What was the session about?	Today we learnt about power surrounding the law and criminology and how they ultimately link. We went into detail about different statuses in society and how people are treated differently in society because of things like class, ethnicity and gender. We watched a video that was explaining how poor the policing in India is because of the 'class' system and how many children go missing under horrific circumstances
How has this added to your knowledge of the topic?	This furthered my knowledge as I have learnt a lot about power statuses in society, and how different classes for example are treated differently to one another, especially when it comes to street crime against white collar crime.
How has this added to your skills development? Which skills have you used / developed?	My communication skills were improved in this session due to group work and as a result of this I also had to do a lot of note taking and researching methods as I had to do a lot of reading into this topic.
How can you follow-up on this topic, and continue to develop your skills?	I can follow up on this session by researching further and reading articles and things about it to further my understanding

Geometric Algebra with Applications in Engineering Christian Perwass, 2009-02-11 The application of geometric algebra to the engineering sciences is a young active subject of research. The promise of this field is that the mathematical structure of geometric algebra together with its descriptive power will result in intuitive and more robust algorithms. This book examines all aspects essential for a successful application of geometric algebra: the theoretical foundations, the representation of geometric constraints and the numerical estimation from uncertain data. Formally, the book consists of two parts: theoretical foundations and applications. The first part includes chapters on random variables in geometric algebra, linear estimation methods that incorporate the uncertainty of algebraic elements and the representation of geometry in Euclidean, projective, conformal and conic space. The second part is dedicated to applications of geometric algebra which include uncertain geometry and transformations, a generalized camera model and pose estimation. Graduate students, scientists, researchers and practitioners will benefit from this book. The examples given in the text are mostly recent research results so practitioners can see how to apply geometric algebra to real tasks while researchers note starting points for future investigations. Students will profit from the detailed introduction to geometric algebra while the text is supported by the author's visualization software CLUCalc, freely available online, and a website that includes downloadable exercises, slides and tutorials.
