Women's Health in an Interdisciplinary Dimension – Determinants of Nutritional Disorders Karolina Krupa-Kotara,Patxi León Guereño,Izabella Uchmanowicz ,Michał Czapla,2024-10-10 The increase in the prevalence of diet related diseases in the female population since the second half of the 20th century is likely

the result of increasing life expectancy combined with increased exposure to environmental factors including lifestyle To date the exact mechanism for the development of many nutrition related diseases remains unknown Mainly because of the multifactorial etiology It is often forgotten that human biology and pathophysiology are regulated at the level of gene expression Genetics loads the gun but the environment pulls the trigger by Judith Stern illustrates the complex relationship between diseases and environmental factors The analogy accurately conveys that disease phenotypes are not only the result of interactions between different genes but also between genes and environmental determinants *Nutritional Concerns of Women* Dorothy Klimis-Zacas,Ira Wolinsky,2003-08-13 Women s health and nutrition concerns have moved to the forefront of research with the mandate by the National Institutes of Health to include women in formerly male only studies assessing responses to diet and disease This second edition of a popular and highly praised resource provides new research results that detail the prevalence of and diffe **Women's Empowerment and Nutrition** Mara van den Bold,Agnes R.

Quisumbing,Stuart Gillespie,2013-11-01 Many development programs that aim to alleviate poverty and improve investments in human capital consider women s empowerment a key pathway by which to achieve impact and often target women as their main beneficiaries Despite this women s empowerment dimensions are often not rigorously measured and are at times merely assumed This paper starts by reflecting on the concept and measurement of women s empowerment and then reviews some of the structural interventions that aim to influence underlying gender norms in society and eradicate gender discrimination It then proceeds to review the evidence of the impact of three types of interventions cash transfer programs agricultural interventions and microfinance programs on women s empowerment nutrition or both Qualitative evidence on conditional cash transfer CCT programs generally points to positive impacts on women s empowerment although quantitative research findings are more heterogenous CCT programs produce mixed results on long term nutritional status and very limited evidence exists of their impacts on micronutrient status The little evidence available on unconditional cash transters UCT indicates mixed impacts on women s empowerment and positive impacts on nutrition however recent reviews comparing CCT and UCT programs have found little difference in terms of their effects on stunting and they have found that conditionality is less important than other factors such as access to healthcare and child age and sex Evidence of cash transfer program impacts depending on the gender of the transfer recipient or on the conditionality is also mixed although CCTs with non health conditionalities seem to have negative impacts on nutritional status The impacts of programs based on the gender of the transfer recipient show mixed results but almost no experimental evidence exists of testing gender differentiated impacts of a single program Agricultural interventions specifically home gardening and dairy projects show mixed impacts on women s empowerment measures such as time workload and control over income but they demonstrate very little impact on nutrition Implementation modalities are shown to determine differential impacts in terms of empowerment and nutrition outcomes With regard to the impact of microfinance on women s empowerment evidence is also

mixed although more recent reviews do not find any impact on women's empowerment The impact of microfinance on nutritional status is mixed with no evidence of impact on micronutrient status Across all three types of programs cash transfer programs agricultural interventions and microfinance programs very little evidence exists on pathways of impact and evidence is often biased toward a particular region The paper ends with a discussion of the findings and remaining evidence gaps and an outline of recommendations for research

Purnima,2020-06-16 Despite improvements over the last decade or more India still accounts for a large proportion of the global prevalence of maternal and child undernutrition We use a cluster randomized controlled design and two waves of panel data on more than 2000 households from Bihar to analyse the impact on diet quality and anthropometry of a health and nutrition intervention delivered through an at scale women s self help group SHGs platform We find that the intervention had small but significant impacts on women and children s dietary diversity with the main impacts coming from an increase in the consumption of fruits and vegetables and dairy however it had no impact on women s body mass index We identify several potential pathways to impact To the extent that SHGs can effect broad based social change their current reach to millions of women makes them a powerful platform for accelerating improvements in maternal and child health and nutrition outcomes

**The Importance of Women's Status for Child Nutrition in Developing Countries** Lisa C. Smith,2003 Until recently the role of women s social status in determining their children s nutritional health went largely unnoticed That is until researchers began to ponder the Asian Enigma the question of why malnutrition is much more prevalent among children in South Asia than in Sub Saharan Africa even though South Asia surpasses Sub Saharan Africa in most of the principal determinants of child nutrition This report uses data from 36 countries in three developing regions to establish empirically that women s status defined as women s power relative to men s is an important determinant of children s nutritional status It finds that the pathways through which status influences child nutrition and the strength of that influence differ considerably from one region to another Where women s status is low this research proves unequivocally that policies to eradicate gender discrimination not only benefit women but also their children Nutrition in Women's Health Debra A.

Cantor,2019-10-29 In Tourism and Maternal Health Allison R Cantor examines prenatal health in Monteverde Costa Rica in the context of a tourism driven nutrition transition In today s fast paced globally connected society even rural regions like the central highlands of Costa Rica can be affected by the rise in chronic noncommunicable diseases Cantor highlights the connection between these diseases and changes in local food systems She stresses the key role that culture plays in finding ways to mediate the negative impacts of a changing food environment and stresses the important role that practice oriented research plays in unpacking the complex relationship between global policy and community health      **The Impact of Irrigation on Nutrition, Health, and Gender** Laia Domenech,2013-04-11 Agriculture in Africa south of the Sahara SSA is still largely rainfed SSA also exhibits the lowest crop yields for major staples in the world largely due to low use of irrigation and fertilizer Rainfed agriculture poses growing production risks with increased climate variability and change At the same time smallholder irrigation in the region developed rapidly over the past decade albeit starting from very low levels In addition to largely demand driven irrigation development by smallholders there is a significant push by donors for large scale irrigation development as well as some push for smallholder irrigation There has also been a long standing debate about whether irrigation in SSA should be large scale or small scale to achieve its potential However given the potentially high rewards but also high possibility of failure the assessment of irrigation potential must go beyond large scale versus small scale to integrate concerns regarding environmental sustainability resource use efficiency nutrition and health impacts and women s empowerment The hypothesis underlying this review paper is that how irrigation gets deployed in SSA will be decisive not only for environmental sustainability such as deciding remaining forest cover in the region and poverty reduction but also for health nutrition and gender outcomes in the region The focus of this paper is on the health nutrition and gender linkage We find that to date few studies have analyzed the impact of irrigation interventions on nutrition health and women s empowerment despite the large potential of irrigation to affect these important variables Irrigation interventions may have differential effects on different members in the household and in the community such as irrigators non irrigators children and women Measuring and understanding such differences followed by improving design and implementation to maximize gender health and nutrition outcomes could transform irrigation programs from focusing solely on increased food production toward becoming an integral component of poverty reduction strategies      **Agriculture for improved nutrition: Seizing the momentum** Fan, Shenggen,Yosef, Sivan,Pandya-Lorch, Rajul,2019-02-28 Agriculture s vast potential to improve nutrition is just beginning to be tapped New ideas research and initiatives developed over the past decade have created an opportunity for reimagining and redesigning agricultural and food systems for the benefit of nutrition To support this transformation the book reviews the latest findings results from on the ground programs and interventions and recent policy experiences from countries around the world that are bringing the agriculture and nutrition sectors closer together Drawing on IFPRI s own
