Transforming Socio-Natures in Turkey Onur İnal, Ethemcan Turhan, 2019-07-09 This book is an exploration of the environmental makings and contested historical trajectories of environmental change in Turkey Despite the recent proliferation of studies on the political economy of environmental change and urban transformation until now there has not been a sufficiently complete treatment of Turkey's troubled environments which live on the edge both geographically between Europe and Middle East and politically between democracy and totalitarianism The contributors to *Transforming Socio Natures in Turkey* use the toolbox of environmental humanities to explore the main political cultural and historical factors relating to the country's socio environmental problems This leads not only to a better grounding of some of the historical and contemporary debates on the environment in Turkey but also a deeper understanding of the multiplicity of framings around more than human interactions in the country in a time of authoritarian populism This book will be of interest not only to students of Turkey from a variety of social science and humanities disciplines but also contribute to the larger debates on environmental change and developmentalism in the context of a global populist turn

Neutrality in Contemporary International Law James Upcher, 2020-04-30 The law of neutrality the corpus of legal rules regulating the relationship between belligerents and States taking no part in hostilities assumed its modern form in a world in which the waging of war was unconstrained The neutral State enjoyed territorial inviolability to the extent that it adhered to the obligations attaching to its neutral status and thus the law of neutrality provided spatial parameters for the conduct of hostilities Yet the basis on which the law of neutrality developed the extra legal character of war no longer exists Does the law of neutrality continue to survive in the modern era If so how has it been modified by the profound changes in the law on the use of force and the law of armed conflict This book argues that neutrality endures as a key concept of the law of armed conflict The interaction between belligerent and nonbelligerent States continues to require legal regulation as demonstrated by a number of recent conflicts including the Iraq War of 2003 and the Mavi Marmara incident of 2010 By

Nature's Patterns and the Fractional Calculus Bruce J. West, 2017-09-11 Complexity increases with increasing system size in everything from organisms to organizations The nonlinear dependence of a system's functionality on its size by means of an allometry relation is argued to be a consequence of their joint dependency on complexity information In turn complexity is proven to be the source of allometry and to provide a new kind of force entailed by a system's information gradient Based on first principles the scaling behavior of the probability density function is determined by the exact solution to a set of fractional differential equations The resulting lowest order moments in system size and functionality gives rise to the empirical allometry relations Taking examples from various topics in nature the book is of interest to researchers in applied mathematics as well as investigators in the natural social physical and life sciences Contents Complexity Empirical allometry Statistics scaling and simulation Allometry theories Strange kinetics Fractional probability calculus
