Plane Ellipticity and Related Problems Robert P. Gilbert, 1982-12-31 Algebraists' Homage: Papers in Ring Theory and Related Topics Shimshon A. Amitsur, David J. Saltman, George B. Seligman, 1982 Symposium on Algebraic Topology in Honor of Jose Adem Samuel Gitler, 1982 **Azumaya Algebras, Actions, and Modules** Darrell Haile, 1992 This volume contains the proceedings of a conference in honor of Goro Azumaya's seventieth birthday held at Indiana University of Bloomington in May 1990. Professor Azumaya, who has been on the faculty of Indiana University since 1968, has made many important contributions to modern abstract algebra. His introduction and investigation of what have come to be known as Azumaya algebras subsequently stimulated much research on such rings and algebras as well as applications to geometry and number theory. In addition to honoring Professor Azumaya's contributions, the conference was intended to stimulate interaction among three areas of his research interests: Azumaya algebras, group and Hopf algebra actions, and module theory. Aimed at researchers in algebra, this volume contains contributions by some of the leaders in these areas. Proceedings of the Northwestern Homotopy Theory Conference Haynes R. Miller, Stewart Priddy, 1983 *Multiparameter Bifurcation Theory* Martin Golubitsky, John Guckenheimer, American Mathematical Society, 1986 This 1985 AMS Summer Research Conference brought together mathematicians interested in multiparameter bifurcation with scientists working on fluid instabilities and chemical reactor dynamics. This proceedings volume demonstrates the mutually beneficial interactions between the mathematical analysis based on genericity and experimental studies in these fields. Various papers study steady state bifurcation, Hopf bifurcation to periodic solutions, interactions between modes, dynamic bifurcations, and the role of symmetries in such systems. A section of abstracts at the end of the volume provides guides and pointers to the literature. The mathematical study of multiparameter bifurcation leads to a number of theoretical and practical difficulties, many of which are discussed in these papers. The articles also describe theoretical and experimental studies of chemical reactors which provide many situations in which to test the mathematical ideas. Other test areas are found in fluid dynamics, particularly in studying the routes to chaos in two laboratory systems: Taylor-Couette flow between rotating cylinders and Rayleigh-Bénard convection in a fluid layer. *Chapter 9 of Ramanujan's Second Notebook: Infinite Series Identities, Transformations, and Evaluations* Bruce C. Berndt, Padmini T. Joshi, 1983 **Notices of the American Mathematical Society** American Mathematical Society, 1984 Contains articles of significant interest to mathematicians, including reports on current mathematical research. **Enumerative Algebraic Geometry** Steven L. Kleiman, Anders Thorup, 1991 1989 marked the 150th anniversary of the birth of the great Danish mathematician Hieronymus George Zeuthen. Zeuthen's name is known to every algebraic geometer because of his discovery of a basic invariant of surfaces. However, he also did fundamental research in intersection theory, enumerative geometry, and the projective geometry of curves and surfaces. Zeuthen's extraordinary devotion to his subject, his characteristic depth, thoroughness, and clarity of thought, and his precise and succinct writing style

are truly inspiring During the past ten years or so algebraic geometers have reexamined Zeuthen's work drawing from it inspiration and new directions for development in the field The 1989 Zeuthen Symposium held in the summer of 1989 at the Mathematical Institute of the University of Copenhagen provided a historic opportunity for mathematicians to gather and examine those areas in contemporary mathematical research which have evolved from Zeuthen's fruitful ideas This volume containing papers presented during the symposium as well as others inspired by it illuminates some currently active areas of research in enumerative algebraic geometry *Computational Modelling of Free and Moving Boundary Problems: Fluid flow* C. A. Brebbia, 1991 *Low Dimensional Topology* American Mathematical Society, 1983 Derived from a special session on Low Dimensional Topology organized and conducted by Dr Lomonaco at the American Mathematical Society meeting held in San Francisco California January 7-11 1981 **Value Distribution Theory and Its Applications** Chung-Chun Yang, 1983
