belkora Ph D Astrophysics is a science writer She earned her doctorate from the University of Colorado Boulder specializing in solar radio astronomy She has previously taught university physics astronomy and communication for engineers She lives in Southern California and enjoys local astronomy outreach activities [Comets, Cosmology and the Big Bang](#) Allan Chapman,2018-11-23 This book will take the story of astronomy on from where Allan Chapman left it in *Stargazers* and bring it almost up to date with the developments and discoveries of the last three centuries He covers the big names Halley Hooke Herschel Hubble and Hoyle and includes the women who pushed astronomy forward from Caroline Herschel to the Victorian women astronomers He includes the big discoveries and the huge ideas from the Milky Way to the Big Bang the mighty atom and the question of life on other planets And he brings in the contributions made in the US culminating in their race with the USSR to get a man on the moon before turning to the explosion of interest in astronomy that was pioneered by Sir Patrick Moore and *The Sky at Night* **Measuring the Universe** Stephen Webb,1999-03-18 A unified treatment of the various techniques used for distance determination The text begins by describing methods to measure distances on Earth then gradually climbs the distance ladder to enable us to estimate the distance to the farthest objects ending with a discussion of particle horizons within an expanding and inflationary universe Aimed at first year astronomy and astrophysics undergraduates the book emphasises general physical principles rather than mathematical detail and is enhanced and complemented by many worked examples questions and problem solving exercises at the end of each chapter **Science in the Early Twentieth Century** Jacob Darwin Hamblin,2005-03-08 The first A Z resource on the

history of science from 1900 to 1950 examining the dynamic between science and the social political and cultural forces of the era Though many books have highlighted the great scientific discoveries of the early 1900s few have tackled the wider context in which these milestones were achieved Science in the Early Twentieth Century covers everything from quantum physics to penicillin and more including all the major scientific developments of the period detailing not only the scientists and their work but also the social and political forces that dominated the scientific agenda Over 200 A Z entries chronicle the landmark scientific discoveries and personalities of the period including such scientific giants as Albert Einstein and Marie Curie Placing science firmly within its cultural context this thoroughly researched accessible resource takes a uniquely interdisciplinary approach making it an invaluable text for scientists educators students and the general reader Cosmos John North,2008-07-15 The definitive history of humanity's search to find its place within the universe North charts the history of astronomy and cosmology from the Paleolithic period to the present day **The Century of Space Science** J.A. Bleeker,Johannes Geiss,M. Huber,2012-12-06 One of the most attractive features of the young discipline of Space Science is that many of the original pioneers and key players involved are still available to describe their field Hence at this point in history we are in a unique position to gain first hand insight into the field and its development To this end The Century of Space Science a scholarly authoritative reference book presents a chapter by chapter retrospective of space science as studied in the 20th century The level is academic and focuses on key discoveries how these were arrived at their scientific consequences and how these discoveries advanced the thoughts of the key players involved With over 90 world class contributors such as James Van Allen Cornelis de Jager Eugene Parker Reimar Lüst and Ernst Stuhlinger and with a Foreword by Lodewijk Woltjer past ESO Director General this book will be immensely useful to readers in the fields of space science astronomy and the history of science Both academic institutions and researchers will find that this major reference work makes an invaluable addition to their collection Conceptions of Cosmos Helge Kragh,2007 This book is a historical account of how natural philosophers and scientists have endeavoured to understand the universe at large first in a mythical and later in a scientific context Starting with the creation stories of ancient Egypt and Mesopotamia the book covers all the major events in theoretical and observational cosmology from Aristotle's cosmos over the Copernican revolution to the discovery of the accelerating universe in the late 1990s It presents cosmology as a subject including scientific as well as non scientific dimensions and tells the story of how it developed into a true science of the heavens Contrary to most other books in the history of cosmology it offers an integrated account of the development with emphasis on the modern Einsteinian and post Einsteinian period Starting in the pre literary era it carries the story onwards to the early years of the 21st century *The Fourth Source* Robert J. Tuttle,2012 This book describes how the effects of nature's own nuclear reactors have shaped the Earth the Solar System the Universe and the history of life as we know it It focuses on observed effects that are poorly explained by our standard theories identifies certain errors in those theories and shows how these effects are caused

by natural nuclear fission reactors The theory of Plate Tectonics is wrong and it is shown that expansion of the Earth causes continental drift A physically reasonable mechanism is proposed for expansion and observational data are presented to show that this occurs Evolution is explained as punctuated equilibrium with mutations caused by abrupt surges of radiation and related life forms that have been interpreted as separate species are actually the result of radiation injury This view is particularly effective as applied to humans The ability of the dinosaurs to live so large is explained by use of Earth Expansion and a more massive atmosphere to provide buoyancy and effective transpiration of oxygen These effects also explain how pterodactyls and ancient birds could fly Expansion induced by impacts at the end of the Cretaceous caused the atmosphere to thin and the dinosaurs collapsed Analysis of geological and biological data supports this The astronomical distance scale is shown to be wrong based on the misconception that trigonometric parallax is an absolute measurement It isn't and the method is led astray by the overwhelming number of asteroidal fragments masquerading as stars The measurements of an expanding Universe are shown to be in error and an expanding Universe is not needed by an alternative interpretation of Einstein's equations This interpretation is based on the equal creation of matter and antimatter which is known to occur Spiral galaxies are not vast Island Universes of stars as we have thought but are shown to be the strewn fields of debris from the nuclear fission detonation of distant planets The Universe is not made up of 96% Dark Matter and Dark Energy but is instead very ordinary Abundant evidence and references provide support for all these interpretations This book opens new opportunities for research by correcting several fundamental errors in our concepts of the Earth Life and the Universe

Masters of the Universe Helge Kragh, 2015 This book tells the fascinating history of cosmology using a series of fictitious interview transcripts with the field's leading scientists including giants such as Albert Einstein Edwin Hubble and George Gamow to give the reader a lively and almost authentic impression of the problems that faced this early generation of cosmologists

Globular Clusters C. Martinez Roger, I. Perez Fournon, F. Sanchez, 1999-10-28 An accessible introduction to globular clusters for graduate students and a comprehensive and up to date reference for researchers

The Einstein Tower Klaus Hentschel, 1997 Focusing on the Einstein Tower an architecturally historic observatory built in Potsdam in 1920 this book investigates German scientific life by blending biography architectural history scientific theory and research and scientific politics
