Modern Dietary Fat Intakes in Disease Promotion Fabien De Meester, Sherma Zibadi, Ronald Ross Watson, 2010-06-07 The Nutrition and Health series of books have had great success because each volume has the consistent overriding mission of providing health professionals with texts that are essential because each includes 1 a synthesis of the state of the science 2 timely in depth reviews by the leading researchers in their respective elds 3 extensive up to date fully annotated ref ence lists 4 a detailed index 5 relevant tables and gures 6 identi cation of paradigm shifts and the consequences 7 virtually no overlap of information between chapters but targeted inter chapter referrals 8 suggestions of areas for future research and 9 balanced data driven answers

to patient as well as health professionals questions which are based upon the totality of evidence rather than the findings of any single study The series volumes are not the outcome of a symposium Rather each editor has the potential to examine a chosen area with a broad perspective both in subject matter and in the choice of chapter authors The editor s whose training is are both research and practice oriented have the opportunity to develop a primary objective for their book define the scope and focus and then invite the leading authorities to be part of their initiative The authors are encouraged to provide an overview of the field discuss their own research and relate the research findings to potential human health consequences

Feeding the World Vaclav Smil, 2001-08-24 A realistic yet encouraging look at how society can change in ways that will allow us to feed an expanding global population This book addresses the question of how we can best feed the ten billion or so people who will likely inhabit the Earth by the middle of the twenty first century He asks whether human ingenuity can produce enough food to support healthy and vigorous lives for all these people without irreparably damaging the integrity of the biosphere What makes this book different from other books on the world food situation is its consideration of the complete food cycle from agriculture to post harvest losses and processing to eating and discarding Taking a scientific approach Smil espouses neither the catastrophic view that widespread starvation is imminent nor the cornucopian view that welcomes large population increases as the source of endless human inventiveness He shows how we can make more effective use of current resources and suggests that if we increase farming efficiency reduce waste and transform our diets future needs may not be as great as we anticipate Smil s message is that the prospects may not be as bright as we would like but the outlook is hardly disheartening Although inaction late action or misplaced emphasis may bring future troubles we have the tools to steer a more efficient course There are no insurmountable biophysical reasons we cannot feed humanity in the decades to come while easing the burden that modern agriculture puts on the biosphere *Digestion* ,1991 **The American Journal of Clinical Nutrition** ,1993 *Hormones* ,1991 **Bibliography of Medical Reviews** ,1976 **Index of Conference Proceedings** ,1992 **Literature Search** National Library of Medicine (U.S.),1970 *Bibliography of Medical Reviews* National Library of Medicine (U.S.),1973 *Cumulated Index Medicus* ,1964
