

The Meaning of Caring in Nursing Practice

Introduction

The dynamic essence of nursing is due to caring. Unfortunately, many different terms such as care, care-giving, care receiving, nursing care, etc., are used interchangeably which promotes confusion. Thus, the concept of care can be considered one of the least understood parts of nursing. It is important to note that because there are multiple ways to define caring from different paradigms, the frame of reference is imperative to understand the definition.

The purpose of this paper is to analyze three conceptualizations of caring and discuss the relevance of incorporating theory into practice.

Watson's Theory of Caring

Watson [1] defines caring as: "the moral ideal of nursing whereby the end is protection, enhancement, and preservation of human dignity. Human caring involves values, a will and a commitment to care, knowledge, caring actions, and consequences. All of human caring is related to inter subjective human response to health-illness; environmental-personal interaction; a knowledge of the nurse caring process; self knowledge, knowledge of one's power and transaction limitations" (p. 501). Moreover, Watson posits that "the essence of the value of human care and caring may be futile unless it contributes to a philosophy of action. . . . The actual concrete action of caring can transcend the value (and pass it on). . . . The value of caring is grounded in the self-transcending creative nurse" (p. 52). She further believes that human-to-human caring interactions of nursing cannot be validated or understood using a "positivistic, deterministic, materialistic mind set" [1].

Watson [1] acknowledges the differences between traditional science and human science. They are as follows:

Traditional Science Content	Nursing Human Science for Caring
Normative	Ignative
Reductionistic	Transactional
Mechanistic	Metaphysical, Humanistic-contextual
Method-centered	Phenomena-centered
Disease-centered	Person-experience centered
Pathology-physiology, the physical body	Human responses to illness and personal meanings of human condition
Ethics of 'science'	Human-social ethics- morality
More quantitative	More qualitative
Absolutes, givens, laws	Relativism, probabilities
Human as object	Human as subject
Objective experiences	Subjective-intersubjective experiences
Facts	Experience, meaning
Nonethetic	Idiographic +/- nomothetic
Concrete-observable	Abstract- may or may not "be seen"

 (bio-psycho-socio-cultural-spiritual-being)

"Real" is that which is measurable, observable, and knowable

Dialectical, philosophical, metaphysical

Science as creative process of discovery

Human = mind/body/spirit gestalt of whole being (not only more than sum of parts, but different)

"Real" is abstract, largely subjective as well as objective, but is may or may not ever be fully known, observable, fully measured, what is "real" holds mystery and unknowns yet to be discovered

A nurse is required to perform certain acts for her patient which are legally and ethically binding. Watson [1] posits that the value of human care and caring is more than the mere action of performance. Caring involves a sense of self identity and spirit of the person. It involves a pure sense of dedication and commitment to the patient. A specific action of caring may transcend the value because it is "grounded in the self-transcending creative nurse" [1].

The following are Watson's [1] eleven assumptions related to Human Care Values in Nursing:

1. Care and love are the most universal, the most tremendous, and the most mysterious of cosmic forces; they comprise the primal and universal psychic energy.
2. Often these needs are overlooked; or we know people need each other in loving and caring ways, but often we do not behave well toward each other. If our humanness is to survive, however, we need to become more caring and loving to nourish our humanity and evolve as a civilization and love together.
3. Since nursing is a caring profession, its ability to sustain its caring ideal and ideology in practice will affect the human development of civilization and determine nursing's contribution to society.

Nursing Case Studies in Caring Charlotte Barry, Shirley Gordon, Beth King, 2015-06-04 Uncovers the art and science of nursing grounded in caring for all nursing situations Grounded in the belief that caring is the central domain of nursing this innovative book presents a new approach to nursing situations These are case studies depicting shared lived experiences between the nurse and patient that are studied from various theoretical perspectives They are designed to foster a nursing

student's ability to care effectively for a patient family or group. Each case study features a compelling scenario that engages the reader to feel and fully participate in the caring experience. The book presents a variety of situations that new and experienced nurses are likely to encounter, many of which present scenarios that require caring for a patient under difficult or complex circumstances. The book addresses the need, as defined by leading health care and nursing education organizations, for the study of nursing from a contextual, story-oriented perspective. It is based on the Barry Gordon King Teaching Learning Nursing Framework developed as a guide to uncover the art and science of nursing grounded in caring in all nursing situations. Following a description of the framework's foundational concepts, the text describes how to use nursing situations to facilitate learning. The scenarios offer detailed practical strategies for analyzing nursing situations in ways that bring to life the simple and complex practice of nursing grounded in caring. These real-life stories also help students understand the impact of health conditions on individuals and families, thereby fostering empathy. Case studies address nursing situations across a variety of populations, health concerns, and practice settings. Using multiple ways of knowing and understanding each scenario concludes with direct and reflective questions that help students develop nursing knowledge and skills. The book serves as a core resource for nurse educators and students at all levels seeking to study the art and science of nursing grounded in caring. Additionally, the book is a resource for in-service educators in health care systems that specifically address caring as an essential value for practice.

Tim Porter O'Grady DM EdD APRN FAAN FACCWS Associate Professor Leadership Scholar College of Nursing and Healthcare Innovation Arizona State University Clinical Professor Leadership Scholar College of Nursing The Ohio State University. This is a time-tested practical guide for nurses and other healthcare professionals who wish to transform their healthcare systems based on caring values and the promotion of intra and inter professional dialogue among stakeholders. It describes a theoretically grounded model created by nurses for transforming the culture of healthcare systems at all levels and features tested strategies that facilitate accessibility, efficiency, effectiveness, and enhanced outcomes. At its most basic level, this model, the Dance of Caring Persons, expresses the fundamental beliefs and attitudes that each person in the healthcare system lives

caring meaningfully in unique and valuable ways and the contributions of each person to the whole of the enterprise have a significant place within it. The book features successful examples of how various units of the healthcare system can apply specific strategies to their inter and intra professional work and how to engage and sustain authentic dialogue among and between stakeholders. Chapters feature information from a great variety of health professionals that represent a broad range of participants in healthcare. Detailed information is presented in a variety of formats ranging from formal written responses to chapter contents to transcriptions of small group conversations relating to the topic at hand. The book reflects the interests of such major stakeholders as patients and families, nurses, physicians, and other primary and adjunctive care providers, ancillary service providers, administrators and managers, and all other individuals involved in the many aspects of organizational models and delivery of health care and human resource functions and outcomes. Each chapter includes questions to consider and suggested resources to help with implementation of strategies. The text incorporates professional standards and essentials from the Joint Commission ANCC and AACN DNP Key Features. Presents a theoretically grounded, proven caring-based model for healthcare system change for all stakeholders across the continuum of care. Provides practical strategies for transformation in all aspects of a healthcare system applicable across the range of health services. Describes how healthcare system change happens, who initiates it, and how to sustain it through caring science. Includes success stories from patients and their families, nurses, physicians, ancillary service providers, healthcare administrators, and others. Promotes inter and intra professional dialogue and collaboration.

Anthology on Caring Peggy L. Chinn, 1991. The chapters in this Anthology on Caring, in the words of editor Peggy L. Chinn, PhD, RN, FAAN, express the idea, the ideal, and the practice of caring. This collection of articles presents many views of the caring phenomenon in nursing. Chapters such as "The Importance of Knowing What to Care About" and "Caring for the Environment" underscore the importance of caring to healthy living. Read about culture-specific care in close-knit societies such as the Old Order Amish. Rediscover why social activism is necessary in Health Promotion, Caring, and Nursing. These essays will remind us, as nurses, to care for ourselves and the people around us.

A Global Agenda for Caring Delores A. Gaut, 1993. Compiling the work of nurse scholars from five continents, this book shows how caring's applicability cuts across cultural and geographic borders. A Global Agenda for Caring is a significant contribution to the world's body of research on caring, and it brings us closer to realizing the full potential of studying caring worldwide.

Caring Gosia M. Brykczynska, 1997. Caring: The Compassion and Wisdom of Nursing is a collection of essays that will encourage nurses to consider more deeply what caring means to them, to their patients, to society, and to their profession. Aimed at a wide audience of nurses, this text is a valuable resource for all health professionals interested in caring and the arena in which it takes place. The authors look at the cultural and historical origins of caring, the practical and professional responsibilities that caring involves, the personal and professional strengths necessary in order to care, and the role that the arts and humanities play in promoting caring sensitivities. This unique approach to the subject puts caring into a
