Placenta As A Model And A Source:

Placenta as a Model and a Source Olga Genbacev,Arnold Kloppe,Rebecca Beaconsfield,2012-12-06 The foreword to the book of a meeting is often an excuse for a paen of praise a homily or even an apologia and sometimes a combination of all three While certain traditions have been dispensed with in this volume the standard pattern for the foreword has its advantages so here at least tradition will be adhered to though in reverse order from that stated above It The apologia can be dismissed briefly for the editors have explained in their General Introduction that this is not the book of a meeting All that remains to be added here is a description of the modus operandi Being aware that speaking and writing are different activities requiring different presentation each participant was asked to prepare a script for publication resembling what he would speak about only in outline It may be that as a result the essays lack detail and are thin under some of the classical headings of scientific writing So the reader in turn is asked to accept this and give his attention instead to the concepts and ideas contained therein It may even come about that this kind of presentation will in the end result in something less ephemeral than the standard conference proceedings book Criticism of conference proceedings and the type of meetings that give rise to these little loved tomes is not a new phenomenon *Placental Toxicology* B. begins with the recognition and fusion of gametes of both sexes followed by a series of mitotic cell divisions. The gamete fusion results in the formation of totipotent cells which are capable of developing into three basic cell lineages in mammals. These include the trophoblast surrounding the embryo and facilitating communication with the mother, the epiblast which develops into the fetus, and the primitive endoderm which forms the yolk sac. Until implantation, the embryos undergo remarkable changes including histone modifications, chromatin remodeling, epigenetic modifications of chromatin, the onset of transcription from the embryonic genome, and the first differentiation to the formation of the trilaminar disc containing all primary cell lineages required for the formation of fetal tissues and organs. Remarkably, some of the most complex events of early development, such as fertilization, are achieved during complete transcriptional silencing. Another unique feature is how fast the development proceeds. In humans, reaching the stage of early gastrulation takes approximately two weeks.

Reproductive and Developmental Toxicology Ramesh C. Gupta, 2022-02-11. Selected for Doody's Core Titles 2024 in Toxicology. Reproductive and Developmental Toxicology Third Edition is a comprehensive and authoritative resource providing the latest literature on this complex subject by focusing on three core components: parent, placenta, and fetus, and the continuous changes that occur in each. Enriched with relevant references describing every aspect of reproductive toxicology, this revised and updated resource addresses the totality of the subject, discussing a broad range of topics including nanoparticles and radiation, gases and solvents, smoking, alcohol, and drugs of abuse, and metals, among others. In addition, it is the only resource to include reproductive and developmental toxicity in domestic animals, fish, and wildlife. With a special focus on placental toxicity, this book is the only available reference to connect the three key risk stages. Completely revised and updated to include the most recent developments in the field, this book is an essential resource for advanced students and researchers in toxicology, as well as biologists, pharmacologists, and teratologists from academia, industry, and regulatory agencies. Provides a complete, up-to-date, integrated source of information on the key risk stages during reproduction and development. Offers diverse and unique *in vitro* and *in vivo* toxicity models for reproductive and developmental toxicity testing in a user-friendly format that assists in comparative analysis. Includes new chapters on developments in systems toxicology and predictive modeling of male developmental toxicity, adverse outcome pathways in reproductive and developmental toxicology, ovarian and endometrial toxicity, developmental neurotoxicity of air pollution, and more.
