Mindblindness An Essay On Autism And Theory Of Mind:

Mindblindness Simon Baron-Cohen,1997-01-22 In Mindblindness Simon Baron Cohen presents a model of the evolution and development of mindreading He argues that we mindread all the time effortlessly automatically and mostly unconsciously It is the natural way in which we interpret predict and participate in social behavior and communication We ascribe mental states to people states such as thoughts desires knowledge and intentions Building on many years of research Baron Cohen concludes that children with autism suffer from mindblindness as a result of a selective impairment in mindreading For these children the world is essentially devoid of mental things Baron Cohen develops a theory that draws on data from comparative psychology from developmental and from neuropsychology He argues that specific neurocognitive mechanisms have evolved that allow us to mindread to make sense of actions to interpret gazes as meaningful and to decode the language of the eyes A Bradford Book The MIT Encyclopedia of the Cognitive Sciences (MITECS) Robert A. Perspective Taking: building a neurocognitive framework for integrating the “social” and the “spatial” Klaus Kessler,Sarah H Creem-Regehr,Antonia Hamilton,2015-06-08 Background Interacting with other people involves spatial awareness of one s own body and the other s body and viewpoint In the past social cognition has focused largely on belief

reasoning which is abstracted away from spatial and bodily representations while there is a strong tradition of work on spatial and object representation which does not consider social interactions These two domains have flourished independently A small but growing body of research examines how awareness of space and body relates to the ability to interpret and interact with others This also builds on the growing awareness that many cognitive processes are embodied which could be of relevance for the integration of the social and spatial domains Online mental transformations of spatial representations have been shown to rely on simulated body movements and various aspects of social interaction have been related to the simulation of a conspecific's behaviour within the observer's bodily repertoire Both dimensions of embodied transformations or mappings seem to serve the purpose of establishing alignment between the observer and a target In spatial cognition research the target is spatially defined as a particular viewpoint or frame of reference FOR yet in social interaction research another viewpoint is occupied by another's mind which crucially requires perspective taking in the sense of considering what another person experiences from a different viewpoint Perspective taking has been studied in different ways within developmental psychology cognitive psychology psycholinguistics neuropsychology and cognitive neuroscience over the last few decades yet integrative approaches for channelling all information into a unified account of perspective taking and viewpoint transformations have not been presented so far Aims This Research Topic aims to bring together the social and the spatial and to highlight findings and methods which can unify research across areas In particular the topic aims to advance our current theories and set the stage for future developments of the field by clarifying and linking theoretical concepts across disciplines Scope The focus of this Research Topic is on the SPATIAL and the SOCIAL and we anticipate that all submissions will touch on both aspects and will explicitly attempt to bridge conceptual gaps Social questions could include questions of how people judge another person's viewpoint or spatial capacities or how they imagine themselves from different points of view Spatial questions could include consideration of different physical configurations of the body and the arrangement of different viewpoints including mental rotation of objects or viewpoints that have social relevance Questions could also relate to how individual differences in personality sex development culture species etc influence or determine social and spatial perspective judgements Many different methods can be used to explore perspective taking including mental chronometry behavioural tasks EEG MEG and fMRI child development neuropsychological patients virtual reality and more Bringing together results and approaches from these different domains is a key aim of this Research Topic We welcome submissions of experimental papers reviews and theory papers which cover these topics

Cognition, Mindreading, and Shakespeare's Characters Nicholas R. Helms, 2019-01-16 *Cognition Mindreading and Shakespeare's Characters* brings cognitive science to Shakespeare applying contemporary theories of mindreading to Shakespeare's construction of character Building on the work of the philosopher Alvin Goldman and cognitive literary critics such as Bruce McConachie and Lisa Zunshine Nicholas Helms uses the language of mindreading to analyze inference and imagination

throughout Shakespeare's plays dwelling at length on misread minds in King Lear Much Ado About Nothing Othello and Romeo and Juliet Shakespeare manipulates the mechanics of misreading to cultivate an early modern audience of adept mindreaders an audience that continues to contemplate the moral ramifications of Shakespeare's characters even after leaving the playhouse Using this cognitive literary approach Helms reveals how misreading fuels Shakespeare's enduring popular appeal and investigates the ways in which Shakespeare's characters can both corroborate and challenge contemporary cognitive theories of the human mind *Origins of the Social Mind* Bruce J. Ellis, David F.

Proyer, Hsueh-Chih Chen, 2019-08-12 The emergence of Positive Psychology has highlighted the importance of studying the good life and how to attain it Positive life outcomes such as well being thriving flourishing and happiness were discussed and investigated Among them different orientations to happiness were identified such as a life of pleasure life of meaning and life of engagement Other outcomes such as subjective and objective fulfillment in life or societal recognition have been less studied Among the characteristics that facilitate positive outcomes the VIA classification of strength and virtues distinguishes 24 strengths with humor playfulness being one of them Only a small segment of humor entered the definition of humor as

character strengths namely the parts that contain some goodness Humor as a character strength facilitates a lot of positive outcomes such as positive emotions and positive relationships and there is a lightness accompanying humor playfulness The field is broader though and transcends the definition of humor as used in positive psychology in at least two ways First there is actually a family of overlapping but still distinct concepts with different research traditions We include next to humor and types of humor also laughter playfulness and cheerfulness We think that more research is needed on how they do overlap and what makes them distinct Second while positive psychology is interested in the goodness of we do want to stress that there is the need to study the non virtuous parts as well That is laughter may not only be expressing amusement but scorn directed at people humor may be benevolent but there is also sarcasm and playfulness may elicit positive emotions but also risk prone and immature types of behavior Therefore the aim of this Research Topic was to collect current perspectives on humor playfulness laughter and cheerfulness in both adults and children to study their full diversity but also interrelations and overlapping features to introduce new instruments or ways for their assessment in future studies and to study their causes and consequences in a variety of life domains We encouraged studies on differences due to gender or nationality the embodiment in different groups e g class clowns psychiatric patients or whether or not they can be trained We also welcomed contributions from adjacent disciplines e g education leisure studies or therapy counseling and different regions of the earth The outcome is a set of 33 manuscripts from altogether 101 authors Not all areas are covered and not all aims were met while we made progress there is much left to do In this sense the merging of these topics may be the first milestone but like every milestone it only marks the beginning of a long journey

Theory of Mind and Science Fiction N.

Pagan,2014-01-06 Theory of Mind and Science Fiction shows how theory of mind provides an exciting new way to think about science fiction and conversely how science fiction sheds light not only on theory of mind but also empathy morality and the nature of our humanity

Ethics and Neurodiversity Alexandra Perry,Anthony Yankowski,2014-09-26 Increasingly voices in the growing neurodiversity movement are alleging that individuals who are neurologically divergent such as those with conditions related to bipolar disorder autism schizophrenia and depression must struggle for their civil rights This movement therefore raises questions of interest to scholars in the humanities and social sciences as well as to concerned members of the general public These questions have to do with such matters as the accessibility of knowledge about mental health autonomy and community within the realm of the mentally ill and accommodation in civil society and its institutions The contributors to Ethics and Neurodiversity explore these questions and the traditional philosophical questions related to them The authors pay special attention to the need to examine the policies and practices of institutions such as higher education social support and healthcare
