National Bureau of Standards,1943 *Making Health Services More Accessible in Developing Countries* H. Uchimura,2009-09-16 Health is increasingly a critical concern in the context of development This book examines the function of health systems particularly the key factors finance human resources pharmaceuticals public facilities and stresses the importance of improving access to health services in developing countries

Current Topics in Coronary Research Colin Bloor,2013-03-09 How can you adequately honor a man of deeds with mere words Dr Donald Eaton Gregg is recognized throughout the scientific world for his distinguished contributions to our knowledge of the coronary circulation his advances in experimental instrumentation and design his scientific integrity and his lasting influence on other investigators His research associates over the years are now liberally scattered over the entire world Their accomplishments and activities reflect the quality of their training in his Department of Cardiorespiratory Diseases at the Walter Reed Army Institute of Research The positions of prestige occupied by these men attest to Dr Gregg s ability to select and inspire men of talent yet in his usual modest way he insists that he was only fortunate to be in the right place at the right time Thus at the time of Dr Gregg s retirement as Chief of the Department of Cardiorespiratory Diseases a position he has held since 1950 his associates thought that a scientific symposium was the most appropriate way to honor a man of his stature Accordingly on March 29 30 1973 a Symposium on Current Topics in Coronary Research was held at the Walter Reed Army Institute of Research Its objectives were to define our present state of knowl edge and more importantly define the basic questions requiring further experimentation in four major areas of coronary research i e **List of**

Genetic Engineering of Animals J. Evans,2012-12-06 J Warren Evans Department of Animal Science Texas A M University College Station Texas 77843 In the near future improvement of domestic animals for the production of food and fiber is poised to undergo a revolution by the utilization of recent breakthroughs and advances in molecular genetics embryo manipula tions and gene transfer systems Utilization of these techniques will have a wide impact on animal agriculture by improvement of production effi ciency via manipulation and control of many physiological systems The end result will be to decrease production costs increase food production and quality and lower food costs Health and well being of domestic and other animals will be improved as a result of new methods of disease diagnosis vaccine production and disease prevention practices Genetic engineering also offers the possibility of utilizing animals for the development of pharmaceutical products to benefit society Research progress will be en hanced via manipulation of the gene pool The objectives of this Conference were to discuss the current status of animal bioengineering and to realistically assess the potential applica tions of current and future genetic technologies for the production of food and fiber to meet the needs of our hungry world and to provide

animal scientists who may wish to utilize bioengineering in current or future research programs with current background information regarding concepts applications and methodologies Korean War Comic Books Leonard Rifas, 2021-04-30 Comic books have presented fictional and fact based stories of the Korean War as it was being fought and afterward Comparing these comics with events that inspired them offers a deeper understanding of the comics industry America's forgotten war and the anti comics movement championed by psychiatrist Fredric Wertham who criticized their brutalization of the imagination Comics both newsstand offerings and government propaganda used fictions to justify the unpopular war as necessary and moral This book examines the dramatization of events and issues including the war's origins germ warfare brainwashing Cold War espionage the nuclear threat African Americans in the military mistreatment of POWs and atrocities

Aneuploidy Vicki Dellarco, 2012-12-06 The Symposium on Aneuploidy Etiology and Mechanisms was held at the Carnegie Institution of Washington Auditorium from March 25-29 1985 This Symposium developed as a consequence of the concern of the Environmental Protection Agency with the support of the National Institute of Environmental Health Sciences about human exposure to environmental agents that cause aneuploidy The program was chosen to explore what is currently known about the underlying causes the origins and the extent of the problem of human aneuploidy and whether exposure to environmental agents is associated with an increased incidence of aneuploidy in humans Basic research findings in the area of mitosis and meiosis were presented and related to possible mechanisms of how aneuploidy may be produced spontaneously and chemically A survey of data regarding the chemical induction of aneuploidy in experimental organisms was presented Outstanding scientists from different fields were invited to cover a broad perspective of aneuploidy from the molecular aspects to the human situation We hope that the publication of the proceedings will share the enthusiasm of the meeting and its scientific content The topic of aneuploidy has received little attention and it is the purpose of this Volume to establish a scientific basis for assessing health risks posed by environmental exposures to aneuploidy inducing chemicals Vicki L DeJlarco Peter E Voytek Alexander Hollaender vii ACKNOWLEDGEMENT The Editors of the proceedings of the Symposium on Aneuploidy wish to acknowledge the support of Dr Elizabeth L Molecular Biology of Aging Avril D. Woodhead, Anthony D. Blackett, Alexander Hollaender, 2013-11-22 It is delightful but humbling to find my face at the start of these Proceedings there are innumerable other faces which could equally well stand there from among the band who have foregathered at every gerontology conference since the subject was launched in its present form but I deeply appreciate being there Gerontology did not grow by accident Its present standing is the fruit of careful planning undertaken by European and American scientists back in the 1950s In those days it was still a fringe science and the conspirators had much the standing of the 1920s Interplanetary Society The United States itself is the offspring of conspiracy for when the results of conspiracy are beneficent the conspirators become Founding Fathers This has been the case with gerontology The present meeting is especially gratifying because the papers have been recitals of normal hard science investigation We had to get

through the rigors of a long period of semantic argument and a long period of one shot general theories before this kind of meeting normal in all other research fields could take place It was also necessary to breed in the menagerie a generation of excellent investigators aware of the theoretical background but unintimidated by it who share our conviction that human aging is comprehensible and probably controllable and who go into the laboratory to attack specifics **Japanization at Work** John Bratton,1994-06-10 Japanese management techniques have attracted considerable interest amongst managers and academics Using case studies in manufacturing this book goes beyond generalization in discussing the impacts of Japanese style management on relations between management and workers John Bratton presents a theoretical framework within which Japanese management can be analysed The author describes the changes often on the words of the people directly involved The book explores the hypothesis that just in time production increases managerial control through the application of new technology and worker generated forms of control *Basic and Applied Mutagenesis A.*

Muhammed,2012-12-06 The aim of the editors of this volume is to use basic and applied studies in the field of mutagenesis to approach a problem of especial concern The problem is that of the usage of toxic chemicals particularly agricultural chemicals in ever increasing quantities in those parts of the world that feed the most people Agricultural chemicals that are in use in Pakistan are emphasized here These are the same chemicals that are in use throughout the developing world although the quantities of the different types that are used may vary from country to country and from region to region within countries A number of these chemicals can no longer be sold in Europe or in the United States and it is often difficult to identify a scientific reason as to why they are sold at all It is ironic that toxic chemicals are used as a humanitarian device to rid the world of Pestilence and Famine two of the Horsemen of the Apocalypse If we do not wish poisonous chemicals to become the fifth Horseman of the Apocalypse then we must begin now to identify and regulate the large scale usage of toxic substances everywhere **Extrachromosomal Elements in Lower Eukaryotes** Reed Wickner,2012-12-06

Antimutagenesis and Anticarcinogenesis Mechanisms Delbert M. Shankel,Philip E. Hartman,Tsuneo Kada,Alexander Hollaender,Claire M. Wilson,Gregory Kuny,2013-03-13 Assessment of Risk from Low-Level Exposure to Radiation and Chemicals A. D. Woodhead,2013-11-21 The present workshop had its origins in discussions among Alexander Hollaender Oddvar Nygaard Donald Borg Richard Setlow and Victor Bond on the need for a symposium that would deal with a broad spectrum of pressing subjects related to the physics chemistry and biological actions of ionizing radiations and the theoretical and practical problems of risk assessment It soon became apparent that the spectrum of subjects considered was too broad for the desired depth of coverage in fact it seemed unlikely that the conference participants would have the background knowledge to span the gamut Therefore two separate meetings were decided upon the first of which Comparison of Mechanisms of Carcinogenesis by Radiation and Chemical Agents was held at the National Bureau of Standards Gaithersburg on December 6 7 1983 The meeting was sponsored by the NCI The second meeting has emerged as the present

workshop at Brookhaven National Laboratory An interface between the two conferences has been provided by Michael Fry and Donald Borg who have summarized the salient points emanating from the NCI Symposium We intended that the first conference should focus on the basic mechanisms of radiation and chemical carcinogenesis while the second the present meeting would emphasize exposure response relationships particularly the theoretical and practical similarities and differences between exposure to chemical carcinogens compared to exposure to ionizing radiation

Political Humor in a Changing Media Landscape Jody C Baumgartner, Amy B. Becker, 2020-07-07 In the past decade various studies have examined how political humor may influence various political attitudes and voting behavior whether it affects learning cognition and media literacy how it might shape political participation how people process different forms of political humor and more This book is devoted to anticipating and addressing where the field of political humor and its effects will move in the next generation of scholarship exploring the continued evolution of the study of political humor as well as the normative implications of these developments It includes research accounting for important changes and developments on the ground in the political humor landscape These include the fact that the cadre of late night television hosts have completely changed in the past 3 years there are now more late night television choices and many hosts have become more overtly political in their presentations Recommended for scholars of communication media studies and political science

Mechanisms of DNA Damage and Repair Michael G. Simic, Lawrence Grossman, Arthur C. Upton, David S. Bergtold, 2013-11-21 This book is based on the papers presented at the conference on Mechanisms of DNA Damage and Repair Implications for Carcinogenesis and Risk Assessment held at the National Bureau of Standards on June 27 1985 This volume deals with mechanisms of DNA damage and repair at the molecular level consequences of unrepaired or misrepaired damage with major emphasis on carcinogenesis drugs which bind selectively to altered and potentially damaging DNA sequences and potential utilization of DNA damage as an endpoint for assessing risks of UV light ionizing radiations chemicals drugs and hazardous agents in foods Because the induction of mutations by radiation and genotoxic chemicals has been observed to follow one hit kinetics in some instances it is generally assumed that any level of exposure to a DNA damaging agent may increase the risk of genetic disease or cancer in an exposed population At the same time however there is evidence that although the DNA of living cells is continually damaged by natural background radiation free radicals and other naturally occurring processes most of the damage is normally repaired
