Excerpt from Laboratory Experiments in General Chemistry This manual is designed to cover a laboratory course in General Chemistry given in connection with a series of experimental lectures It contains five hundred carefully chosen experiments on the more common elements and is so arranged that it can be used in connection with any good text book The work includes a large number of experiments similar to those found in other manuals and in addition numerous more advanced experiments which to the author's knowledge have never before appeared in a laboratory manual in General Chemistry It is not supposed that any one student will perform all of these experiments The reason for the large Number is rather that experiments may be chosen to meet the needs of the various classes of students In the author's laboratory an assignment of experiments for each laboratory period is posted on the bulletin board A number of the simpler experiments are selected for the beginners while the more advanced and consequently more difficult exercises are assigned to those who have had previous chemical training In order to better facilitate this method of assignment all experiments have been numbered consecutively About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
