Rudman,2010-01-26 Rudman explores the facisnating history of mathematics among the Babylonians and Egyptians He formulates a Babylonian Theorem which he shows was used to derive the Pythagorean Theorem about a millennium before its purported discovery by Pythagoras *Sports Biomechanics* Prof. Anthony J. Blazeovich,2013-06-30 For coaches athletes and students of biomechanics the new edition of *Sports Biomechanics* The basics answers real world questions in sports using easily comprehensible language and clear and concise diagrams Each chapter is devoted to answering questions in a single area of sports biomechanics with the scientific underpinnings of sports performance clearly explained Biomechanics is simply the science of mechanics a particular section of physics as it relates to the human body In the sport sciences biomechanists do just about everything including improving aerodynamics of vehicles improving swim stroke technique to maximise swimming propulsion and optimising running technique to increase running speed or efficiency Biomechanics is a core subject on all sports science courses and undergraduates must complete this module in their first and often second year Because of the use of maths and physics to explain biomechanical concepts students often find it difficult to grasp the basic elements of biomechanics Anthony Blazeovich s book is designed to explain to students the key concepts of biomechanics using clear examples tying all theory to practical examples to help students relate the biomechanics principles to improving in their coaching and performing **Computers and Data Processing** Harvey M. who suffered from irrational concerns about his work worrying especially about opposition from the scientific establishment of the day Johnson's clear and concise explanations will acquaint the nonspecialist reader with such seemingly esoteric concepts as microstates macrostates fluctuations the distribution of energy log functions and equilibrium He describes Boltzmann's relationships with other scientists including Max Planck and Henri Poincaré and finally imagines an alternative ending in which Boltzmann lived on and died of natural causes

Energy and the Unexpected Keith James Laidler, 2002

From the steam engine to $E=mc^2$ and beyond the concept of energy offers an essential key to our understanding of the Universe In this entertaining and highly readable book Professor Laidler explains the concept of energy and its characteristics as they have been discovered over the past two centuries Having looked at energy on a small scale and then on the scale of the Universe itself he shows the link with chaos theory according to which the unexpected is inevitable

A Concrete Introduction to Higher Algebra Lindsay Childs, 2012-12-06 This book is written as an introduction to higher algebra for students with a background of a year of calculus The book developed out of a set of notes for a sophomore junior level course at the State University of New York at Albany entitled Classical Algebra In the 1950s and before it was customary for the first course in algebra to be a course in the theory of equations consisting of a study of polynomials over the complex real and rational numbers and to a lesser extent linear algebra from the point of view of systems of equations Abstract algebra that is the study of groups rings and fields usually followed such a course In recent years the theory of equations course has disappeared Without it students entering abstract algebra courses tend to lack the experience in the algebraic theory of the basic classical examples of the integers and polynomials necessary for understanding and more importantly for appreciating the formalism To meet this problem several texts have recently appeared introducing algebra through number theory

Minimization of the Total Heat Input for Manned Vehicles Entering the Earth's Atmosphere at Hyperbolic Speeds Alvin Seiff, Michael E. Tauber, 1966 The use of conical entry bodies to control the radiative and minimize the total heat input to manned vehicles is investigated with an imposed acceleration limit on two types of hyperbolic shallow angle entry into the Earth's atmosphere The local Reynolds number is limited to retain laminar boundary layer The equations permit any desired values of the acceleration and local Reynolds number limits and of the body radius body density and heat shield material properties Numerical examples are given for a range of Reynolds number limits three body radii and two heat shield materials
