**Mine Warfare at Sea** Howard S. Levie, 2023-12-11 *Mine Warfare* United States. Congress. House. Committee on Armed Services. Subcommittee on Seapower and Strategic and Critical Materials, 1988 **Mine Warfare at Sea** Howard S. Levie, 1992 This book includes a study of the history of mine warfare at sea from the earliest days to the present time It will be of interest to military lawyers and to all those concerned with the conduct and control of warfare At the technical level it is intended for laymen While there is a chapter dealing with many technical matters relating to both mine warfare at sea and mine countermeasures the sole purpose of that chapter is to give the non technician whether naval officer or civilian a basic understanding of various categories of sea mines and their accessories and of mine countermeasure gear It assumes that like the author the reader will have a minimum of electrical and mechanical knowledge However it is believed that after finishing this volume the reader will have a much better understanding of the part that mines have played in warfare at sea in past conflicts as well as the part they may be expected to play in any future conflict Howard S Levie is Professor Emeritus of Law at Saint Louis University School of Law and Adjunct Professor of International Law at the U S Naval War College Naval Mine Warfare National Research Council, Division on Engineering and Physical Sciences, Naval Studies Board, Committee for Mine Warfare Assessment, 2001-09-19 Sea mines have been important in naval warfare throughout history and continue to be so today They have caused major damage to naval forces slowed or stopped naval actions and commercial shipping and forced the alteration of strategic and tactical plans The threat posed by sea mines continues and is increasing in today s world of inexpensive advanced electronics nanotechnology and multiple potential enemies some of which are difficult to identify This report assesses the Department of the Navy s capabilities for conducting naval mining and countermining sea operations *Naval Mine Warfare* National Research Council, Division on Engineering and Physical Sciences, Naval Studies Board, Committee for Mine Warfare Assessment, 2001-10-19 Sea mines have been important in naval warfare throughout history and continue to be so today They have caused major damage to naval forces slowed or stopped naval actions and commercial shipping and forced the alteration of strategic and tactical plans The threat posed by sea mines continues and is increasing in today s world of inexpensive advanced electronics nanotechnology and multiple potential enemies some of which are difficult to identify This report assesses the Department of the Navy s capabilities for conducting naval mining and countermining sea operations **Weapons that Wait** Gregory Kemenyi Hartmann, 1979 **21st Century Complete Guide to Naval Mine Warfare** Department of Defense, U. Bushnell has become known as the father of mine warfare. As a student at Yale University he worked on the development of underwater explosives. In his research he discovered that gunpowder could be exploded underwater. During the American Revolution Bushnell was authorized to design a sea mine usually referred to as a torpedo by Bushnell to be used against the British fleet. 21st Century U S Navy Mine Warfare Ensuring Global Access and Commerce. In February 1991 the Navy lost command of the sea in the North Arabian Gulf to more than a thousand mines that had been sown by Iraqi forces. Mines severely damaged two Navy warships and commanders aborted an amphibious assault for fear of even more casualties. Spurred on by this experience the Navy has taken consistent aggressive and focused action to ensure that it is prepared for all future mine events.

**Solving the Mine Countermeasures Problem: A Matter of Focus and Priority** This document reviews mine countermeasure operations and how they impact on current national security and national military strategies as well as service doctrine.

**Shallow Water Mine Countermeasure Capability for USMC Ground Reconnaissance Assets** As the Marine Corps looks to the future with its concept of expeditionary maneuver warfare, EMW shallow water mines remain a show stopper to the Corps forcible entry requirement. With limited Naval assets available, MAGTF commanders are still dependent on Marine ground reconnaissance assets for amphibious reconnaissance of potential beach landing sites to include the detection of shallow water mines.

**The Operational Effects of Mine Warfare** This paper demonstrates that naval mines are a threat to the operational commander and that there are actions he can take to reduce the operational effects of mine warfare. The first section demonstrates that mine warfare is a pertinent problem for the operational commander by examining three principle relationships.

**Sweeping Changes for Mine Warfare: Controlling the Mine Threat** This report proposes that the U S Navy deter and if necessary combat potential minelayers by pursuing a pro active offensive mine warfare strategy. Central to this proposed strategy is the development, acquisition and use of Remote Controlled RECO mines. It is argued that given the historical problems the United States has had in the area of naval mine warfare, a strategy aimed at the aggressive deterrence of enemy mine laying be embraced so as to project forces ashore in future amphibious operations.

**Inadequate Mine Countermeasure Systems and Capabilities for Future Amphibious Operations** When a one thousand dollar mine can severely damage a one billion dollar ship, it is time to do something about it.

**Edney: The significance of mines to naval operations has been recognized in modern warfare.** For example, during the Korean War the Chief of Naval Operations, Admiral Forrest P. Sherman, observed before an amphibious assault on Wonsan: "When you can't go where you want to when you want to, you haven't got command of the sea. And command of the sea is a rock bottom foundation for all our war plans. We've been very submarine conscious and air conscious. Now we're getting mine conscious."

**The Development of Mine Warfare** Norman E. Youngblood, 2006-06-30. In 1997 the International Campaign to Ban Landmines (ICBL) coordinated the Convention on the Prohibition of the Use, Stockpiling, Production and Transfer of Anti Personnel Mines and on their Destruction. As of mid 2005, 145 states had signed the agreement. The ICBL's efforts were in large part a response to the

Lindgren USN,2015-11-06 This study investigates the impact of Confederate naval mine warfare against the operations of the U S Navy during the Civil War Mine warfare was a cost effective method for the Confederacy to defend its long coastline and inland waterways A wide variety of fixed moored and drifting mines were deployed and used with effect at locations along the Atlantic coast the Gulf coast and along rivers including those in the Mississippi basin Despite loss and damage to thirty five Union naval vessels mine use had virtually no strategic impact upon the course of the war At the operational level effects were apparent Federal naval operations at Charleston and on the Roanoke River were frustrated in large part because of the mine threat The impact of mines was great at the tactical level These cost effective weapons caused delays in Union operations resulted in involved countermine operations and caused fear and apprehension in crews The lessons from the mine warfare experience of the Civil War are still applicable in today s warfare environment Naval mines are a preferred weapon of minor naval powers and the U S Navy will be required to deal with this threat when operating along the World s coastal regions
