David R. Bridgland,Andy Howard,Mark J. White,Tom S. White,2014-03-31 This volume is an integrated overview and synthesis of available data relating to the Quaternary evolution of the River Trent It provides detailed descriptions of the Pleistocene sedimentary records from the Trent its tributaries and related drainage systems a sedimentary record that spans a period of approximately half a million years and the biostratigraphical and archaeological material preserved therein Significant new data are presented from recently discovered sites of geological and archaeological importance including previously unrecognised fluvial deposits as well as novel analyses such as mathematical modelling of fluvial incision as recorded by the river terrace deposits In combination with a thorough review of the literature on the Trent these new data have contributed to revised chronostratigraphical and palaeogeographical frameworks for central England and revealed the complexity of the Pleistocene fluvial and glacial records in this region The fragmentary Trent terrace sequence is an important element of wider reconstructions of Pleistocene palaeodrainage in Britain providing a link between the records preserved in the English Midlands and those in East Anglia **Geothermal Energy Update** ,1981 *Solar Energy Update* ,1981 **Subject Catalog, 1982** Library of Congress,1982 *Scientific and Technical Aerospace Reports* ,1981 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database List of Bureau of Mines Publications and Articles ... with Subject and Author Index United States. Quaternary of Scotland J.E. Gordon,D.G. Sutherland,2012-12-06 In describing the geomorphological heritage of Scotland this volume offers a remarkable account of how the natural environment responded in terms of landforms processes and plant communities to severe climatic change as the Quaternary era progressed over the last two million years This legacy as preserved in the 138 nationally important GCR sites described documents a remarkable diversity of landforms in a relatively small area The rugged highland contrast with the rolling hills and flat plains found further south while the western and northern islands together with the highly indented coastline add further to the scenic diversity How this variety of landscapes came into being the forces which shaped it and the climatic extremes which drove it are the themes explored in this volume **Library of Congress Catalogs** Library of Congress,1983 *Report* ,1974 *Report* Institute of Geological Sciences (Great Britain),1974
