Reading Lucretius in the Renaissance Ada Palmer, 2014-10-13 Ada Palmer explores how Renaissance poets and philologists not scientists rescued Lucretius and his atomism theory This heterodoxy circulated in the premodern world not on the conspicuous stage of heresy trials and public debates but in the classrooms libraries studies and bookshops where quiet scholars met transformative ideas *The Development of the Sciences* Ernest William Brown, Henry Andrews Bumstead, John Johnston, Frank Schlesinger, Herbert Ernest Gregory, 1923 Catalogue of Lewis's medical & scientific circulating Library H. K. Lewis and Company, 1908 **Mind, Brain, and Adaptation in the Nineteenth Century** Robert Maxwell Young, 1990 This is a reissue of a book published by the Clarendon Press in 1970 with a new introduction to take account of recent developments in the history of 19th century neuroscience The author examines ideas of the nature and localization of the functions of the brain in the light of the philosophical constraints at work in the sciences of mind and brain in the 19th century Particular attention is paid to phrenology sensory motor physiology associationist psychology and the theory of evolution as applied to the study of psychology The author argues that the methods and assumptions of modern science achieved apparent success in this domain at the expense of the biological approach which justified the integration of formerly disparate traditions The method of historical case study is used to illuminate the assumptions of current research

Victorian Popularizers of Science Bernard Lightman, 2009-10-15 The ideas of Charles Darwin and his fellow Victorian scientists have had an abiding effect on the modern world But at the time *The Origin of Species* was published in 1859 the British public looked not to practicing scientists but to a growing group of professional writers and journalists to interpret the larger meaning of scientific theories in terms they could understand and in ways they could appreciate Victorian Popularizers of Science focuses on this important group of men and women who wrote about science for a general audience in the second half of the nineteenth century Bernard Lightman examines more than thirty of the most prolific influential and interesting popularizers of the day investigating the dramatic lecturing techniques vivid illustrations and accessible literary styles they used to communicate with their audience By focusing on a forgotten coterie of science writers their publishers and their public Lightman offers new insights into the role of women in scientific inquiry the market for scientific knowledge tensions between religion and science and the complexities of scientific authority in nineteenth century Britain
