Mind's I Douglas Hofstadter, Daniel Clement Dennett, 1981-11-26 ISBN 0576504624X LCCN 8166099      **The Mind's I** Douglas R. Hofstadter, Daniel Clement Dennett, 2000 Essays from some of the 20th century's greatest thinkers explore topics as diverse as artificial intelligence evolution science fiction philosophy reductionism and consciousness presenting a variety of conflicting visions of the self and the soul Illustrations      The Mind's I Douglas R. Hofstadter, Daniel C. Dennett, 1985-04-01      **The mind's I : fantasies and reflections on self and soul** Douglas R. Hofstadter, 1982      *The Mind's I* Douglas R. Hofstadter, 2002 This book asks such questions as What is the mind Who am I and Can machines think It provides a selection of thought experiments to entice and tease the imagination      **The Mind's I : Fantasies and Reflections on Self and Soul** Daniel Clement Dennett, Douglas R. Hofstadter, 1986      Psychiatric Polarities Phillip R. Slavney, Paul R. McHugh, 2016-01-15 A lively exploration of mind and brain conscious and unconscious patient and client In this companion volume to their widely acclaimed Perspectives of Psychiatry Phillip R Slavney M D and Paul R McHugh M D argue that the discontinuity of brain and mind is the source of much of psychiatry's discord for it leads psychiatrists to think about their discipline in terms of polar opposites conscious or unconscious explanation or understanding paternalism or autonomy Psychiatric Polarities brings together the history of ideas and such clinical issues as suicide and bipolar disorder to identify describe and debate these and other polar oppositions that arise from psychiatry's inherent ambiguity There is no single conceptual perspective that is sufficient for all of psychiatry's concerns Slavney and McHugh observe yet it is both possible and necessary to transcend the denominational conflicts that plague the field In Psychiatric Polarities their examination of these conflicts demonstrates how a methodological approach can help to resolve disagreements rooted in partisan commitments      **Views into the Chinese Room** John Preston, Mark Bishop, 2002-08-22 to follow      **Literature, Psychoanalysis and the New Sciences of Mind** Leonard Jackson, 2014-09-11 At a time when psychoanalysis is attacked by biologists psychologists and literary critics alike this book offers a radical defence Literature Psychoanalysis and the New Sciences of Mind gives a clear introduction to the theories of Freud and Jung the strange linguistic rewriting of Freud by Jacques Lacan It explores the extraordinary variety of ways in which these writings have been applied to literature and literary theory But for the first time they are put in the context of recent biological theories of mind and sexuality      The Digital Mind Arlindo Oliveira, 2018-03-09 How developments in science and technology may enable the emergence of purely digital minds intelligent machines equal to or greater in power than the human brain What do computers cells and brains have in common Computers are electronic devices designed by humans cells are biological entities crafted by evolution brains are the containers and creators of our minds But all are in one way or another information processing devices The power of the human brain is so far unequaled by any existing machine or known living being Over eons of evolution the brain has enabled us to develop tools and technology to make our lives easier Our brains have even allowed us to develop

computers that are almost as powerful as the human brain itself In this book Arlindo Oliveira describes how advances in science and technology could enable us to create digital minds Exponential growth is a pattern built deep into the scheme of life but technological change now promises to outstrip even evolutionary change Oliveira describes technological and scientific advances that range from the discovery of laws that control the behavior of the electromagnetic fields to the development of computers He calls natural selection the ultimate algorithm discusses genetics and the evolution of the central nervous system and describes the role that computer imaging has played in understanding and modeling the brain Having considered the behavior of the unique system that creates a mind he turns to an unavoidable question Is the human brain the only system that can host a mind If digital minds come into existence and Oliveira says it is difficult to argue that they will not what are the social legal and ethical implications Will digital minds be our partners or our rivals **The Mind's**

**We** Diane Gillespie,1992 In a journey to the theoretical roots of human psychology Diane Gillespie defends the concept of contextualism in a field in which mechanism has prevailed Gillespie explains both theories in a historical overview of cognitive psychology and then contrasts them in three chapters on visual perception memory and categorization She clarifies the inadequacy of mechanism as the sole model of cognition by including narratives based on her own life that focus on the dynamic ways we interact with the world Providing a subtheme of contemporary concern Gillespie argues that a psychological theory open to everyday contexts has important implications for women whose perspectives have been underrepresented in the literature of cognitive psychology She does not posit contextualism as the next exclusive viewpoint but suggests instead a pluralism with no one viewpoint overshadowing the others Novelistic Inquiries into the Mind

Grzegorz Maziarczyk,Joanna Klara Teske,2016-09-23 Novelistic Inquiries into the Mind traces the multiple relations between the mind and the contemporary novel The contributors here examine various types of narrative fiction ranging from the postmodern novels of J M Coetzee and Ian McEwan through the experimental prose of Leslie Scalapino to the popular fiction of James Dashner and Christopher Moore On the one hand they investigate novelistic representations of various mind related issues including different states of consciousness Alzheimer s disease thought experiments and formation of the self On the other by analysing and evaluating in these contexts such narrative devices as unreliable narration development of conceptual networks or multimodal integration of verbal and non verbal semiotic resources they exemplify the multiplicity of techniques whereby the novel can explore the intricacies of mental processes Taken together the essays collected here demonstrate the potential of the novel as genre for representing the mind In its exploration of the problems involved in the linguistic construction of reality the cognitive function of art and the uncertain status of consciousness the contemporary novel thus reflects the mind s urge to understand itself as well as possible meanings of its own perceptions creations and projections

**How the Mind Uses the Brain** Ralph Ellis And Natika Newton,2011-01-19 With recent advances in artificial intelligence and neuroscience the nature of consciousness and the relation between mind and brain have become the most

hotly debated topics in philosophy Yet agreement looks farther away than ever Ellis and Newton explain and argue for a bold new approach called enactivism showing how it cuts through various difficulties which have stumped previous theories At first glance enactivism itself seems open to fatal objections but the authors demonstrate in detail that these objections disappear on closer examination How the Mind Uses the Brain represents a sharp break with the tradition which sees consciousness as the final step in a chain of causes and effects with information processing going on in the intervening steps This tradition has reduced consciousness to an appendage According to Ellis and Newton consciousness and emotions are central aspects of the organisms ongoing self organizational activity driving information processing rather than merely responding to it

**Philosophy for Everyone** Matthew Chrisman, Duncan Pritchard, Guy Fletcher, Elinor Mason, Jane Suilin Lavelle, Michela Massimi, Alasdair Richmond, Dave Ward, 2016-07-15 Philosophy for Everyone begins by explaining what philosophy is before exploring the questions and issues at the foundation of this important subject Key topics in this new edition and their areas of focus include Moral philosophy the nature of our moral judgments and reactions whether they aim at some objective moral truth or are mere personal or cultural preferences and the possibility of moral responsibility given the sorts of things that cause behavior Political philosophy fundamental questions about the nature of states and their relationship to the citizens within those states Epistemology what our knowledge of the world and ourselves consists in and how we come to have it and whether we should

form beliefs by trusting what other people tell us Philosophy of mind what it means for something to have a mind and how minds should be understood and explained Philosophy of science foundational conceptual issues in scientific research and practice such as whether scientific theories are true and Metaphysics fundamental questions about the nature of reality such as whether we have free will or whether time travel is possible This book is designed to be used in conjunction with the free Introduction to Philosophy MOOC massive open online course created by the University of Edinburgh's Eidyn research centre and hosted by the Coursera platform [www.coursera.org/course/introphil](http://www.coursera.org/course/introphil) This book is also highly recommended for anyone looking for a short overview of this fascinating discipline

What is Misrepresentation? Krystyna Bielecka, 2025-05-23 This book aims to justify and systematize the desiderata that a satisfying philosophical account of mental representations should meet which is consistent with common sense practice and scientific research According to the author the most important aspect of any satisfactory account of mental representation is the ability to determine that a given representation is incorrect and to identify the nature of the error The book analyzes selected contemporary theories of mental representations with respect to major desiderata as well as the minor desiderata that they subsume discussing the requirements for the philosophical accounts of particular types of mental representations Since none of the previously proposed concepts meet this requirement satisfactorily the author proposes an alternative theory of misrepresentation which is based on the idea that epistemic accuracy is what minds care about According to the author's findings cognitive systems rely on complex devices to check for coherence between these representations In turn the ideas presented here support the active role of mental representation in practice as an error checking device in agreement with previous teleosemantics accounts
