Placing Autobiography In Geography:

Placing Autobiography in Geography Pamela Moss, 2001-01-01 Chronicling the history of geography entails not only the literature emerging from geographers pens and printers but also the geographers themselves Why and how geographers have taken the career paths they have taken is as much importance as their scholarly output The contributors use autobiography as a tool to document the history of geography as a method of data collection or as a mode of analysis Taken together their work provides empirical examples of the ways geographer are engaging the critical questions raised by the changes in their field Handbook on the Geographies of Power Mat Coleman, John Agnew, 2018-07-27 The so called spatial turn in the social sciences means that many researchers have become much more interested in what can be called the spatialities of power or the ways in which power as a medium for achieving goals is related to where it takes place Most famous authors on the subject such as Machiavelli and Hobbes saw power as entirely equivalent to domination exercised by some over others Though this meaning is hardly redundant understandings of power have become more multidimensional and nuanced as a result of the spatial turn Much recent writing in human geography for example has rigorously extended use of the term power beyond its typical understanding as a resource that pools up in some hands and some places to a medium of agency that has different effects depending on how it is deployed across space and how actors cooperate or not to give it effect To address this objective the book is organized thematically into four sections that cover the main areas in which much of the contemporary work on geographies of power is concentrated bodies economy environment and energy and war

Fenton, Jamie Baxter, 2016-07-15 Health geographers are increasingly turning to a diverse range of interpretative methodologies to explore the complexities of health illness space and place to gain more comprehensive understandings of well being and broader social models of health and health care Drawing upon postmodernism many health geographers are concerned with issues of representation the body and health care policy Also related to an emphasis on the body is the growing literature in feminist health geography that investigates the metaphorical physical and emotional challenges of the body and disease Reflecting these interests the chapters in this book set out the host of creative qualitative methods being used to explore the psychosocial experiences of individuals more directly using such traditional methods as in depth

interviews and group discussions participant observation diaries and discourse analysis but also more novel techniques such as go along interviews reflexive writing illustrations and photographic techniques There are several areas of qualitative research unique to geographers which figure prominently in this volume including health and place comparative case study analysis and qualitative approaches to the use of geographic information systems GIS This collection brings together a wide range of empirical concerns related to questions of health and shines a light on the diversity of qualitative methods in practice Illustrating how qualitative methodologies are used in diverse health contexts this book fills an important niche for health geographers but will have wide appeal to health and geographic researchers
