Feigelson,Jogesh Babu,2012-08-15 This volume contains a selection of chapters based on papers to be presented at the Fifth Statistical Challenges in Modern Astronomy Symposium The symposium will be held June 13 15th at Penn State University Modern astronomical research faces a vast range of statistical issues which have spawned a revival in

methodological activity among astronomers The Statistical Challenges in Modern Astronomy V conference will bring astronomers and statisticians together to discuss methodological issues of common interest Time series analysis image analysis Bayesian methods Poisson processes nonlinear regression maximum likelihood multivariate classification and wavelet and multiscale analyses are all important themes to be covered in detail Many problems will be introduced at the conference in the context of large scale astronomical projects including LIGO AXAF XTE Hipparcos and digitized sky surveys

Advances in Machine Learning and Data Mining for Astronomy Michael J. Way, Jeffrey D. Scargle, Kamal M. Ali, Ashok N. Srivastava, 2012-03-29 Advances in Machine Learning and Data Mining documents numerous successful collaborations among computer scientists statisticians and astronomers who illustrate the application of state of the art machine learning and data mining techniques in astronomy Due to the massive amount and complexity of data in most scientific disciplines the material discussed in this text transcends traditional boundaries between various areas in the sciences and computer science The book's introductory part provides context to issues in the astronomical sciences that are also important to health social and physical sciences particularly probabilistic and statistical aspects of classification and cluster analysis The next part describes a number of astrophysics case studies that leverage a range of machine learning and data mining technologies In the last part developers of algorithms and practitioners of machine learning and data mining show how these tools and techniques are used in astronomical applications With contributions from leading astronomers and computer scientists this book is a practical guide to many of the most important developments in machine learning data mining and statistics It explores how these advances can solve current and future problems in astronomy and looks at how they could lead to the creation of entirely new algorithms within the data mining community
